INVENTING THE FUTURE

POSTCAPITALISM AND A WORLD WITHOUT WORK

Verso Books A major new manifesto for the end of capitalism Neoliberalism isn't working. Austerity is forcing millions into poverty and many more into precarious work, while the left remains trapped in stagnant political practices that offer no respite. Inventing the Future is a bold new manifesto for life after capitalism. Against the confused understanding of our high-tech world by both the right and the left, this book claims that the emancipatory and future-oriented possibilities of our society can be reclaimed. Instead of running from a complex future, Nick Srnicek and Alex Williams demand a postcapitalist economy capable of advancing standards, liberating humanity from work and developing technologies that expand our freedoms. This new edition includes a new chapter where they respond to their various critics.

EMERGENCY RESPONSE GUIDEBOOK

A GUIDEBOOK FOR FIRST RESPONDERS DURING THE INITIAL PHASE OF A DANGEROUS GOODS/HAZARDOUS MATERIALS TRANSPORTATION INCIDENT

Simon and Schuster Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. NORMAL ACCIDENTS

LIVING WITH HIGH RISK TECHNOLOGIES - UPDATED EDITION

Princeton University Press Normal Accidents analyzes the social side of technological risk. Charles Perrow argues that the conventional engineering approach to ensuring safety--building in more warnings and safeguards--fails because systems complexity makes failures inevitable. He asserts that typical precautions, by adding to complexity, may help create new categories of accidents. (At Chernobyl, tests of a new safety system helped produce the meltdown and subsequent fire.) By recognizing two dimensions of risk--complex versus linear interactions, and tight versus loose coupling--this book provides a powerful framework for analyzing risks and the organizations that insist we run them. The first edition fulfilled one reviewer's prediction that it "may mark the beginning of accident research." In the new afterword to this edition Perrow reviews the extensive work on the major accidents

of the last fifteen years, including Bhopal, Chernobyl, and the Challenger disaster. The new postscript probes what the author considers to be the "quintessential 'Normal Accident'" of our time: the Y2K computer problem.

MORAL DILEMMAS OF MODERN WAR

TORTURE, ASSASSINATION, AND BLACKMAIL IN AN AGE OF ASYMMETRIC CONFLICT

Cambridge University Press Asymmetric conflict is changing the way that we practice and think about war. Torture, rendition, assassination, blackmail, extortion, direct attacks on civilians, and chemical weapons are all finding their way to the battlefield despite long-standing prohibitions. This book offers a practical guide for policymakers, military officers, lawyers, students, journalists and others who ask how to adapt the laws and conventions of war to the changing demands of asymmetric conflict. As war wages between state and nonstate parties, difficult questions arise about the status of guerrillas, the methods each side may use to disable the other and the means necessary to identify and protect civilians caught in the crossfire. Answering these questions while providing each side a reasonable chance to press its claims by force of arms requires us to reevaluate the principle of noncombatant immunity, adjust the standards of proportionality, and redefine the limits of unnecessary suffering and superfluous injury. In doing so, many practices that conventional war prohibits are slowly evolving into new norms of asymmetric conflict.

THE SWEETPOTATO

Springer Science & Business Media In the last four decades of the twentieth century the use of sweetpotato was diversified beyond their classification as subsistence, food security, and famine-relief crop. In developing countries they serve both as human food and for feeding livestock. In Western countries they appeal to health conscious consumers because of their nutritional aspects. The sweetpotato is very high in nutritive value, and merits wider use on this account alone. The book has 2 parts. A general one giving up-to-date information on the history, botany, cultivars, genetic engineering, propagation, diseases and pests, nutritional data and marketing; and a second part presenting data on sweetpotato growing practices in different areas of the world. The information should be useful to researchers, practitioners and crop administrators in different countries.

You'll use it as a survey of the field, you'll use it to explore a particular subject, but most of all you'll use The Civil Engineering Handbook to answer the problems, questions, and conundrums you encounter in practice.

APPROACHES FOR ASSESSING THE ECONOMIC COMPETITIVENESS OF SMALL AND MEDIUM SIZED REACTORS

This report was prepared with the following objectives: (i) to assist existing and potential stakeholders in Member States in understanding the economic competitiveness of small and medium sized reactor (SMR) technologies compared to other energy sources and large reactors (LRs); (ii) to inform

available approaches and frameworks to assess the economic competitiveness of advanced SMRs and LRs under specific conditions of their application; and (iii) to share knowledge on positive experiences of several Member States that have introduced SMRs into their energy mix. To make SMRs attractive and competitive, it is necessary to reduce the risk of investment by verifying the technology itself, and by enhancing and incorporating the accumulated experience associated with the implementation of this technology. To satisfy these criteria, it may be necessary to offer those SMR technologies that are currently implemented widely, and already have a track record of success and a developed industrial infrastructure. Newer SMR technologies may need to be deployed first to niche markets in the nuclear power plant supplier countries in order to establish a technological base and related infrastructure prior to offering them to developing countries.
