Coccodrilli

L'arte di commemorare i campioni dello sport

Absolutely Free Editore Dalla A alla Z per raccontare, nel momento dell'addio, l'alfa e l'omega di una sessantina di personaggi che hanno fatto, scritto, fatto scrivere la storia dello sport, recente e meno. Il genere è quello che in gergo si chiama "coccodrillo" e che, secondo criteri giornalisticamente consolidati, specie per campioni molto avanti con l'età dovrebbe esser pronto da tempo, conservato, pronto all'uso per quando viene recapitata la feroce notizia. In realtà, l'autore ha sempre preferito stendere di getto, giudicando freddo e surgelato il materiale già preparato. L'immediatezza può apparire febbrile ma di certo appartiene alla sfera della sincerità. Subito dopo i personaggi, ordinati in ordine alfabetico in una successione che si apre con Rocco Agostino e si chiude con Emil Zatopek, passando per il grande Mennea e l'indimenticato Enzo Bearzot, un'appendice dedicata a ricorrenze che possono cadere nel repertorio dei "coccodrilli eterni": dalla tragedia del Grande Torino alla morte di Fausto Coppi, dalla scomparsa del titano Adolfo

Consolini all'incidente che spazzò via il Manchester United.

Antonio Giangrande Antonio Giangrande, orgoglioso di essere diverso. ODIO OSTENTAZIONE ED IMPOSIZIONE. Si nasce senza volerlo. Si muore senza volerlo. Si vive una vita di prese per il culo. Tu esisti se la tv ti considera. La Tv esiste se tu la guardi. I Fatti son fatti oggettivi naturali e rimangono tali. Le Opinioni sono atti soggettivi cangianti. Le opinioni se sono oggetto di discussione ed approfondimento, diventano testimonianze. Ergo: Fatti. Con me le Opinioni cangianti e contrapposte diventano fatti. Con me la Cronaca diventa Storia. Noi siamo quello che altri hanno voluto che diventassimo. Facciamo in modo che diventiamo quello che noi avremmo (rafforzativo di saremmo) voluto diventare. Football: The First Hundred Years

The Untold Story

Routledge The story of the creation of Britain's national game has often been told. According to the accepted wisdom, the refined football games created by English public schools in the 1860s subsequently became the sports of the masses. Football, The First Hundred Years, provides a revisionist history of the game, challenging previously widely-accepted beliefs. Harvey argues that established football history does not correspond with the facts. Football, as played by the 'masses' prior to the adoption of the public school codes is almost always portrayed as wild and barbaric. This view may require considerable modification in the light of Harvey's research. Football's First One Hundred Years provides a very detailed picture of the football played outside the confines of the public schools, revealing a culture that was every bit as sophisticated and influential as that found within their prestigious walls. Football, The First Hundred Years sets forth a completely revisionist thesis, offering a different perspective on almost every aspect of the established history of the formative years of the game. The book will be of great interest to sports historians and football enthusiasts alike.

Naval Aviation in World War I

CreateSpace When the call to battle sounded in April 1917, the Navy air arm could muster at its one air station only 48 officers and 239 enlisted men with some experience in aviation, and 54 aircraft none of which was fit for patrol service. The problems of building this small force to a effective fighting unit were enormous. Yet, the Armistice was signed 19 months later, there were 43 air stations in operation at home and abroad, an aircraft factory in production, and numerous schools, assembly plants, repair depots and other facilities providing the needed logistic support. Aviation personnel numbered over 39000, a figure nearly equal to the total in the entire Navy at the start of the war. Little has been published on the nature and extent of Naval air operations in the first World War until, in April 1967, Naval Aviation News began a series of monthly articles under the general title, "Naval Aviation in World War I." Using chronologies of significant events and narrative accounts of special phases of the war, this series told the story of how Naval Aviation met the challenge. The series was conceived by and completed under the direction of the Assistant for Aviation History, Mr. A. O. Van Wyen, who also wrote many of the articles and arranged for the writing of others. While not a definitive history, it is the first published word to deal specifically with the accomplishments of Naval Aviation in the first World War. Based on official sources as well as the recollections of participants, it is authoritatively presented through an interesting combination of official and personal accounts. It is also the history of a beginning made under stress of war---a beginning in which the men of Naval Aviation demonstrated the potential of aviation as an arm of sea power and set the course for its future growth. The success with which they carried out their task is in large measure responsible for the position of aviation at the forefront of Naval power today.

