100 Tips to Avoid Mistakes in Academic Writing and Presenting

Springer Nature This book contains one hundred typical mistakes relating to papers, proposals, oral presentations, and correspondence with editors (e.g. journal submissions), reviewers (rebuttal letters), and editing agencies. The book is primarily intended for non-native English speaking researchers. However, it is also useful for editing agencies in order to help new or inexperienced editors spot the kinds of mistakes they need to correct in order to ensure their clients successfully have their papers published. Each section of a paper is covered separately: titles and abstracts; introduction and literature review; methods, results and tables; discussion and conclusions. Teachers of English for Academic Purposes (EAP) will learn which areas of writing and grammar to focus on including readability, word order, sentence length, paragraphing, ambiguity and punctuation. The last section in the book highlights the key areas where presenters make the most mistakes in terms of the use of English. 101 Biggest Mistakes Nonprofits Make and How You Can Avoid Them

Newport One Press Nonprofits are some of the scrappiest organizations you'll ever experience. In many respects, they resemble start-ups. Think about it. Small groups (generally) of highly dedicated, focused believers coming together to achieve something greater than they could ever achieve on their own. They're often cash-strapped, moving faster than their infrastructures can keep up with, and frequently learning and adapting as quickly as they can. The majority of nonprofit staff are able to do so much good with so few resources. The general public has come to expect nonprofits to behave this way. But one thing I've noticed is that unlike the corporate sector, there is little in the way of generally accepted "best practices" across the nonprofit sector. This results in organizations that serially make mistakes — often resulting in detrimental impacts to their staff, their donors, their revenue, and ultimately to the achievement of their mission. In 101 Biggest Mistakes Nonprofits Make and How You Can Avoid Them, you'll hear directly from industry veterans who have over 300 years of combined experience inside nonprofit organizations and leading consulting firms serving nonprofits. They are experts in strategic planning, government relations, leadership, finance and administration, program development, marketing, and philanthropy. Contrary to what the title might suggest, this book is NOT an admonishment of the nonprofit sector and those who make their career within it. Far from it. I know that one of the least-funded areas in the nonprofit sector is staff training and development. That is at the core of what brought me to envision this book, to assemble this group of expert contributors, and to bring this work to market. Everyone makes mistakes, whether you work in the nonprofit sector, the commercial sector, or anywhere in between. In the corporate sector there are entire industries designed to provide coaching and teaching at all levels of an organization, even customized to market niches. These industries help teach leaders how to improve and do their jobs at the highest possible levels. There are also plenty of works outlining best practices in strategy, design, staffing, leadership, management, finance, etc. Roadmaps, if you will, to help corporate executives, leaders, and individual contributors avoid costly mistakes and maximize impact for their

customers and businesses. The same can't yet be said for the nonprofit sector. In this book I've compiled the 101 biggest mistakes that cost nonprofits the most, and given you expert recommendations to help you avoid making these mistakes yourself.

Intelligent Agents V: Agents Theories, Architectures, and Languages

5th International Workshop, ATAL'98, Paris, France, July 4-7, 1998, Proceedings

Springer The leading edge of computer science research is notoriously ?ckle. New trends come and go with alarming and unfailing regularity. In such a rapidly changing ?eld, the fact that research interest in a subject lasts more than a year is worthy of note. The fact that, after ?ve years, interest not only remains, but actually continues to grow is highly unusual. As 1998 marked the ?fth birthday of the International Workshop on Agent Theories, Architectures, and Languages (ATAL), it seemed appropriate for the organizers of the original workshop to comment on this remarkable growth, and re ect on how the ?eld has developed and matured. The ?rst ATAL workshop was co-located with the Eleventh European Conference on Arti?cial Intelligence (ECAI-94), which was held in Amsterdam. The fact that we chose an AI conference to co-locate with is telling: at that time, we expected most researchers with an interest in agents to come from the AI community. The workshop, whichwasplannedoverthesummerof1993,attracted32submissions,andwasattended by 55 people.ATAL was the largest workshop at ECAI-94, and the clear enthusiasm on behalfofthecommunitymadethedecisiontoholdanotherATALworkshopsimple.The ATAL-94proceedingswereformallypublishedinJanuary1995underthetitleIntelligent Agents, and included an extensive review article, a glossary, a list of key agent systems, and — unusually for the proceedings of an academic workshop — a full subject index.
