## **DIVERGING PATHWAYS**

---

---

### **SOCIAL STRUCTURE AND CAREER DEFLECTIONS**

---

*Cambridge University Press Social arrangements of society's institutions deflect people's achievement patterns. Some schools take only talented students, others take the rest; within schools, students are separated into ability groups. Firms are in different industries and vary in size. During their educational and work careers, people get sorted into these different locations. Diverging Pathways examines that sorting process and shows how it affects people's achievements. Some locations accelerate achievements, others depress them - in elementary, secondary, and postsecondary school programs, and in the labor force. Most important, some people are consistently in the same kinds of locations, repeatedly advantaged or disadvantaged, especially in school. They end up far apart as adults, due in large part to the cumulative effects of the social arrangements they passed through. Diverging Pathways follows the members of a 1958 British birth cohort for the first twenty-three years of their lives. It presents a detailed picture of their family backgrounds and their school and early labor force experiences and achievements. Besides the cumulative effects of institutional locations, it shows major career differences of men and women, and it describes how the interface between postsecondary education and the labor force alters some of the outcomes of elementary and secondary schooling.*

## **THE HEAVENLY ROSE-GARDEN**

---

### **A HISTORY OF SHIRVAN & DAGHESTAN**

---

*Mage Pub* The Heavenly Rose-Garden is a fascinating portrait of the Caucasus at the dawn of the modern era. Written in Persian and completed in 1845, it offered the first look at the region by a native son, 'Abbas Qoli Aqa Bakikhanov. It remains the only dedicated history of Shirvan and Daghestan to this day and also contains a great deal of interesting information about the Caucasus in general during the eighteenth and nineteenth centuries. Bakikhanov demonstrates that despite differences in language, religion, and ethnicity, all the peoples of the Caucasus traveled a similar historical road and, to some extent, shared an identity distinct from the Ottoman Turks and Persians of adjacent, larger states. Translated for the first time into English by two eminent historians, The Heavenly Rose-Garden is a mine of information for scholars studying the region and an engrossing read for anyone else. 'Abbas Qoli Aqa Bakikhanov was an Azerbaijani journalist, linguist, poet and philosopher. A scion of the Khan of Baku, he was born there in 1794. From 1820 to 1845 he served as a secretary and translator in the Russian army, which had taken over most of the Caucasus in previous decades. Throughout this time he traveled widely, carried out ethnographic studies and kept his ties with the literary establishment of the Caucasus, centered in Tiflis in present-day Georgia. He died in 1847. Willem Floor has published numerous works of history as well as translations. Among them: *Public Health in Qajar Iran*; *Agriculture in Qajar Iran*; *The History of Theater in Iran*; *The Persian Gulf: A Political and Economic History of Five Port Cities*; *The Persian Gulf: The Rise of the Gulf Arabs*; *Samuel Gottlieb Gmelin's Travels Through Northern Persia 1770-1774*, and his most recent book, *A Social History of Sexual Relations in Iran*. Hasan Javadi is the author or translator of many books,

*including Satire in Persian Literature; Persian Literary Influence on English Literature; Forough Farrokhzad's Another Birth and Other Poems; and in Persian, European Travelers in Iran. Retired from Cambridge and Berkeley, Dr. Javadi has recently published a translation of the work of Obeyd-e Zakani, Ethics of Aristocrats and other Satirical Stories, and edited Letters from Tabriz by E. G. Browne.*

## **INTRODUCTION TO ANALYTICAL DYNAMICS**

---

Oxford University Press, USA This book is an introduction to Lagrangian and Hamiltonian mechanics primarily for mathematics undergraduates. Although the approach is traditional and coordinate based, it incorporates some of the insights and new perspectives of modern geometric treatments of mechanics. The book is intended for advanced undergraduates or graduate students and assumes familiarity with linear algebra, the chain rule for partial derivatives, and (to a lesser extent) three-dimensional vector mechanics. The aims are to give a confident understanding of the chain of argument that leads from Newton's laws through Lagrange's equations and Hamilton's principle to Hamilton's equations and canonical transformations; to confront head-on the points that mathematicians in particular find most awkward and confusing; to give practice in problem solving; and to elucidate the techniques that will reappear in later courses on relativity and quantum theory.

## **ADVANCED PROBLEMS IN MATHEMATICS**

---

---

## **PREPARING FOR UNIVERSITY**

---

*This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. ### **OBEDIENCE TO AUTHORITY**

---

*HarperCollins* A part of Harper Perennial's special "Resistance Library" highlighting classic works that illuminate our times: A special edition reissue of Stanley Milgram's landmark examination of humanity's susceptibility to authoritarianism. "The classic account of the human tendency to follow orders, no matter who they hurt or what their consequences." — Washington Post Book World In the 1960s, Yale University psychologist Stanley Milgram famously carried out a series of experiments that forever changed our perceptions of morality and free will. The subjects—or "teachers"—were instructed to administer electroshocks to a human "learner," with the shocks becoming progressively more powerful and painful. Controversial but now strongly vindicated by the scientific community, these experiments attempted to determine to what extent people will obey orders from authority figures regardless of consequences. "Milgram's experiments on obedience have made us more aware of the dangers of uncritically accepting authority," wrote Peter Singer in the New York Times Book Review. With an introduction from Dr. Philip Zimbardo, who conducted the famous Stanford Prison Experiment, *Obedience to Authority* is Milgram's fascinating and troubling chronicle of his classic study and a vivid and persuasive explanation of his conclusions.
