MODERN APPLIED STATISTICS WITH S-PLUS

Springer Science & Business Media A guide to using the power of S-PLUS to perform statistical analyses, providing both an introduction to the program and a course in modern statistical methods. Readers are assumed to have a basic grounding in statistics, thus the book is intended for would-be users, as well as students and researchers using statistics. Throughout, the emphasis is on presenting practical problems and full analyses of real data sets, with many of the methods discussed being modern approaches to topics such as linear and non-linear regression models, robust and smooth regression methods, survival analysis, multivariate analysis, tree-based methods, time series, spatial statistics, and classification. This second edition is intended for users of S-PLUS 3.3, or later, and covers both Windows and UNIX. It treats the recent developments in graphics and new statistical functionality, including bootstrapping, mixed effects linear and non-linear models, factor analysis, and regression with autocorrelated errors. The authors have written several software libraries which enhance S-PLUS, and these, plus all the datasets used, are available on the Internet.

MESOZOIC RESOURCE POTENTIAL IN THE SOUTHERN PERMIAN BASIN

Geological Society of London The Southern Permian Basin, as its name suggests, is a historical heartland for hydrocarbon production from the Palaeozoic Rotliegend interval. However, in this mature basin the Mesozoic presents further possibilities to offer resource security to NW Europe. Such opportunities include increasing efficiency in the production of discovered hydrocarbons, exploration for further hydrocarbons (both conventional and unconventional) and efficient exploration for, and production of, geothermal energy. All these potential resources require a grounding in technically sound geoscience, via traditional scientific observation and the application of new technologies, to unlock their value. The main aim of this volume is to bring together the work of academics and industry workers to consider cross-border geoscience including contributions on Poland, Germany, The Netherlands, the United Kingdom and adjacent areas. The work presented intends to contribute to the development and discovery of further Mesozoic energy resources across the basin.

NUCLEAR STRUCTURE

Springer Science & Business Media After the success of the previous summer schools organized by the Nuclear Physics Division of the Netherlands' Physical Society in 1975 and 1977, we thought it worthwhile to continue this tradition. The immediate very positive reactions received from all invited speakers encouraged us to proceed with the organization. Although the number of students had to be restricted to about one hundred, the international character of the School was evident from about thirty nationalities which were represented. The material contained in this book covers the talks given by all speakers invited to lecture on the subject of nuclear structure research. These proceedings should therefore serve as an excellent introduction to many topics of current interest in this exciting field. We hope that the lectures and discussions as well as the many informal contacts made during the various social activities will greatly stimulate interest in nuclear structure investigations among all the participants. The organization of the summer school has been made possible by substantial support given by the Scientific Affairs Division of the North Atlantic Treaty Organization, the Netherlands' Ministry of Education and Science and the Netherlands' Physical Society. The invaluable help of the "Bureau Congressen" of the Ministry of Education and Science and the friendly assistance of the management of the College of Agriculture in Dronten contributed greatly to the pleasant atmosphere during the summer school.

150 ECG PROBLEMS E-BOOK

Elsevier Health Sciences This book offers 150 12-lead ECGs and rhythm strips, each with a clinical case history and question. The full ECG is reproduced and a study of it with the case history should be enough to give an answer. On the back the case is examined, with a description of the main features of the ECG along with a clinical interpretation and a "what to do" section. The cases are graded in difficulty. The unique page size allows presentation of all 12-lead ECGs across a single page for clarity. Several of the cases incorporate chest X-rays and coronary angiograms illustrating the appearances that are associated with various cardiac conditions. All the cases are graded in difficulty and are cross-referenced to the new editions of ECG Made Easy and ECG in Practice for further information. For this Fourth Edition over 30 new ECGs have been included, mainly to provide clearer examples, though the book deliberately retains some technically poor records to maintain a 'real-world' perspective.

COMPENDIUM OF RESEARCH REPORTS

WHY I AM NOT A SCIENTIST

ANTHROPOLOGY AND MODERN KNOWLEDGE

Univ of California Press "Highly readable and informative, this critical series of vignettes illustrates a long history of the corruption of science by folk beliefs, careerism, and sociopolitical agendas. Marks repeatedly brings home the message that we should challenge scientists, especially molecular geneticists, before we accept their results and give millions of dollars in public and private funds toward their enterprises."—Russell Tuttle, The University of Chicago "Jonathan Marks has produced a personal and compelling story of how science works. His involvement in scientific endeavor in human biology and evolution over the past three decades and his keen sense of the workings of science make this book a must read for both scientists and lay readers. In this sense, the lay reader will learn how scientists should and shouldn't think and some scientists who read this book will come away thinking they are truly not scientists nor would they want to be."—Rob DeSalle, American Museum of Natural History "Jonathan Marks's Why I Am Not a Scientist provides food for thought, and as expected, it's digestible. In unusually broad perspective, this anthropology of knowledge considers science and race and racism, gender, fraud, misconduct and creationism in a way that makes one proud to be called a scientist."—George J. Armelagos, Emory University

THE HIERARCHY OF ENERGY IN ARCHITECTURE

EMERGY ANALYSIS

Routledge The laws of thermodynamics—and their implications for architecture—have not been fully integrated into architectural design. Architecture and building science too often remain constrained by linear concepts and methodologies regarding energy that occlude significant quantities and qualities of energy. The Hierarchy of Energy in Architecture addresses this situation by providing a clear overview of what energy is and what architects can do with it. Building on the emergy method pioneered by systems ecologist Howard T. Odum, the authors situate the energy practices of architecture within the hierarchies of energy and the thermodynamics of the large, non-equilibrium, non-linear energy systems that drive buildings, cities, the planet and universe. Part of the PocketArchitecture series, the book is divided into a fundamentals section, which introduces key topics and the emergy methodology, and an applications section, which features case studies applying emergy to various architectural systems. The book provides a concise but rigorous exposure to the system boundaries of the energy systems related to buildings and as such will appeal to professional architects and architecture students.

ANIMAL SPIRITS

A BESTIARY OF THE COMMONS

Nai Uitgevers Pub During a time when pop stars become famous thanks to sex tapes that have been leaked online, it is clear that the Internet is not immune to the draw of the media. Yet art, academia and activism continue to promote the Internet as an untouched utopia. Animal Spirits: A Bestiary of the Commons addresses the double standard dominating contemporary media discourse and shatters the myths of creative commons, free software and open-source movements, suggesting that "free culture" is an economic parasite siphoning money through peer-to-peer networks. Theorist and digital fetishist Matteo Pasquinelli uses the metaphor of the animal body--which Paul Virilio has characterized as instinctual and reactionary--to counter what he sees as a capitalist exploitation of collective imagery, calling for a radical new understanding of the forces at work behind the digital economy and cultural production.
