Ethics of Global Development Agency, Capability, and Deliberative Democracy

Cambridge University Press Poverty, inequality, violence, environmental degradation, and tyranny continue to afflict the world. Ethics of Global Development offers a moral reflection on the ends and means of local, national, and global efforts to overcome these five scourges. After emphasizing the role of ethics in development studies, policy-making, and practice, David A. Crocker analyzes and evaluates Amartya Sen's philosophy of development in relation to alternative ethical outlooks. He argues that Sen's turn to robust ideals of human agency and democracy improves on both Sen's earlier emphasis on 'capabilities and functionings' and Martha Nussbaum's version of the capability orientation. This agency-focused capability approach is then extended and strengthened by applying it to the challenges of consumerism and hunger, the development responsibilities of affluent individuals and nations, and the dilemmas of globalization. Throughout the book the author argues for the importance of more inclusive and deliberative democratic institutions.

Encyclopedia of Global Justice A - I

Springer Science & Business Media Annotation This two-volume Encyclopedia of Global Justice, published by Springer, along with Springer's book series, Studies in Global Justice, is a major publication venture toward a comprehensive coverage of this timely topic. The Encyclopedia is an international, interdisciplinary, and collaborative project, spanning all the relevant areas of scholarship related to issues of global justice, and edited and advised by leading scholars from around the world. The wide-ranging entries present the latest ideas on this complex subject by authors who are at the cutting edge of inquiry. The Encyclopedia sets the tone and direction of this increasingly important area of scholarship for years to come. The entries number around 500 and consist of essays of 300 to 5000 words. The inclusion and length of entries are based on their significance to the topic of global justice, regardless of their importance in other areas.

Agency and Democracy in Development Ethics

Cambridge University Press Economists, philosophers, and policy experts from the Global North and South advance the conversation on the ethical dimensions of agency and democracy in development. These diverse essays from leading development academics and practitioners will interest students and scholars of global justice, international development and political philosophy.

Globalization and the Global Politics of Justice

Routledge This book brings together a set of distinguished academics and activists to analyze, critique, and debate the global politics of poverty and justice and the contemporary nature of globalization. It examines the connections between 'really existing globalization', global capitalism, and global poverty, and the idea of and prospects for 'global justice' now and in the future. Identifying continuing contradictions between the stated aims of the reigning global economic orthodoxy and the actual consequences of these policies in relation to alleviation of severe poverty and injustice, the authors engage in a lively critique of the very visible campaigns to end global poverty during the past several years and especially in 2005, the year of the make Poverty History campaign, Live8, the Africa Commission's report, and the Gleneagles G8 summit. Contributions range from consideration of the meaning and definition of global justice, its relation to global ethics and development in both theory and practice, analysis of the new forms of

global politics that challenge neoliberal globalization and global injustice, and trenchant critique of the practices and policies of some of the major organizations and agencies deeply involved in global poverty alleviation. Globalization and the Global Politics of Justice is highly recommended for all those interested in contemporary global politics and the issue of inequality, injustice, and poverty between the North and South. This book was previously published as a special issue of Globalizations

Public Values for Cities and City Policy

Springer Nature

Democracy in a Global World

Human Rights and Political Participation in the 21st Century

Rowman & Littlefield The chapters in this volume deal with timely issues regarding democracy in theory and in practice in today's globalized world. Authored by leading political philosophers of our time, they appear here for the first time. The essays challenge and defend assumptions about the role of democracy as a viable political and legal institution in response to globalization, keeping in focus the role of rights at the normative foundations of democracy in a pluralistic world. Through an examination of key topics of current relevance, with contrasting views of the leading theorists, the chapters address the most relevant theories and forms of globalization, traditional democratic paradigms and their limits, public deliberation and democratic participation, the moral hazards of imperial democracy, and the future of liberal democracy. In addition to suggesting new perspectives on democracy, they use the current debate on justice, human rights, sovereignty, and cultural relativism to shed light on enduring questions about politics, culture, and global development. This timely and provocative collection will be of interest to anyone concerned with democracy, human rights, global justice, economic development, poverty, international law, peace, and various aspects of globalization.

