SEPTEMBER 1913 (CLASSIC REPRINT)

Forgotten Books Excerpt from The Journal of the American Society of Mechanical Engineers, Vol. 35: September 1913 Of the greatest importance to the welfare of the Society itself is the record of the Increase of Membership Committee, which last June succeeded in raising the membership to more than five thousand. There were 523 members added as a result of the ballot at the Spring Meeting, and since that time 387 applications have been received. The Society is increasing at the rate of one thousand members a year and if this should continue, as it is believed that it will. The coming season will end with a membership of six thousand. CHRONICLES OF MECHANICAL ENGINEERING IN THE UNITED STATES

American Society of Mechanical Engineers One of the leading contributors of historical articles to ME over the past fifty years was Fritz Hirschfeld. In preparation for the United States' bicentennial year in 1976, the editors of Mechanical Engineering contracted with engineer-historian Hirschfeld for a series of articles on the country's early engineering history. Just a few years later, as the Society was nearing its centennial in 1880, the editors again turned to Hirschfeld and asked him

to write a series of articles about the founding of ASME and important early mechanical engineers. Hirschfeld's articles, collected here, provide the foundation for the early portion of this volume. Building upon Hirschfeld's foundation, we selected a wide assortment of other articles about aspects of mechanical engineering history in the United States from the Revolutionary War until recent times. We largely limited our selections to those articles published in *Mechanical Engineering* magazine during the last fifty years (i.e., 1971-2021). Even for this period, the volume does not include all such articles due to limitations in length and editorial judgments. For instance, some articles duplicated coverage of specific events or innovations. In such cases we picked what we deemed the best, or most comprehensive of overlapping articles. We also decided to focus this volume on the history of mechanical engineering in America. We thus excluded articles on historical developments largely occurring outside the United States. At some future time, we may "harvest" both pre-1971 ME articles and unselected post-1971 articles, as well as articles focusing on non-American mechanical engineering achievements, for a separate collection or collections. Of the more than seventy articles collected in this volume, well over ninety per cent were drawn from issues of ME published during the past fifty years. Five pieces, however, were drawn from outside that chronological limit or from other sources. We have, for example, included a 1933 biographical article from ME about American engineer George H. Corliss. Corliss's innovations in the design and manufacture of steam engines and related devices helped establish the United States as a major player in the manufacture of prime movers. Corliss was considered by his contemporaries to be such a significant figure in mechanical engineering circles in the United States that we elected to include him. He was, after all, asked to serve as the first president of ASME-an offer which he declined. A second exception is another biographical article, one on Edwin Reynolds, a significant steam engine designer. It was authored by Thomas Fehring, one of the editors of this volume. Reynolds worked for a time for the Corliss Steam Engine Company, as did other notable American engineers such as Erasmus Darwin Leavitt (second president of ASME) and Alexander L. Holley (one of the founders of the Society), before moving to Allis-Chalmers. Reynolds made significant improvements in steam engine design. He was president of ASME in 1902-03, and three of his steam engines have been designated as Historic Mechanical Engineering Landmarks by the Society.

TRANSACTIONS OF THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS, VOL. 2 (CLASSIC REPRINT)

Forgotten Books Excerpt from Transactions of the American Society of Mechanical Engineers, Vol. 2 The President and the Treasurer for one year; and no person shall be eligible for immediate re-election as President who shall have held that office for two consecutive years; the vice-presidents for two years and the Managers for three years; and no vice-president or Manager shall be eligible for immediate re election to the same office at the expiration of the term for which he was elected. Art. 22. A Secretary, who shall be a member of the Society, shall be appointed for one year by a majority of the members of the Council at its first meeting after the annual election, or as soon thereafter as the votes of a majority of the members of the Council can be secured for a candidate. The Secretary may be removed by a vote of twelve members of the Council, at any time after one month's notice has been given him by a majority of its members to Show cause why he should not be removed, and he has been heard to that effect. The Secretary may take part in any of the deliberations of the Council, but shall not have a vote therein. His salary shall be fixed for the time he is appointed by a majority vote of the Council. Art. 23. At each annual meeting, a President, three vice-presidents, three Managers and a Treasurer shall be elected, and the term of office of each Shall continue until the end of the meeting at which their successors are elected. Art. 24. The duties of all officers shall be such as usually pertain to their offices or may be delegated to them by the Council or by the Society. The Council may, in its discretion, require bonds to be given by the Treasurer. Art. 25. The Council may, by vote of a majority of all its members, declare the place of any officer vacant, on his failure for one year, from inability or otherwise, to attend the Council meetings, or to. Perform the duties of his office. All such vacancies and those occurring by death or resignation shall be filled by the appointment of the Council, and any person so appointed shall hold office for the remainder of the term for which his predecessor was elected or appointed; provided that the said appointment shall not render him ineligible at the next annual meeting. LANDMARKS IN MECHANICAL ENGINEERING

