Category / Definition / Approximate Percentage of Questions STUDYING FOR THE SAT II: MATH LEVEL IIC It is very important to choose the time and place for studying that works best for you. Some students may set aside a certain number of hours every morning to study, while others may choose to study at night before going to sleep. Other students may study during the day, while waiting on line, or even while eating lunch. Only you can determine when and where your study time will be most effective. Be consistent and use your time wisely. Work out a study routine and stick to it! When you take the practice tests, try to make your testing conditions as much like the actual test as possible. Turn your television and radio off, and sit down at a quiet desk or table free from distraction. Make sure to clock yourself with a timer. As you complete each practice test, score it and thoroughly review the explanations to the questions you answered incorrectly; however, do not review too much at any one time. Concentrate on one problem area at a time by reviewing the questions and explanations, and by studying our review until you are confident you completely understand the material. Keep track of your scores. By doing so, you will be able to gauge your progress and discover general weaknesses in particular sections. You should carefully study the reviews that cover your areas of difficulty, as this will build your skills in those areas. TEST TAKING TIPS Although you may be unfamiliar with standardized tests such as the SAT II: Math Level IIC Subject Test, there are many ways to acquaint yourself with this type of examination and help alleviate your test-taking anxieties. Become comfortable with the format of the exam. When you are practicing to take the SAT II: Math Level IIC Subject Test, simulate the conditions under which you will be taking the actual test. Stay calm and pace yourself. After simulating the test only a couple of times, you will boost your chances of doing well, and you will be able to sit down for the actual exam with much more confidence. Know the directions and format for each section of the test. Familiarizing yourself with the directions and format of the exam will not only save you time, but will also ensure that you are familiar enough with the SAT II: Math Level IIC Subject Test to avoid nervousness (and the mistakes caused by being nervous). Do your scratchwork in the margins of the test booklet. You will not be given scrap paper during the exam, and you may not perform scratchwork on your answer sheet. Space is provided in your test booklet to do any necessary work or draw diagrams. If you are unsure of an answer, guess. However, if you do guess - guess wisely. Use the process of elimination by going through each answer to a question and ruling out as many of the answer choices as possible. By eliminating three answer choices, you give yourself a 50/50 chance of answering correctly since there will only be two choices left from which to make your guess. Mark your answers in the appropriate spaces on the answer sheet. Each numbered row will contain five ovals corresponding to each answer choice for that question. Fill in the oval that corresponds to your answer darkly, completely, and neatly. You can change your answer, but remember to completely erase your old answer. Any stray lines or unnecessary marks may cause the machine to score your answer incorrectly. When you have finished working on a section, you may want to go back and check to make sure your answers correspond to the correct questions. Marking one answer in the wrong space will throw off the rest of your test, whether it is graded by machine or by hand. You don't have to answer every question. You are not penalized if you do not answer every question. The only penalty results from answering a question incorrectly. Try to use the guessing strategy, but if you are truly stumped by a question, remember that you do not have to answer it. Work quickly and steadily. You have a limited amount of time to work on each section, so you need to work quickly and steadily. Avoid focusing on one problem for too long. Before the Test Make sure you know where your test center is well in advance of your test day so you do not get lost on the day of the test. On the night before the test, gather together the materials you will need the next day: - Your admission ticket - Two forms of identification (e.g., driver's license, student identification card, or current alien registration card) - Two No. 2 pencils with erasers - Directions to the test center - A watch (if you wish) but not one that makes noise, as it may disturb other test-takers On the day of the test, you should wake up early (after a good night's rest) and have breakfast. Dress comfortably, so that you are not distracted by being too hot or too cold while taking the test. Also, plan to arrive at the test center early. This will allow you to collect your thoughts and relax before the test, and will also spare you the stress of being late. If you arrive after the test begins, you will not be admitted to the test center and you will not receive a refund. During the Test When you arrive at the test center, try to find a seat where you feel most comfortable. Follow