Universities and Global Human Development

Theoretical and empirical insights for social change

Routledge This book makes the case for a critical turn in development thinking around universities and their contributions in making a more equal post-2015 world. It puts forward a normative approach based on human development and the capability approach, one which can gain a hearing from policy, scholarship, and practitioners dealing with practical issues of understanding policy, democratising research and knowledge, and fostering student learning - all key university functions. The book argues that such an approach can elucidate development debates drawing on local, national and international issues and examples to show why higher education matters for sustainable development goals both in educational and social terms. It advocates a new arena of engagement with universities as key sites of development and freedoms beyond human capital and challenges development omissions and gaps around university education. The book explores how the human development approach addresses the following core ideas: the meaning of well-being, the idea of agency, participation and democratic citizenship, how to address inequalities, the relation between local and global, and the idea of equitable partnerships. This book is addressed to researchers and postgraduate students in development studies, university education, the capability approach and human development community.

Foundations and Frontiers of Deliberative Governance

Oxford University Press Deliberative democracy puts communication and talk at the centre of democracy. This text takes a fresh look at the foundations of the field, and develops new applications in areas ranging from citizen participation to the democratization of authoritarian states to the global system.

The Conceptual Foundations of Transitional Justice

Cambridge University Press This accessible book analyses transitional justice and discusses how it differs from retributive, corrective, and distributive justice.

International Encyclopedia of

Digital Communication and Society, 3 Volume Set

John Wiley & Sons "The International Encyclopedia of Digital Communication and Society" offers critical assessments of theoretical and applied research on digitally-mediated communication, a central area of study in the 21st century. - Examines topics with unprecedented breadth and depth, with the aim of bringing together international and interdisciplinary perspectives - Organized in an accessible A-Z format with over 150 entries on key topics ranging from 2,000 to 10,000 words - Addresses a full range of topics including digitally-mediated social media, commercial applications and online gaming, to law and policy analysis and information and communication technologies for development - Published with a regularly updated online edition which will ensure readers are kept abreast of the latest developments in research- Part of "The Wiley Blackwell-ICA International Encyclopedias of Communication" series, published in conjunction with the "International Communication Association"

An Introduction to the Human Development and Capability Approach

Freedom and Agency

IDRC This volume aims to provide new ways of thinking about population trends in the 21st century. While the 20th century was the century of population growth, with the world's population increasing from 1.6 to 6.1 billion, this book shows that the 21st centur

The Politics of the Anthropocene

Oxford University Press, USA The Politics of the Anthropocene is a sophisticated yet accessible treatment of how human institutions, practices, and principles need to be re-thought in response to the challenges of the Anthropocene, the emerging epoch of human-induced instability in the Earth system and its life-support capacities. However, the world remains stuck with practices and modes of thinking that were developed in the Holocene - the epoch of around 12,000 years of unusual stability in the Earth system, toward the end of which modern institutions such as states and capitalist markets arose. These institutions persist despite their potentially catastrophic failure to respond to the challenges of the Anthropocene, foremost among them a rapidly changing climate and accelerating biodiversity loss. The

pathological trajectories of these institutions need to be disrupted by advancing ecological reflexivity: the capacity of structures, systems, and sets of ideas to question their own core commitments, and if necessary change themselves, while listening and responding effectively to signals from the Earth system. This book envisages a world in which humans are no longer estranged from the Earth system but engage with it in a more productive relationship. We can still pursue democracy, social justice, and sustainability - but not as before. In future, all politics should be first and foremost a politics of the Anthropocene. The arguments are developed in the context of issues such as climate change, biodiversity, and global efforts to address sustainability.

Human Development and Capabilities

Re-imagining the university of the twenty-first century

Routledge Globally, universities are the subject of public debate and disagreement about their private benefits or public good, and the key policy vehicle for driving human capital development for competitive knowledge economies. Yet what is increasingly lost in the disagreements about who should pay for university education is a more expansive imaginary which risks being lost in reductionist contemporary education policy. This is compounded by the influences on practices of students as consumers, of a university education as a private benefit and not a public good, of human capital outcomes over other graduate qualities, and of unfettered markets in education. Policy reductionism comes from a narrow vision of the activities, products, and objectives of the University and a blinkered vision of what is a knowledge society. Human Development and Capabilities, therefore, imaginatively applies a theoretical framework to universities as institutions and social practices from human development and the capability approach, attempting to show how universities might advance equalities rather than necessarily widen them, and how they can contribute to a sustainable and democratic society. Picking through the capability approach for human development, in relation to Universities, this book highlights and explores three main ideas: theoretical insights to advance thinking about human development and higher education Policy implications for the responsibilities and potential contributions of universities in a period of significant global change Operationalising a New Imaginary This fresh take on the work and purpose of the University is essential reading for anyone interested in university education, capability approach and human development; particularly postgraduates, University policy makers, researchers and academics in the field of higher education.