Machines, devices, and systems that have touched our lives, both intimately and for the public good, are often unheralded inventions that we take for granted or never even see. Fortunately, they claim landmark recognition by the American Society of Mechanical Engineers, which now makes these engineering marvels accessible to teachers and students, travelers, researchers, and the curious. The 135 historic mechanical engineering landmarks in this book represent the accomplishments of mechanical engineers over the past 250 years - from the steam engine of Thomas Newcomen (1712), which launched the Industrial Revolution, to the Saturn V rocket (1967). This roster of landmarks tells a magnificent story of people and places and of innovation and discovery.

THE JOURNAL OF THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS; JANUARY TO DECEMBER, 1922 (CLASSIC REPRINT)

Forgotten Books Excerpt from Mechanical Engineering, Vol. 44: The Journal of the American Society of Mechanical Engineers; January to December, 1922 It has already been pointed out that the average student entering American engineering colleges is younger and less thoroughly prepared in fundamentals than the continental student. The American boy has several things in mind when he enters an engineering college: First and foremost, that the training will enable him to earn a better living than if he were without training and therefore he favors practical courses to pure theory; second, that athletics, fraternity life, and other college activities are almost if not actually of equal importance with instructional courses; and third, that his four years in college before entering a cold-blooded business world are going to be the happiest in his life and he must not fail to have a good time during his college career. Bennett, State Highway Commissioner of Connecticut, representing the American Association of State Highway Officials Vice-chairman, Dr. M. G. Lloyd, representing the United States Bureau of Standards; Secretary, Walter S. Paine, Research Engineer, Aetna Insurance Company, Hartford, Conn., representing the National Safety Council. The sectional committee by resolution invited the Aeronautical Chamber of Commerce of the United States to participate in the work of the committee. It was also decided at the organization meeting of the sectional committee to appoint a sub-committee to investigate the efficiency of all color signals now in use as traffic signals, and where possible to

ascertain the reasons for adopting certain colors for specific uses. This committee will investigate the use of various types of semaphores and silent policemen. Another committee will make an original study of specific colors for definite uses as a check upon previous researches and to establish certain colors for traffic signals. A third committee will study non-lumina ous signs and signals (excluding luminous signals) and after a thorough research propose signs of definite colors and shapes for highways and also for railroad crossings. JOURNAL OF THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS

APPLIED WELDING ENGINEERING

PROCESSES, CODES, AND STANDARDS

Elsevier While there are several books on market that are designed to serve a company's daily shop-floor needs. Their focus is mainly on the physically making specific types of welds on specific types of materials with specific welding processes. There is nearly zero focus on the design, maintenance and troubleshooting of the welding systems and equipment. *Applied Welding Engineering: Processes, Codes and Standards* is designed to provide a practical in-depth instruction for the selection of the materials incorporated in the joint, joint inspection, and the quality control for the final product. Welding Engineers will also find this book a valuable source for developing new welding processes or procedures for new materials as well as a guide for working closely with design engineers to develop efficient welding designs and fabrication procedures. *Applied Welding Engineering: Processes, Codes and Standards* is based on a practical approach. The book's four part treatment starts with a clear and rigorous exposition of the science of metallurgy including but not limited to: Alloys, Physical Metallurgy, Structure of Materials, Non-Ferrous Materials, Mechanical Properties and Testing of Metals and Heat Treatment of Steels. This is followed by self-contained sections concerning applications regarding Section 2: Welding Metallurgy & Welding Processes, Section 3: Nondestructive Testing, and Section 4: Codes and Standards. The author's objective is to keep engineers moored in the theory taught in the university and colleges while exploring the real world of practical welding engineering. Other topics include: Mechanical Properties and Testing of Metals, Heat Treatment of Steels, Effect of Heat on Material During Welding, Stresses, Shrinkage and Distortion in Welding, Welding, Corrosion Resistant Alloys-Stainless Steel, Welding Defects and Inspection, Codes, Specifications and Standards. The book is designed to support welding and joining operations where engineers pass plans and projects to mid-management personnel who must carry out the planning, organization and delivery of manufacturing projects. In this book, the author places emphasis on developing the skills needed to lead projects and

