International Perspectives on Household Wealth

Edward Elgar Publishing Editor Wolff is a leading authority on income, wealth, and inequality in the US, and contributing authors are well-respected experts in their field. Overall, the research is high quality, and most papers include a substantial list of references. A plethora of data is considered, and much statistical evidence is presented. . . . A useful contribution to the literature on income distribution and wealth inequality. Recommended. E. Kacapyr, *Choice* The contributors to this comprehensive book compile and analyse the latest data available on household wealth using, as case studies, the United States, Canada, Germany, Italy, Sweden, and Finland during the 1990s and into the twenty-first century. The authors show that in the US, trends are highlighted in terms of wealth holdings, among the low-income population, along with changes in wealth

polarization, racial differences in wealth holdings, and the dynamics of portfolio choices. The consensus between the authors is that wealth inequality has generally risen among these OECD countries since the early 1980s, although Germany stands out as an exception. In the case of the US, it is also noted that wealth holdings have generally failed to improve among low-income families and that the racial wealth gap widened during the late 1980s. *International Perspectives on Household Wealth* also contains new results on a number of topics, including measures and changes of wealth polarization in the US, measurement and changes of portfolio span in the US, asset holdings of low-income households in the US, and the effects of parental resources on asset holdings in Chile. Academic, government, and public policy economists in OECD countries, as well as those in so-called middle-income countries around the world, will find much to engage them within this book. It will also appeal to academics and researchers of international and welfare economics and other social scientists interested in the issue of inequality.

Annual Energy Outlook

Assets for the Poor

The Benefits of Spreading Asset Ownership

Russell Sage Foundation Over the past three decades, average household wealth in the United States has declined among all but the richest families, with a near 80 percent drop among the nation's poorest families. Although the national debate about inequality has focused on income, it is wealth—the private assets amassed and passed on within families—that provides the extra economic cushion needed to move beyond mere day-to-day survival. *Assets for the Poor* is the first full-scale investigation into the importance of family wealth and the need for policies to encourage asset-building among the poor. *Assets for the Poor* shows how institutional mechanisms designed to encourage acquisition of capital and property favor middle-class and high-income families. For example, the aggregate value of home mortgage tax deductions far outweighs the dollar amount of the subsidies provided by Section 8 rental vouchers and public housing. Banking definitions of creditworthiness largely exclude minorities, and welfare rules have made it nearly impossible for single mothers to accumulate savings, let alone stocks or real estate. Due to persistent residential segregation, even those minority families who do own homes are often denied equal access to better schools and public services. The research in this volume shows that the poor do make use of the assets

they have. Cash gifts—although small in size—are frequent within families and often lead to such positive results as homebuying and debt reduction, while tangible assets such as tools and cars help increase employment prospects. *Assets for the Poor* examines policies such as Individual Development Account tax subsidies to reward financial savings among the poor, and more liberal credit rules to make borrowing easier and less costly. The contributors also offer thoughtful advice for bringing the poor into mainstream savings institutions and warn against developing asset building policies at the expense of existing safety net programs. Asset-building for low-income families is a powerful idea that offers hope to families searching for a way out of poverty. *Assets for the Poor* challenges current thinking regarding poverty reduction policies and proposes a major shift in the way we think about families and how they make a better life. A Volume in the Ford Foundation Series on Asset Building

Schooling for Success: Preventing Repetition and Dropout in Latin American Primary Schools

Preventing Repetition and Dropout in Latin American Primary Schools

Routledge The link between economic development and education in Latin America is generally well-recognized. A literate and educated work force is the largest single factor in explaining economic growth. In this study, the editors and contributors survey the various elementary educational systems to investigate the reasons behind the failure of schools to retain students in elementary grades. A group of scholars looks at the current state of education in four countries: Mexico, Argentina, Brazil, and Chile, with a view to designing more effective programs for reducing the dropout and grade repetition rates. For each country studied, there is an overview of the school system, teacher training and attitudes, centralized and decentralized planning, curriculum development, and psychological and

environmental issues that contribute to school dropout.

The Extent of Marketization of
Economic Systems in China

Nova Publishers China's economy is currently undergoing double transformations or transitions: the system pattern is being transformed from central-planned economy into a market economy, and the development frame is changing from a low-income type to a middle-income type. That the double transition take place simultaneously in a developing and socialist country, China, is quite significant for the whole world. People try to understand in what way and to what degree the current development is different from traditional China; and how it is associated with the roads that developed countries have passed. This book centres on the transformation to an economic system pattern. It endeavours to define the transformation extent of China's economic system pattern up to now and to measure the paces of marketisation progress. The stages and features of China's economic system reform are described as well as the features of the target pattern. Then the implications and features of marketisation are elucidated because they are the basis for the design of the measurement indicators.

The Education of Richard Riley

A Case Study of Business Involvement in Education

AuthorHouse Prior to 1983, South Carolinas public education system was ranked 49th out of the fifty states in terms of standardized testing, school funding, parental involvement and other measured criteria. With several corporations moving their corporate headquarters and manufacturing facilities into the state, South Carolinas weak public school system came to the forefront as a major concern in the states efforts to draw in businesses. In 1983, South Carolina installed a Business Education Partnership program (BEP) to monitor its public school system to improve teacher quality, student testing and school funding. This book chronicles these efforts under the leadership of Richard Riley who was South Carolinas governor at the time. During his reign from 1983 through 1989, Riley worked with the CEOs of major companies, school superintendents, politicians and the community to promote the BEP program. Rileys vibrant role was crucial in building and sustaining the success of the BEP and in highlighting public interest in school reform. Under Rileys leadership, South Carolinas public school system enjoyed significant improvement that has remained unmatched till this day. In this well-researched work, the success of the BEP program under Riley is documented as well as the programs eventual downfall after Rileys departure from office.