Capabilities Equality

Basic Issues and Problems

Routledge The capabilities approach to equality, developed by Amartyr Sen and Martha Nussbaum, seeks to answer the question: what is a proper measure of a person's condition for the purposes of determining what we owe each other, as a matter of justice? While the capabilities theory has avoided many of the conceptual difficulties that have undermined competing accounts of egalitarian justice, recent criticisms have raised questions regarding the focus, structure and justification of the theory. In this volume, leading scholars present new and original essays that address these controversies.

Capabilities and Social Justice

The Political Philosophy of Amartya Sen and Martha Nussbaum

Ashgate Publishing, Ltd. The capability approach to social justice construes a person's well-being in terms of the substantive freedoms people value. John Alexander engages with the rapidly growing body of literature on the capability approach in economics, inequality, poverty measurement and development studies. Critically assessing Sen and Nussbaum's work in normative economics, social ethics and political philosophy, Alexander develops a unified vision of the capability approach embodying the ideal of creating the greatest possible condition for the realization of basic capabilities for all. He then assesses this vision as a political theory arguing that capabilities are necessary but not sufficient for overcoming conditions of domination. The book calls for a more intimate relationship between individual liberty and the freedom of the political community as a whole

Universities and Global Human Development

Theoretical and empirical insights for social change

Routledge This book makes the case for a critical turn in development thinking around universities and their contributions in making a more equal post-2015 world. It puts forward a normative approach based on human development and the

capability approach, one which can gain a hearing from policy, scholarship, and practitioners dealing with practical issues of understanding policy, democratising research and knowledge, and fostering student learning - all key university functions. The book argues that such an approach can elucidate development debates drawing on local, national and international issues and examples to show why higher education matters for sustainable development goals both in educational and social terms. It advocates a new arena of engagement with universities as key sites of development and freedoms beyond human capital and challenges development omissions and gaps around university education. The book explores how the human development approach addresses the following core ideas: the meaning of well-being, the idea of agency, participation and democratic citizenship, how to address inequalities, the relation between local and global, and the idea of equitable partnerships. This book is addressed to researchers and postgraduate students in development studies, university education, the capability approach and human development community.

Ethics & International Affairs

A Reader, Third Edition

Georgetown University Press The third edition of Ethics & International Affairs provides a fresh selection of classroom resources, ideal for courses in international relations, ethics, foreign policy, and related fields. Published with the Carnegie Council for Ethics in International Affairs, this collection contains some of the best contemporary scholarship on international ethics, written by a group of distinguished political scientists, political theorists, philosophers, applied ethicists, and economic development specialists. Each contributor explores how moral theory can inform policy choices regarding topics such as war and intervention, international organizations, human rights, and global economic justice. This book provides an entry point into these key debates and offers a platform for further discussion. Published in cooperation with the Carnegie Council for Ethics in International Affairs

Parceling the Globe

Philosophical Explorations in Globalization, Global Behavior, and Peace

Rodopi Parceling the Globe is a study in the processes of global democracy. It offers an early answer to the question regarding our responsibility to others. Through its organization, it presents a partial understanding of the globalization process. It determines the range of global behaviors and articulates the prospects for peace in a

globalizing environment.

Decentralization, Democratization, and Informal Power in Mexico

Penn State Press "Explores the democratization and decentralization of governance in Mexico and finds that informal political networks continue to mediate citizens' relationships with their elected authorities. Analyzes the linkages between informal and formal power by comparing how they worked in three Mexican cities: Tijuana, Ciudad Nezahualcâoyotl, and Chilpancingo"--Provided by publisher.

