Parsons' Diseases of the Eye

Elsevier India

Parsons' Diseases of the Eye

Elsevier Health Sciences Parsons' Diseases of the Eye has been a trusted textbook for undergraduate students for more than 100 years. It also caters to the basic needs of postgraduate students and practitioners who need to refer to this book for a quick review of the basic concepts. The book was first published in 1907, and on account of its clear and friendly presentation style as well as its authoritative coverage of ocular disorders, it quickly became a fundamental text for students. Since then the book has maintained its popularity with students through regular revisions and updates. The 19th edition of this book was especially adapted to the context of Indian subcontinent with a special mention about the infections that occur predominantly in this region. The 23rd edition continues this trend by presenting unparalleled guidance on nearly every ophthalmic condition and procedure, including the latest advances in the field, making the book more comprehensive and contemporary. • Compliant with the new competency-based curriculum. • Inclusion of Learning Objectives at the beginning of each chapter. • Three new chapters titled Non Traumatic Ophthalmic Emergencies, Dark Room Procedures and Clinical Investigations added to help students get a clear understanding of these topics. • Additional topics: images on radiology and case studies on various ophthalmic procedures. • Latest information on astigmatism, dry eye, eye donation, eye banking and various national programs has been provided. • Simplified flowcharts and new photographs covering a number of clinical conditions are added features. • Extensively revised and up-to-date with the new curriculum. • New Learning Objectives • Three new chapters on Non Traumatic Ophthalmic Emergencies, Dark Room Procedures and Clinical Investigations • Updated information on astigmatism, dry eye, eye donation, eye banking and various national programs • Images on radiology and case studies on various ophthalmic procedures

Parson's Diseases of the Eye - E-Book

Elsevier Health Sciences A trusted textbook for undergraduate students for more than 100 years, which also caters to the basic needs of postgraduate students and practitioners. The book was first published in 1907, and on account of its clear and friendly presentation style as well as its authoritative coverage of ocular disorders, it quickly became a fundamental text for students. Since then the book has maintained its popularity with students through regular revisions and updates. The 19th edition of this book was especially adapted to the context of Indian subcontinent with a special mention about the infections that occur predominantly in this region. The 22nd edition continues this trend by presenting unparalleled guidance on nearly every ophthalmic condition and procedure, including the latest advances in the field, making the book more comprehensive and contemporary. • Inclusion of Important Points to Remember at the end of the book • Addition of new clinical photographs, flowcharts, and tables to facilitate quick learning • Extensively revised and updated edition • Reader-friendly version with information highlighted in points, flow charts and tables • Information provided to help prepare for PG entrance and other competitive examinations

Comprehensive Manual of Ophthalmology

JP Medical Ltd Comprehensive Manual of Ophthalmology in which sufficient information has been provided in easy-to-understand language with a definite and uniform format. Many tables have been incorporated for summarizing key facts about different diseases. Enough standard colored illustrations will be of immense help. A short list of Further Readings has been added at the end of each chapter for those who want to persue further on the particular topic. I consider this humble endeavor as a mini textbook of ophthalmology in a refreshingly reader-friendly fashion, which I presume will be quite useful for both undergraduate and postgraduate students, residents and even practicing ophthalmologists.

Neuro-Ophthalmology

Elsevier Neuro-Ophthalmology provides information pertinent to the neuro-ophthalmological examination of the eye. This book discusses the anatomy and function of the eye as well as its various diseases. Organized into 17 chapters, this book begins with an overview of the various equipment and methods used in the examination of the eye, including the Snellen's test type, a 13 dioptre lens, and electric ophthalmoscope. This text then discusses the principal reactions of the normal pupil, including the direct light reflex, reflex to accommodation, the spino-pupillary reflex, the psychical reflex, the orbicularis reflex, and the oculo-sensory reflex. Other chapters consider the anatomy of the muscles and nerves of the eye as well as its adnexa. This book discusses as well the condition of optic atrophy and its various types. The final chapter deals with the distinction between headache and neuralgia. This book is a valuable resource for ophthalmic surgeons and ophthalmologists.

