This book has been written with a view to bring out India being the oldest civilized nation of the world. It would be demeaning the country to call it only a fifty-year-old independent country when we have been independent for lacs and crores of years, except for a small period of 140 years of British regime. The Muslim rule of about six hundred years has been taken as independent period because during this period, Muslim rulers were sovereign, independent Indian rulers rather than under any foreign power. And most of the kings were born and brought up in India and imbibed with Bhartiyata. It was the British who ruled India as a colony only, bracketing us with the newly found lands of America, Africa, and Australia; whereas, we had been the most advanced, most educated, and richest country of the world in the past, particularly during the Maurya, Gupta, and Mughal periods. Tracing the concept of independent India, this book has taken the shape of Indias full history, with specific reference to the theme of independence through ages, since vedas. **Indian Journal of History of Science Business Laws Text and Problems Sage Publications Pvt. The models and methods adopted in the Indian context appear, at first sight, similar to those in other common law systems. Yet there are many subtle differences which have changed the structure and content of legal development in India. Indian environmental jurisprudence brings out the unique characteristics of a new legal order which has gradually been established in India. The distinguishing nature of this jurisprudence, as this book shows in detail, has three interconnected elements. First, the nature of the new Indian constitutional law regime accords greater importance to public concerns than protecting private interests. Secondly, this jurisprudential development reflects certain aspects of Indian legal culture, through implicit and explicit reliance on autochthonous values and concepts of law, encapsulated in the Indian juristic postulate of "dharma." Thirdly, the emerging Indian environmental jurisprudence bears testimony to the activist role of the Indian judiciary which has also had a significant impact in many areas other than environmental law. In short, the development of environmental jurisprudence in India manifests neo-"dharmic" jurisprudence in postmodern public law. It accommodates ideas currently voiced by experts around the world for protecting the environment in forms modified by the Indian legal culture. **Mycology and Microbiology (A Textbook for UG and PG Courses) Scientific Publishers** Fungi and microbes have predominant influence in our lives. They are directly or indirectly involved in generating the food we eat and drink, besides providing life saving pharmaceutical products, including the sources of enzymes. They play a vital role in recycling of organic matter and several ecological processes. Both fungi and microbes have contributed several billion dollars worth of technological products. For instance: yeast is used in brewing and bakery, Lactobacillus ferments milk to yoghurt and a number of edible mushrooms are rich in nutrients besides possessing many medicinal properties. Bacteria and fungi serve as key organisms in understanding life processes, genetic engineering and as experimental organisms. Therefore, it is necessary to study the biology and biotechnology of these organisms. It is a humble attempt of the authors to make the readers understand the biology and biotechnology of fungi and microbes in a simpler way and also to communicate the recent developments. **History of Printing and Publishing in India A Story of Cultural Re-awakening History of Technology in India: From 1801 to 1947 A.D** Contributed articles. **THE DYNAMIC EARTH SYSTEM, Fourth Edition PHI Learning Pvt. Ltd.** Addressed to the undergraduate and postgraduate students pursuing studies in the broad interdisciplinary field of Earth Science, this thoroughly revised book, in its Fourth Edition, is aimed at facilitating the comprehension between the pre-planetary history and the subsequent geological processes of the Earth system. This is done keeping in mind the current interest in exoplanets and the evolution of the life supporting crustal composition of the Earth, much different from that of the other planets, in terms of the Earth's internal heat, density distribution and the strong magnetic field due to the dominant presence of metallic Fe in its core. The new edition draws the attention of the reader to the different surface gravity features and the internal compositional structures of the Earth, Moon and the Sun acquired during the Hadean. Examples of lithospheric movements, rifting, subduction and the continued mantle-crust interaction from Indian and Southeast Asian geology would bring the readers close to interlinking these tectonic processes to the genesis of igneous, sedimentary and metamorphic rocks as well as to the episodes of mineralizations. Emphasizing these dynamic processes, the text focuses on the constitution of oceans, the causes of mass extinctions and the evolution of life forms, the biogeochemical cycles of elements, and also, on the life protecting ozone layer of the stratosphere, all unique to the Earth System. The student is sensitized towards the natural hazards of frequent volcanic eruptions, earthquakes, tsunamis, floods, and climate change besides explicating the threats posed by global warming, atmospheric and hydrosphere pollution, caused by the industrial emanations and indiscrete waste disposal. **KEY FEATURES** • Each chapter is replete with examples, illustrations, tables and figures to make reading more fruitful and enriching. • Chapter-end summary helps in recapitulation of the concepts discussed. • Additional Reading provided at the end of each chapter directs the readers to the vast source of information. **NEW TO THE FOURTH EDITION** Considering the growing global interest in locating a habitable exoplanet like the Earth, and in exploring the Moon and the Mars, the present edition thoroughly updates the information about • the geochemical processes, unique to the Earth System, that gave rise to the life supportive crust, oceans and the atmosphere. • the role played by plate tectonics in forming the igneous, sedimentary and metamorphic rocks, mineral deposits, and also, in the evolution of life. • the geo-environmental hazards of volcanic eruptions, earthquakes, floods, tsunamis, droughts and desertification. • the growing adoption of solar, hydro, wind and nuclear energy in power generation, and in management of clean environment. **TARGET AUDIENCE** • M.Sc.