Cosmopolitanism

Ideals and Realities

John Wiley & Sons This book sets out the case for a cosmopolitan approach to contemporary global politics. It presents a systematic theory of cosmopolitanism, explicating its core principles and justifications, and examines the role many of these principles have played in the development of global politics, such as framing the human rights regime. The framework is then used to address some of the most pressing issues of our time: the crisis of financial markets, climate change and the fallout from the wars in Afghanistan and Iraq. In each case, Held argues that realistic politics is exhausted, and that cosmopolitanism is the new realism. See also Garrett Wallace Brown and David Held's The Cosmopolitanism Reader.

Sociological Theory and the Capability Approach

Routledge Sociological Theory and the Capability Approach connects normative strands of sociological theory to the fusion of ethics and economics proposed by

Amartya Sen's and Martha Nussbaum's capability approach. Spanning classical (Hegel, Marx, Durkheim, Scheler, Weber) and contemporary debates (Parsons, Giddens, Luhmann) it identifies areas that bridge the current gap between sociology and capability approach. It thus builds on explanatory and normative concerns shared by both traditions. Engaging readers from sociology and capability approach, Spiros Gangas suggests that the proposed dialogue should be layered along the main areas of value theory, economy and society, extending this inquiry into the normative meaning attached to being human. To this end, the book reconstructs the notion of agency along the tracks of Nussbaum's central human capabilities, considering also alienation and the sociology of emotions. It concludes by addressing the capability approach through the lens of social institutions before it takes up the challenge of ideological fundamentalism and how it can be effectively confronted by capability approach. This original book provides a fresh perspective on capability approach as it embeds it in the rich pool of sociological theory's accomplishments. As an exercise in theoretical and normative convergence, it will be required reading for academics and students in social theory, cultural theory, philosophy and human development studies.

Public Reason and Bioethics

Three Perspectives

Springer Nature This book explores and elaborates three theories of public reason, drawn from Rawlsian political liberalism, natural law theory, and Confucianism. Drawing together academics from these separate approaches, the volume explores how the three theories critique each other, as well as how each one brings its theoretical arsenal to bear on the urgent contemporary debate of medical assistance in dying. The volume is structured in two parts: an exploration of the three traditions, followed by an in-depth overview of the conceptual and historical background. In Part I, the three comprehensive opening chapters are supplemented by six dynamic chapters in dialogue with each other, each author responding to the other two traditions, and subsequently reflecting on the possible deficiencies of their own theories. The chapters in Part II cover a broad range of subjects, from an overview of the history of bioethics to the nature of autonomy and its status as a moral and political value. In its entirety, the volume provides a vibrant and exemplary collaborative resource to scholars interested in the role of public reason and its relevance in bioethical debate.

The Oxford Handbook of Deliberative Democracy

Oxford University Press Deliberative democracy has been one of the main games in contemporary political theory for two decades, growing enormously in size and importance in political science and many other disciplines. The Oxford Handbook of

Deliberative Democracy takes stock of deliberative democracy as a research field, in philosophy, in various research programmes in the social sciences and law, and in political practice around the globe. It provides a concise history of deliberative ideals in political thought and discusses their philosophical origins. The Handbook locates deliberation in political systems with different spaces, publics, and venues, including parliaments, courts, governance networks, protests, mini-publics, old and new media, and everyday talk. It engages with practical applications, mapping deliberation as a reform movement and as a device for conflict resolution, documenting the practice and study of deliberative democracy around the world and in global governance.

Allocating the Earth

A Distributional Framework for Protecting Capabilities in Environmental Law and Policy

Oxford University Press, USA This book offers a framework for improving both the substantive outcomes of environmental policies, and the decision-making processes that produce those outcomes. Both aspects of environmental policy create important inequities that the dominant economic approach to evaluating and designing environmental policies cannot adequately address. Holland draws on the 'capabilities theory' of Amartya Sen and Martha Nussbaum to develop an approach to evaluating anddesigning environmental policies that is grounded in ideals of social justice rather than economic efficiency. She applies this framework to demonstrate its potential to improve current valuation ofenvironmental goods, justification of environmental protection, and inclusion of citizens in the decisions about environmental protection. While richly informed by both philosophy and economic reasoning, the book is highly accessible and suitable for non-specialists interested in understanding the theory and practice of environmental protection in the United States.

