EARTH SYSTEM SCIENCE

A VERY SHORT INTRODUCTION

Oxford University Press When humanity first glimpsed planet Earth from space, the unity of the system that supports humankind entered the popular consciousness. The concept of the Earth's atmosphere, biosphere, oceans, soil, and rocks operating as a closely interacting system has rapidly gained ground in science. This new field, involving geographers, geologists, biologists, oceanographers, and atmospheric physicists, is known as Earth System Science. In this Very Short Introduction, Tim Lenton considers how a world in which humans could evolve was created; how, as a species, we are now reshaping that world; and what a sustainable future for humanity within the Earth System might look like. Drawing on elements of geology, biology, chemistry, physics, and mathematics, Lenton asks whether Earth System Science can help guide us onto a sustainable course before we alter the Earth system to the point where we destroy ourselves and our current civilisation. **ABOUT THE SERIES:** The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

EXPLORING THE UNIVERSE

INNOVATIVE LEARNING GEOGRAPHY IN EUROPE

NEW CHALLENGES FOR THE 21ST CENTURY

Cambridge Scholars Publishing **Opportunities for developing innovative approaches in teaching and learning geography have been rapidly increasing in recent years. This is in part because of the spread of new technologies that allow access to geographic information and geographic geo-media resources. These new tools offer broad access to information and open data sources. They have revolutionised the way in which teachers of geography can work with pupils and students. “Education for Digital Earth” is now possible. As such, the exclusive use of traditional approaches to the teaching of geography is no longer reasonable today. The European Commission-funded network initiative, digital-earth.eu, promotes innovation and best practices in the implementation of geo-media as a digital learning environment for school learning and teaching. This book, supported by EUROGEO, analyses the main challenges facing geographical education - curriculum, methodology, teacher education and training and geospatial technologies - and**

illustrates different examples of the use of geoinformation in geographical education in several European countries.