Offside

Soccer and American Exceptionalism

Princeton University Press Soccer is the world's favorite pastime, a passion for billions around the globe. In the United States, however, the sport is a distant also-ran behind football, baseball, basketball, and hockey. Why is America an exception? And why, despite America's leading role in popular culture, does most of the world ignore American sports in return? *Offside* is the first book to explain these peculiarities, taking us on a thoughtful and engaging tour of America's sports culture and connecting it with other fundamental American exceptionalisms. In so doing, it offers a comparative analysis of sports cultures in the industrial societies of North America and Europe. The authors argue that when sports culture developed in the late nineteenth and early twentieth centuries, nativism and nationalism were shaping a distinctly American self-image that clashed with the non-American sport of soccer. Baseball and football crowded out the game. Then poor leadership, among other factors, prevented soccer from competing with basketball and hockey as they grew. By the 1920s, the United States was contentedly isolated from what was fast becoming an international obsession. The book compares soccer's American history to that of the major sports that did catch on. It covers recent developments, including the hoopla surrounding the 1994 soccer World Cup in America, the creation of yet another professional soccer league, and American women's global preeminence in the sport. It concludes by considering the impact of soccer's growing popularity as a recreation, and what the future of sports culture in the country might say about U.S. exceptionalism in general.

The Science of Service Systems

Springer Science & Business Media The Science of Service Systems intends to stimulate discussion and understanding by presenting theory-based research with actionable results. Most of the articles focus on formalizing the theoretical foundations for a science of service systems, examining a wide range of substantive issues and implementations related to service science from various perspectives. From the formal (ontologies, representation specifications, decision-making and maturity models) to the informal (analysis frameworks, design heuristics, anecdotal observations), these contributions provide a snapshot in time of the gradually

emerging scientific understanding of service systems. The Science of Service Systems, along with its companion text, Service Systems Implementation, is designed to present multidisciplinary and multisectoral perspectives on the nature of service systems, on research and practice in service, and on the future directions to advance service science. These two volumes compose a collection of articles from those involved in the emerging area known as service science.

Fastest, Highest, Strongest

A Critique of High-Performance Sport

Routledge Fastest, Highest, Strongest presents a comprehensive challenge to the dominant orthodoxy concerning the use of performance-enhancing drugs in sport. Examining the political and economic transformation of the Olympic Movement during the

twentieth century, the authors argue that the realities of modern sport require a serious reassessment of current policies, in particular the ban on the use of certain substances and practices. The book includes detailed discussion of: * The historical importance of World War II and the Cold War in the development of a high-performance culture in sport * The changing Olympic project: from amateurism to a fully professionalized approach * The changing meaning of "sport" * The role of sport science, technology and drugs in pursuing ever-better performance * The major ethical and philosophical arguments used to support the ban on performance-enhancing substances in sport. *Fastest, Highest, Strongest* is a profound critical examination of modern sport. Its straightforward style will appeal to under- and post-graduate students as well as scholars of sports ethics and history, policy makers and all those interested in the changing nature of sport.

Gender Equality and the Media

A Challenge for Europe

Routledge This edited collection draws on and expands the findings from a pan-European research project undertaken during 2012-13 which was funded by the European Institute for Gender Equality and aimed to explore three key issues in relation to gender and media: women's inclusion in decision-making positions within media industries; how women are represented in the media; and what policies and mechanisms are in place to support women's career development and promote gender equality. The research looked at 99 major media organisations across the EU including public and private sector broadcasters (TV and radio) as well as a number of major newspaper groups. Researchers also monitored TV programmes (factual only but including entertainment genres) across one week and coded 1200 hours of TV. In addition to elaborating the results from 16 of the participating nations, the collection includes a set of context-setting essays and a summarizing conclusion as well as a reflection on the purpose and utility of gender indicators. It is the first major work to look across the European media landscape and explore both employment and representation, providing a unique glimpse into the contemporary media scene in relation to gender equality, including examples of good and less good practice.