Developing Minds

Psychology, neoliberalism and power

Taylor & Francis Development policy makers and practitioners are becoming increasingly sophisticated in their ability to target 'development' interventions and the psychological domain is now a specific frontier of their interventional focus. This landmark study considers the problematic relationship between development and

psychology, tracing the deployment of psychological knowledge in the production/reproduction of power relations within the context of neoliberal development policy and intervention. It examines knowledge production and implementation by actors of development policy such as the World Bank and the neo-colonial state - and ends by examining the proposition of a critical psychology for more emancipatory forms of development. The role of psychology in development studies remains a relatively unexplored area, with limited scholarship available. This important book aims to fill that gap by using critical psychology perspectives to explore the focus of the psychological domain of agency in development interventions. It will be essential reading for students, researchers, and policy makers from fields including critical psychology, social psychology, development studies and anthropology.

Democratizing Global Justice Deliberating Global Goals

Cambridge University Press The tensions between democracy and justice have long preoccupied political theorists. Institutions that are procedurally democratic do not necessarily make substantively just decisions. Democratizing Global Justice shows that democracy and justice can be mutually reinforcing in global governance - a domain where both are conspicuously lacking - and indeed that global justice requires global democratization. This novel reconceptualization of the problematic relationship between global democracy and global justice emphasises the role of inclusive deliberative processes. These processes can empower the agents necessary to determine what justice should mean and how it should be implemented in any given context. Key agents include citizens and the global poor; and not just the states but also international organizations and advocacy groups active in global governance. The argument is informed by and applied to the decision process leading to adoption of the Sustainable Development Goals, and climate governance inasmuch as it takes on questions of climate justice.

The Paradox of Local Empowerment Decentralization and Democratic Governance in Mexico

Governing Biodiversity through

Democratic Deliberation

Routledge This book discusses political controversies involved in global biodiversity policy, and the practical opportunities that are opened up in solving them through increased citizen participation and democratic deliberation. It examines the emerging practice of deliberative global governance and its political consequences. The collection focuses on the intersection of global biodiversity policy and the promise of deliberative democracy. In doing so, it examines how new discursive logics emerge in global citizen deliberation that might destabilize the impasses encountered in biodiversity negotiations, how a "global citizens' voice" emerges in deliberative processes despite the dominance of national institutions in the lives of those citizens, the most effective and innovative ways to amplify the results of large-scale deliberations to policy makers and broader audiences, and how future citizen deliberations can be designed to make them fair, feasible and consequential processes, in general and for biodiversity issues in particular. This highly original contribution to the field provides theoretical discussions, empirical analyses and local experiences of biodiversity policy, making it an invaluable resource for students and scholars of environmental politics, governance and sociology, particularly those interested in deliberative democracy, citizen participation and biodiversity.

Re-framing Democracy and Agency in India

Interrogating Political Society

Anthem Press 'Re-framing Democracy and Agency in India: Interrogating Political Society' critically unpacks the concept of 'political society', which was formulated as a response to the idea of civil society in the postcolonial context. The volume's case studies, drawn from across India and combined with a sharp focus on the concept of political society, provide those interested in Indian democracy and its changing patterns with an indispensable collection of works, brought together in their common pursuit of highlighting the limitations of different core concepts as formulated by Chatterjee. Centred around five themes – the relation between the civil and the political; the role of middlemen and their impact on the mobility of subaltern groups; elites and leadership; the fragmentation and intra-subaltern conflicts and their implications for subaltern agency; and the idea of moral claims and moral community – this volume re-frames issues of democracy and agency in India within a wider scope than has ever been published before, and gathers ideas from some of the foremost scholars in the field. The volume concludes with a rejoinder from Partha Chatterjee.

The Philosopher's Index

Vols. for 1969- include a section of abstracts.

