SECURING WATER AND WASTEWATER SYSTEMS

GLOBAL EXPERIENCES

Springer Science & Business Media Urban water and wastewater systems have an inherent vulnerability to both manmade and natural threats and disasters including droughts, earthquakes and terrorist attacks. It is well established that natural disasters including major storms, such as hurricanes and flooding, can effect water supply security and integrity. Earthquakes and terrorist attacks have many characteristics in common because they are almost impossible to predict and can cause major devastation and confusion. Terrorism is also a major threat to water security and recent attention has turned to the potential that these attacks have for disrupting urban water supplies. There is a need to introduce the related concept of Integrated Water Resources Management which emphasizes linkages between land-use change and hydrological systems, between ecosystems and human health, and between political and scientific aspects of water management. An expanded water security agenda should include a conceptual focus on vulnerability, risk, and resilience; an emphasis on threats, shocks, and tipping points; and a related emphasis on adaptive management given limited predictability. Internationally, concerns about water have often taken a different focus and there is also a growing awareness, including in the US, that water security should include issues related to quantity, climate change, and biodiversity impacts, in addition to terrorism. This presents contributions from a group of internationally recognized experts that attempt to address the four areas listed above and includes suggestions as to how to deal with related problems. It also addresses the new and potentially growing issue of cyber attacks against water and waste water infrastructure including descriptions of actual attacks, making it of interest to scholars and policy-makers concerned with protecting the water supply.

PRIMATES

THE ROAD TO SELF-SUSTAINING POPULATIONS

Springer Science & Business Media This conference represents the first time in my life when I felt it was a misfortune, rather than a major cause of my happiness, that I do conservation work in New Guinea. Yes, it is true that New Guinea is a fascinating microcosm, it has fascinating birds and people, and it has large expanses of undisturbed rainforest. In the course of my work there, helping the Indonesian government and World Wildlife Fund set up a comprehensive national park system, I have been able to study animals in areas without any human population. But New Guinea has one serious drawback: it has no primates, except for humans. Thus, I come to this conference on primate conservation as an underprivileged and emotionally deprived observer, rather than as an involved participant. Nevertheless, it is easy for anyone to become interested in primate conservation. The public cares about primates. More specifically, to state things more realistically, many people care some of the time about some primates. Primates are rivaled only by birds, pandas, and the big cats in their public appeal. For some other groups of animals, the best we can say is that few people care about them, infrequently. For most groups of animals, no one cares about them, ever.

CHARACTERIZING THE FUTURE DEFENSE WORKFORCE

Rand Corporation During the early 1990s, the Department of Defense (DoD) began to change its focus from the Cold War to pursue more diverse missions. Questions arose about how future changes in military missions, organizations, and technology would affect the nature of military work and the characteristics of the military and civilian members of the DoD workforce. To address these questions, RAND undertook an occupational-level analysis of the effects of the future environment on the characteristics of DoD work and workers.

LATE CAPITALISM

Verso Late Capitalism represents the first ever attempt to combine the general theory of the 'laws of motion' of the capitalist mode of production developed by Marx with the concrete history of capitalism in the twentieth century. Mandel sketches the structure of the world market and develops a bold schema for the 'long-waves' of expansion and contraction in the history of capitalism.

REDUCING DISASTER RISK

A CHALLENGE FOR DEVELOPMENT- A GLOBAL REPORT

United Nations Reducing Disaster Risk: A Challenge for Development looks at disasters through a "human development" lens. This global Report aims to explain the linkages between development and disaster. It introduces a pioneering Disaster Risk Index (DRI) that measures the relative vulnerability of countries to three key natural hazards - earthquakes, tropical cyclones and floods. It identifies the development factors that contribute to risk, and shows in quantitative terms, just how the effects of disasters can be either reduced or exacerbated by policy choices. (UNDP).