interface with engineering and development teams. In writing this book, the book leaned heavily on the author's own experience as well as the American Society of Mechanical Engineers (www.asme.org), American Welding Society (www.aws.org), American Society of Metals (www.asminternational.org), NACE International (www.nace.org), American Petroleum Institute (www.api.org), etc. Other sources includes The Welding Institute, UK (www.twi.co.uk), and Indian Air force training manuals, ASNT (www.asnt.org), the Canadian Standard Association (www.cas.com) and Canadian General Standard Board (CGSB) (www.tpsgc-pwgsc.gc.ca). Rules for developing efficient welding designs and fabrication procedures Expert advice for complying with international codes and standards from the American Welding Society, American Society of Mechanical Engineers, and The Welding Institute(UK) Practical in-depth instruction for the selection of the materials incorporated in the joint, joint inspection, and the quality control for the final product.

MECHANICAL ENGINEERING DESIGN

THIRD EDITION

CRC Press Mechanical Engineering Design, Third Edition strikes a balance between theory and application, and prepares students for more advanced study or professional practice. Updated throughout, it outlines basic concepts and provides the necessary theory to gain insight into mechanics with numerical methods in design. Divided into three sections, the text presents background topics, addresses failure prevention across a variety of machine elements, and covers the design of machine components as well as entire machines. Optional sections treating special and advanced topics are also included. Features: Places a strong emphasis on the fundamentals of mechanics of materials as they relate to the study of mechanical design Furnishes material selection charts and tables as an aid for specific uses Includes numerous practical case studies of various components and machines Covers applied finite element analysis in design, offering this useful tool for computer-oriented examples Addresses the ABET design criteria in a systematic manner Presents independent chapters that can be studied in any order Introduces optional MATLAB® solutions tied to the book and student learning resources Mechanical Engineering Design, Third Edition allows students to gain a grasp of the fundamentals of machine design and the ability to apply these fundamentals to various new engineering problems.

SOLID (BIO)MECHANICS: CHALLENGES OF THE NEXT DECADE

A BOOK DEDICATED TO PROFESSOR GERHARD A. HOLZAPFEL

Springer Nature This book offers a comprehensive and timely overview of the latest developments in the field of biomechanics and extensive knowledge of tissue structure, function, and modeling. Gathering chapters written by authoritative scientists, it reports on a range of continuum and computational models of solids, and related experimental works, for biomechanical applications. It discusses cutting-edge advances such as constitutive modeling and computational simulation of biological tissues and organs under physiological and pathological conditions, and their mechanical characterization. It covers innovative studies on arteries, heart, valvular tissue, and thrombus, brain tumor, muscle, liver, kidney, and stomach, among others. Written in honor of Professor Gerhard A. Holzapfel, the book provides specialized readers with a thorough and timely overview of different types of modeling in biomechanics, and current knowledge about biological structures and function.

LIST OF SERIALS CURRENTLY RECEIVED IN THE LIBRARY OF THE UNITED STATES DEPARTMENT OF AGRICULTURE AS OF JULY 1, 1957

This list includes all serials, printed and processed, received by the Library of the United States Department of Agriculture, on a current basis, as of July 1, 1957. Only dailies or administrative use are omitted. A serial is defined as a publication that is issued either regularly or irregularly over an unspecified period of time. For the purposes of this list, a serial was considered current if it had been received in the Library at any time since January 1954, unless it was known to have ceased.

CONTACT PROBLEMS FOR SOFT, BIOLOGICAL AND BIOINSPIRED MATERIALS

Springer Nature This book contains contributions from leading researchers in biomechanics, nanomechanics, tribology, contact mechanics, materials science and applications on various experimental techniques including atomic force microscopy (AFM) for studying soft, biomimetic and biological materials and objects. Biologists, physicists, researchers applying methods of contact mechanics and researchers testing materials using indentation techniques along with many other applied scientists will find this book a useful addition to their libraries. Moreover, several reviews in this book are written as introductions to several important and rather sophisticated research areas such as depth-sensing indentation, studying of biological cells by AFM probes, mechanics of adhesive contact and contact between viscoelastic (hereditary elastic) solids. The book containing new theoretical models, results of experimental studies and numerical simulations, along with reviews of above mentioned areas of contact mechanics in application to biological systems, would be beneficial for researchers in many areas of biology, medicine, engineering, mechanics and biomimetics.

ARCTIC ENGINEERING

Provides guidance to United States Navy Personnel engaged in the planning, design, construction, alteration, repair, and maintenance of facilities in cold regions. Contains technical data useful in the development of engineering design in cold regions, material on climate, physical effects of cold, snow, ice, permafrost, descriptions of arctic, antarctic and subarctic regions, numerous maps, tables, graphs, photographs and drawings.
