TRAUMATIC BRAIN INJURY

REHABILITATION, TREATMENT, AND CASE MANAGEMENT, FOURTH EDITION

CRC Press In the last decade neuroscience has matured at a remarkable pace, shedding a far more exacting light on mechanisms of neurophysiology, pathophysiology of injury, neuroendocrinology, neuro-immunology, neuroplasticity, neuropharmacology and neurodegenerative processes. Individuals with acquired brain injury are treated earlier and now achieve far better recovery than in the past. The fourth edition of this text constitutes a continuation of 20 years of coverage of traumatic brain injury, and broadens the discussion of acquired brain injury. Within TBI, the paradigm shift from an injury occurring at a point in time to a disease entity of a chronic nature is changing the discussion of diagnosis, management, treatment and outcome assessment. Disease specification that differentiates TBIs by the mechanism of injury, the exact nature of the injury, the extent of injury, presence of co-morbidities and their exact nature, gender, age, race, and genome are emerging as crucial. There was a time when cancer was an undifferentiated disease. Disease differentiation has consequently impacted diagnosis, treatment and outcome. This text is intended to serve as a ready reference tool, contributing to the professional growth of each reader, and stimulating innovation and research. It also promotes the continued refinement in the management of diseases of acquired brain injury.

OXFORD HANDBOOK OF GERIATRIC MEDICINE

Oxford University Press, USA The population is ageing, and most diseases are far more common in older people. Older people are particularly difficult to assess and to treat effectively, but are more vulnerable to therapeutic delays or errors. The Oxford Handbook of Geriatric Medicine provides user-friendly advice in a field that has limited evidence, yet makes up a substantial proportion of the work of most clinicians. It includes information required for effective, geriatric practice, in a contemporary, accessible format, indicating where practice differs from that of younger adults, is ill informed by evidence, and where dangers lurk for the inexperienced clinician. Guidance is given on the many ethical and clinical dilemmas common in geriatric practice, where several solutions may appear equally valid. Information ranges from when not to treat, through to providing evidence for where an aggressive approach is needed. Diseases that tend to arise mainly in older

patients are covered in detail, as are problems that arise frequently, yet where advice is scarce. The text is problem based to assist the clinician in tackling scenarios where the diagnosis may not be clear. This is the 'must have' guide to geriatric medicine and will be invaluable to all those involved in the care of the older patient.