Governance Reform Under Real-World Conditions

Citizens, Stakeholders, and Voice

World Bank Publications Although necessary and often first rate, technocratic solutions alone have been ineffective in delivering real change or lasting results in governance reforms. This is primarily because reform programs are delivered no in controlled environments, but under complex, diverse, sociopolitical and economic conditions. Real-world conditions. In political societies, ownership of reform programs by the entire country cannot be assumed, public opinion will not necessarily be benign, and coalitions of support may be scare or nonexistent, even when intended reforms really will benefit those who need them most. While the development community has the technical tools to address governance challenges, experience shows that technical solutions are often insufficient. Difficulties arise when attempts are made to apply what are often excellent technical solutions. Human beings--either acting alone or in groups small and large--are not as amenable as are pure numbers, and they cannot be ignored. In the real world, reforms will not succeed, and they will certainly not be sustained, without the correct alignment of citizens, stakeholders, and voice. 'Governance Reform under Real-World Conditions: Citizens, Stakeholders, and Voice' is a contribution to efforts to improve governance systems around the world, particularly in developing countries. The contributors, who are academics and development practitioners, provide a range of theoretical frameworks and innovative approaches and techniques for dealing with the most important nontechnical or adaptive challenges that impede the success and sustainability of reform efforts. The editors and contributors hope that this book will be a useful guider for governments, think tanks, civil society organizations, and development agencies working to improve the ways in which governance reforms are implemented around the world.

Oral Democracy

Deliberation in Indian Village Assemblies

Cambridge University Press Studies citizens' deliberation on governance and development in Indian democracy, and the influence of state policy and literacy, analysing three hundred village assemblies. This title is also available as Open

Access.

Public-Private Partnerships for Sustainable Development

MDPI Voluntary sustainability standards (VSS) and other private governance instruments (e.g., Fair Trade, Forest Stewardship Council, Fair Wear Foundation, GLOBALGAP) are increasingly regulating global production processes and economic activities. VSS verify the compliance of products or production processes with sustainability standards. The importance of voluntary sustainability standards is now widely recognized. After being operational for more than two decades, they have established themselves as private governance instruments. This recognition is also exemplified by their integration in public regulatory approaches. Governments and international organizations are partnering with voluntary sustainability standards to pursue sustainable development policies. We witness the integration of VSS in the regulatory approaches of local and national governments in countries around the world, the integration of VSS in trade policies, the emergence of public–private initiatives to govern global supply chains, and the inclusion of private initiatives in experimentalist governance regimes. This Special Issue seeks to bring together research on the interface between private and public governance. We welcome contributions which analyze specific case studies on the emergence and development of these private–public interactions, the design of public–private governance, the effectiveness of these governance arrangements, and critical perspectives on the possibilities and limitations of such public–private forms of governance. We welcome multi-disciplinary perspectives including contributions from economics, political science, law, sociology, geography, and anthropology. Papers selected for this Special Issue are subject to a peer review procedure with the aim of rapid and wide dissemination of research results, developments, and applications.

Routledge Handbook of Development Ethics

Routledge The Routledge Handbook of Development Ethics provides readers with insight into the central questions of development ethics, the main approaches to answering them, and areas for future research. Over the past seventy years, it has been argued and increasingly accepted that worthwhile development cannot be reduced to economic growth. Rather, a number of other goals must be realised: • Enhancement of people's well-being • Equitable sharing in benefits of development • Empowerment to participate freely in development • Environmental sustainability • Promotion of human rights • Promotion of cultural freedom, consistent with human rights • Responsible conduct, including integrity over corruption Agreement that these are essential goals has also been accompanied by disagreements about how

to conceptualize or apply them in different cases or contexts. Using these seven goals as an organizing principle, this handbook presents different approaches to achieving each one, drawing on academic literature, policy documents and practitioner experience. This international and multi-disciplinary handbook will be of great interest to development policy makers and program workers, students and scholars in development studies, public policy, international studies, applied ethics and other related disciplines.

The Oxford Handbook of Feminist Theory

Oxford University Press The Oxford Handbook of Feminist Theory provides a rich overview of the analytical frameworks and theoretical concepts that feminist theorists have developed to analyze the known world. Featuring leading feminist theorists from diverse regions of the globe, this collection delves into forty-nine subject areas, demonstrating the complexity of feminist challenges to established knowledge, while also engaging areas of contestation within feminist theory. Demonstrating the interdisciplinary nature of feminist theory, the chapters offer innovative analyses of topics central to social and political science, cultural studies and humanities, discourses associated with medicine and science, and issues in contemporary critical theory that have been transformed through feminist theorization. The handbook identifies limitations of key epistemic assumptions that inform traditional scholarship and shows how theorizing from women's and men's lives has profound effects on the conceptualization of central categories, whether the field of analysis is aesthetics, biology, cultural studies, development, economics, film studies, health, history, literature, politics, religion, science studies, sexualities, violence, or war.