Manual of Ophthalmic Diagnosis

JP Medical Ltd The second edition of Manual of Ophthalmic Diagnosis has been fully updated to provide the latest knowledge and understanding of ocular disorders. Beginning with an introduction to differential diagnosis of ocular symptoms and signs, the following chapters describe diagnosis of numerous disorders within in each part of the eye. Each disorder is explained in a step by step format, describing the causes, clinical characteristics, investigation, differential diagnosis and treatment. This new edition includes suggestions for further reading and nearly 350 full colour clinical photographs and illustrations to enhance learning. Key points Fully updated, new edition providing latest developments in ophthalmic diagnosis Describes numerous disorders in each part of the eye Extensive further reading section Includes nearly 350 full colour clinical photographs and illustrations Previous edition published in 2005

Wong's Nursing Care of Infants and Children Australia and New Zealand Edition - E-Book

FOR PROFESSIONALS

Elsevier Health Sciences This new text has been adapted from the highly trusted Wong's Nursing Care of Infants and Children to provide a reference for professional nurses working in paediatric and child and family health settings in Australia and New Zealand. The content covers all aspects of infant, child and adolescent care, including anatomy and physiology, child and adolescent mental health, nursing care guidelines, critical thinking, family-centred care, rural and remote health, cultural and psychosocial considerations, common presenting conditions, and therapeutic management. With input from leading local expert paediatric clinicians and academics, and carefully curated for practising paediatric nurses, and nurses newly entering paediatrics, the text aligns with local professional standards, health policies, legal and ethical considerations and population data. Well-established, comprehensive text that focuses on clinical relevance for professional nurses Covers all aspects of infant, child and adolescent health through an assessment and management approach Foundational information builds a solid knowledge base in paediatric nursing Written to help nurses develop a deeper understanding of the psychosocial needs of infants, children, adolescents and their families Case studies and research questions to build critical thinking skills Aligned to National Safety and Quality Health Service (NSQHS) Standards User-friendly, accessible content suitable for practising paediatric nurses across a variety of clinical settings and geographic locations

Parson's Diseases of the Eye

Butterworth-Heinemann A comprehensive and detailed compendium of ophthalmology, this text for the postgraduate trainee provides a broad overview in a straightforward style. There is little need to refer to larger books except for very detailed knowledge on a specific topic.

Sir Harold Ridley and His Fight for Sight

He Changed the World So that We May Better See it

SLACK Incorporated Did you know that the most common surgical eye procedure today began as a tragic injury to a WWII pilot? Did you know that one of the first medical devices to ever be implanted into a human was performed by an ophthalmologist? Do you know the riveting story behind the man who envisioned and achieved ground-breaking medical advancements for vision care? _____ An innovator in eye surgery and undisputed inventor of the intraocular lens (IOL), Sir Harold Ridley achieved some of the most important discoveries in ophthalmology and medicine over the last 100 years. The compelling story of Sir Harold Ridley is one not widely known among today's medical community. It is a story of an unassuming medical leader. It is a story that needs to be told, not only for its historical value, but also to provide guidance for future generations on bringing new inventions to the world. In the early 1980's, Dr. David J. Apple, one of the most prominent American ophthalmologists and eye researchers conducted studies that by the mid-1980's had verified that Ridley's innovation--the implantation of the IOL--was potentially safe and effective. Upon hearing of these studies, Ridley requested to meet Dr. Apple at Ridley's home in England, where a life-long personal and professional relationship was born. Inside Sir Harold Ridley and His Fight for Sight: He Changed the World So That We May Better See It, Dr. David J. Apple chronicles the amazing career and life of Sir Harold Ridley based on their friendship and on never before published documents, photographs, and memorabilia. Ridley's tremendous impact on ophthalmology and specifically on the treatment of cataract patients, is a story that until now has not been told. Sir Harold Ridley and His Fight for Sight is based on 26 years of research performed by Dr. Apple. Interviews with friends, families, colleagues, as well as the review of medical and hospital records, military records, and museum exhibits have brought the story of Sir Harold Ridley to forefront of the medical community today. Dr. Apple brings life and credibility to the pages of Sir Harold Ridley and His Fight for Sight with over 600 images, testimonials from Sir Harold Ridley on his quest that began in 1935, and a personal touch that only a true colleague and friend can convey. From Harold Ridley, 1989: "I had twenty-five years in the wilderness and would have been spared much suffering if David Apple, the one who at last took the trouble to read and analyze all the early implant papers, had appeared in the 1950's, for a whole generation of cataract patients might then have enjoyed full visual rehabilitation instead of suffering the abnormalities of aphakia." In 1940 during World War II, in the legendary Battle of Britain, a British pilot was tragically blinded when shattered fragments of his cockpit canopy were embedded in his eyes. This tragic event led to the identification of an implant material and eventuated in Ridley's accomplishing a complete cure for cataracts. Ridley focused the next decade of his life on the development of an artificial lens to be implanted following the removal of a cataract. This device has restored vision to nearly 200 million people worldwide, and presently 9 million annually. After performing the first IOL implant on a cataract patient, Sir Harold Ridley was met with opposition from the medical community. It took three decades of struggle until his goal became reality. Now the cataract surgery, and its cousin, refractive surgery, including the procedure LASIK, are the most common surgical procedures performed today. Paving the way for past, current and future ophthalmologists, Sir Harold Ridley not only implanted the first medical device into a patient--he pioneered multiple once in a lifetime discoveries including innovations on river blindness, techniques for optic nerve and retina diagnosis, introduction of television and other electronic techniques to ophthalmology, as well as establishing a branch of biomedical engineering focusing on the science of artificial implants. Sir Harold Ridley and His Fight for Sight is the story of a brilliant man and his lifelong struggle to gain acceptance for his invention from his peers. He finally achieved this late in life and the intraocular lens is now recognized as one of the most important medical advances of the 20th century.