Sport, Philosophy, and Good Lives

U of Nebraska Press There's more to sports than the ethos of competition, entertainment, and commercialism expressed in popular media and discourse. Sport, Philosophy, and Good Lives discusses sport in the context of several traditional philosophical questions, including: What is a good human life and how does sport factor into it? To whom do we look for ethical guidance? What makes human activities or projects meaningful? Randolph Feezell examines these questions along with other relevant topics in the philosophy of sport such as the contribution of play to a meaningful life, the various reasons for pessimistic views of sport, the various claims that celebrated athletes are role models, and the seldom-questioned view that coaches are in a position to offer advice to athletes on how to live or on leadership skills. He also discusses the way that non-Western attitudes found in Buddhism, Taoism, and the Bhagavad Gita might be used to address the vulnerabilities of sports participants. Feezell draws from current sports issues, popular literature, and contemporary sports figures to shed light on the attraction and value of sports and examine the accompanying ethical issues.

Psycho-Oncology

American Psychiatric Pub Psycho-oncology integrates research and clinical wisdom across multiple disciplines -- including oncology, psychiatry, psychology, surgery, radiotherapy and palliative care, among others -- in the service of educating oncologists, physicians, psychiatrists and other mental health care providers, and hospital chaplains about the psychological and psychosocial challenges faced by patients with neoplastic disorders. As cancer treatment has improved, the number of patients deemed "cancer survivors" has grown, along with their more complex, long-term mental health issues. This book assists care providers in meeting the challenge presented by this population. Written by international experts in psycho-oncology, the volume offers a compact overview of the clinical elements in this field, with a primary focus on the biopsychosocial aspects of individuals with cancer as well as their families and important people in their lives. Its "bench-to-bedside" approach ensures that the techniques presented are evidence-based, practical, and effective. The following are among the book's many helpful features: The chapters are designed to stand alone, to be shared or consulted as needed, but they also develop a coherent and sequential discussion about management of the patient with cancer, as well as concerns involving the patient's family. Thus, the book as a whole serves as a comprehensive textbook in the field. The book's structure is based on psychosocial staging, much as the disease itself is staged, and progresses from discovery to initial diagnosis, treatment intervention, remission, and so forth. Each phase has its own challenges -- for patient, family, and care provider - - and supportive strategies are offered. Because identifying those patients in need of support and treatment intervention is critical, the authors provide screening techniques, as well as an entire chapter devoted to quality of life assessment, to help clinicians recognize struggling patients and alleviate their distress. A final chapter addresses developing trends in psycho-oncology and suggests that international standards of care for the cancer patient must include competent and compassionate psychosocial assessment and treatment. Concise and clinically focused, yet addressing the broad issues as well, Psycho-oncology offers cutting-edge information and invaluable assistance to physicians and mental health professionals responsible for managing patients, and the families of patients, with neoplastic disorders.

Training the Body for China

Sports in the Moral Order of the People's Republic

University of Chicago Press Competing in the 1986 National College Games of the People's Republic of China, Susan Brownell earned both a gold medal in the heptathlon and fame throughout China as "the American girl who won glory for Beijing University." Now an anthropologist, Brownell draws on her direct experience of Chinese athletics in this fascinating look at the culture of sports and the body in China. Training the Body for China is the first book on Chinese sports based on extended fieldwork by a Westerner. Brownell introduces the notion of "body culture" to analyze Olympic sports as one element in a whole set of Chinese body practices: the "old people's disco dancing" craze, the new popularity of bodybuilding (following reluctant official acceptance of the bikini), mass calisthenics, martial arts, military discipline, and more. Translating official and dissident materials into English for the first time and drawing on performance theory and histories of the body, Brownell uses the culture of the body as a focal point to explore the tensions between local and global organizations, the traditional and the modern, men and women. Her intimate knowledge of Chinese social and cultural life and her wide range of historic examples make Training the Body for China a unique illustration of how gender, the body, and the nation are interlinked in Chinese culture.