Arguing Global Governance Agency, Lifeworld and Shared Reasoning

Routledge This book deals with the questions of how global governance can and ought to effectively address serious global problems, such as financial instability, military conflicts, distributive injustice and increasing concerns of ecological disasters. Providing a unified theoretical framework, the contributors to this volume utilise argumentation research, broadening the concept by identifying the concerns about agency, lifeworld and shared reasoning that different strands of argumentation research have in common. Furthermore, they develop the concept of argumentative deontology in order to make sense of the processes through which argumentation comes to shape global governance. Empirically, the book demonstrates how ideas define actors' interests, shape their interactions with each

other, and ground intentions for collective action. Normatively, it provides an excellent theoretical platform for unveiling less visible manifestations of power in global politics and thereby improves our understandings of the ethical implications of global ordering. Addressing topical issues such as conflict and inter-civilizational dialogue, decision-making in international regimes and organizations, the World Social Forum, the Women's Environment and Development Organization and Tobin Tax, this book will be of interest to students and scholars of argumentation theory, globalization and global governance

Rural Governance

International Perspectives

Routledge Recent decades have witnessed the transition from the government of rural areas towards processes of governance in which the boundaries between the state and civil society are blurred. As a result, governance is commonly linked to 'bottom-up' or community-based approaches to planning and development, which are said to 'empower' rural citizens and liberate them from the disabling structures of top-down government control. At the same time, however, a range of other actors beyond the local level have also become increasingly influential in determining the future of rural spaces, thereby embedding rural citizens within new configurations of power relations. This book critically explores the social causes and consequences of these emerging governance arrangements. In particular, the book seeks to move beyond questions of empowerment in governance debates and to consider how new kinds of power relations arise between the various actors involved. The book addresses questions concerning the nature of power relations in contemporary forms of rural governance, including: how community participation is negotiated and achieved; the effects of such participation upon the formulation and delivery of rural policies; the kinds of conflicts that arise between various stakeholder groups and the capacity of each group to promote its interests; and the prospects of this new approach for enhanced democratic governance in rural areas.

Understanding the Lived Experiences of Persons with Disabilities in Nine Countries

Active Citizenship and Disability in

Europe

Routledge Over the last three decades, a number of reforms have taken place in European social policy with an impact on the opportunities for persons with disabilities to be full and active members of society. The policy reforms have aimed to change the balance between citizens' rights and duties and the opportunities to enjoy choice and autonomy, live in the community and participate in political decision-making processes of importance for one's life. How do the reforms influence the opportunities to exercise Active Citizenship? This volume presents the findings from the first cross-national comparison of how persons with disabilities reflexively make their way through the world, pursuing their own interests and values. The volume considers how their experiences, views and aspirations regarding participation vary across Europe. Based on retrospective life-course interviews, the volume examines the scope for agency on the part of persons with disabilities, i.e. the extent to which men and women with disabilities are able to make choices and pursue lives they have reasons to value. Drawing on structuration theory and the capability approach, the volume investigates the opportunities for exercising Active Citizenship among men and women in nine European countries. The volume identifies the policy implications of a process-oriented and multi-dimensional approach to Active Citizenship in European disability policy. It will appeal to policymakers and policy officials, as well as to researchers and students of disability studies, comparative social policy, international disability law and qualitative research methods.

World Development Report 1997

The State in a Changing World

World Bank Publications This is the twentieth in the annual series assessing major development issues. The report is devoted to the role and effectiveness of the state:what it should do, how it should do it, and how it can improve in a rapidly changing world. Governments with both centrally-planned and mixed economies are shrinking their market role because of failed state interventions. This report takes an opposite stance:that state's role in the institutional environment underlying the economy, that is, its ability to enforce a rule of law to underpin transactions, is vital to making government contribute more effectively to development. It argues against reducing government to a minimalist state, explaining that development requires an effective state that plays a facilitator role in encouraging and complementing the activities of private businesses and individuals. The report presents a state reform framework strategy:First, focus the state's activities to match its capabilities; and second, look for ways to improve the state's capability by re-invigorating public institutions. Successful and unsuccessful examples of states and state reform provide illustrations.