Clinical Diagnosis

A Synopsis of Ophthalmology

Butterworth-Heinemann A Synopsis of Ophthalmology, Fourth Edition provides a comprehensive view of the whole of ophthalmology. This edition includes a chapter on advances in ophthalmology, dealing with such trends as ultrasonography, fluorescein angiography, and use of lasers. The tables of antibiotics and steroids and various proprietary drops commonly used in the treatment of glaucoma are completely updated and revised. This book emphasizes the ocular side-effects of systemic medication in relation to the increasing use of drugs that produce ocular symptoms. The ocular manifestations of general disease, diabetic retinopathy, and ocular symptoms in autism are also discussed. This publication is a good reference for senior medical students and general practitioners interested in the pathology and treatment of the eye.

Century of Genocide

Critical Essays and Eyewitness Accounts

Routledge Through scholarly analyses and eye-witness testimony, Century of Genocide discusses the causes, results, and ramifications of the genocides perpetrated in the 20th century, including, for example, the following: the Armenians in the Ottoman Empire; the Jews, Romani and mentally and physically handicapped during the Holocaust; and such post-Holocaust genocides as those in East Timor, Bangladesh, Cambodia, Iraq, Cambodia and Rwanda. The second edition has been fully updated and features new chapters on the ethnic cleansing and genocide in the former Yugoslavia and the mass killing of the Kurds in Iraq, as well as a chapter on the question of whether or not the situation in Kosovo constituted genocide. It concludes with an essay outlining methods of intervention and prevention of future genocides.

Suntanning in 20th Century America

McFarland The suntan experienced a profound change in the last century. Considered a mark of the lower class for hundreds of years, tanning became a fad in the early 1920s and remains popular today. The tan, though, was much more than a matter of fashion, enjoying at first a boost from the medical establishment. Opinions ranging from hard science to quackery lauded the suntan as something of a panacea. Near the end of World War II, however, researchers increasingly warned against the hazards of overexposure to the sun, and a large new industry developed--sunscreen. Americans' current paradoxical obsession with the tan developed almost entirely from the conflicting rays of twentieth century thought. This history examines the twentieth century suntan as a social and scientific phenomenon. Beginning with the years 1900-1920, it debunks the myth that changing attitudes toward the tan sprang largely from the world of fashion. Initial pro-tanning medical hype, emerging negative opinions of sunbathing near the middle of the century, the development of sunscreens, the debate over sunscreen efficacy, and the sunless tan are all covered here. Numerous pictures demonstrate changing perceptions of the suntan, displaying advertisements for products that promoted, prevented or healed tans.