all the rules and instructions given by the test supervisor. If you do not, you risk being dismissed from the test and having your scores canceled. Once all the test materials are passed out, the test instructor will give you directions for filling out your answer sheet. Fill this sheet out carefully since this information will appear on your score report. After the Test When you have completed the SAT II: Math Level IIC Subject Test, you may hand in your test materials and leave. Then, go home and relax! When Will I Receive My Score Report and What Will It Look Like? You should receive your score report about five weeks after you take the test. This report will include your scores, percentile ranks, and interpretive information. Algebra & Trigonometry *John Wiley & Sons* "As a mathematics professor, I would hear my students say, "I understand you in class, but when I get home I am lost." When I would probe further, students would continue with "I can't read the book." As a mathematician, I always found mathematics textbooks quite easy to read--and then it dawned on me: Don't look at this book through a mathematician's eyes; look at it through the eyes of students who might not view mathematics the same way that I do. What I found was that the books were not at all like my class. Students understood me in class, but when they got home they couldn't understand the book. It was then that the folks at Wiley lured me into writing. My goal was to write a book that is seamless with how we teach and is an ally (not an adversary) to student learning. I wanted to give students a book they could read without sacrificing the rigor needed for conceptual understanding. The following quote comes from a reviewer when asked about the rigor of the book: I would say that this text comes across as a little less rigorous than other texts, but I think that stems from how easy it is to read and how clear the author is. When one actually looks closely at the material, the level of rigor is high"-- Trigonometry *John Wiley & Sons* The Free Christian Test Prep Book 45 Free Test Tips for SAT, ACT and PERT / the SHORT VERSION Summary for the ebook On Amazon, there is a description of the book. His YouTube channel has some of the demonstrations for solving math and reading problems, and he gives tips and shortcuts for tackling the "problem solving." "Many of the math questions for the SAT and ACT are based on Geometry and Algebra," Steve points out. "Students often take the tests while doing homework from pre-calculus and trigonometry classes. No wonder many students are stumped. They are out of practice and they are working on Trig or Algebra 2 when the tests are asking for lower math skills. Another difficulty comes because the focus of many geometry classes is "finding the missing step in the proof" and "which theorem should we use?" Steve's tips help you increase your "processing speed" -- it's like upgrading your computer's chip. Some students find that they can get through to the end of the test and have time to check the problems that they skipped. The second part of his book answers the question, "Do you want a higher test score or do you want to get into a great college for you?" Pulling on his experience as a high school advisor, he shows you how to get free ebooks and set up a free website to highlight your achievements, skills and abilities. This is not your typical list of tips for getting a higher test score. This is a collection of procedures for finding free resources. Steve even offers you to get the book as a free download... go to TinyURL.com/SteveFreeTestPrepBook and get this book free. Other activities recommended for your "digital portfolio" are collecting and selecting photos from your Instagram account (or other places where you collect photos). Show what you find interesting. You can get more tips from TinyURL.com/ShowYourWork (the ebook) and TinyURL.com/ShowYourWork1 (the free website) When preparing for a college interview, put yourself in the shoes of a college advisor. The college might need to go through tens of thousands of applications to select around 1000 students and make offers to them. The officer who looks at your application might have to review twenty or thirty applications that day. What can put you on the top of his "list of interesting applicants"? Are you well-rounded? Or are you "lumpy"? Are you focused in one or two areas that make you "spiky" and make you perhaps less rounded? What is your story? Look at the application. Does your application tell your story? Look at two portfolios of work TINYURL.com/AbelSite TINYURL.com/ExampleDP Ben Stanley shows almost every piece of school work that he completed at High Tech High. Abel Thon tells people "I want to be an occupational therapist" and shows a video of the place where he completed his internship. Which approach speaks to you? Ben's "everything" approach or Abel's "four page" approach? I prefer the four-page approach. Why not have both? Create a website to hold all of your work and then create a site that shows highlights. Make two portfolios. Here's my graduate portfolio Sites.google.com/site/eddsteve2011. I've got notes and essays from a dozen courses that I took as part of a graduate program at nova university.
