The Elderly Eyewitness in Court

Psychology Press The majority of research on eyewitness memory has traditionally studied children and young adults. By contrast, this volume is designed to provide an overview of empirical research on the cognitive, social, and health related factors that impact the accuracy of eyewitness testimony given by the elderly. The book takes a lifespan developmental perspective that incorporates research on witnesses of all ages, but uses the findings to focus on issues unique to the elderly. This includes research on recognition memory with lineup identifications and recall memory that occurs when an elderly witness is asked to describe an event in court. The Elderly Eyewitness also examines jurors' reactions to the testimony of an elderly witness, and the legal and social policy issues that emerge when the elderly witness participate in legal proceedings. While reviewing what is known about the elderly witness, the book also provides a direction for future research into this new frontier of scientific inquiry. Its audience spans researchers in cognitive and developmental psychology, and professionals working in the growing area of psychology and law.

The Psychology of Eyewitness Identification

Taylor & Francis This volume provides a tutorial review and evaluation of scientific research on the accuracy and reliability of eyewitness identification. The book starts with the perspective that there are a variety of conceptual and empirical problems with eyewitness identification as a form of forensic evidence, just as there are a variety of problems with other forms of forensic evidence. There is then an examination of the important results in the study of eyewitness memory and the implications of this research for psychological theory and for social and legal policy. The volume takes the perspective that research on eyewitness identification can be seen as the paradigmatic example of how psychological science can be successfully applied to real-world problems.

Memory and Sexual Misconduct

Psychological Research for Criminal Justice

Routledge Memory and Sexual Misconduct: Psychological Research for Criminal Justice investigates the veracity of memories of sexual misconduct and the factors that may influence accurate recall, and fundamentally assesses whether psychological science can help the criminal justice system in determining which accusations are likely to be accurate, and which are not. In recent years, the public has been inundated with announcements of sexual assault allegations, in particular against public figures like politicians, businessmen, movie moguls, and professional athletes. Many of these accusations concern events that occurred several years prior to their announcements and trials. Drawing upon a compilation of real-life sexual assault cases and psychological science on recall and sexual trauma, this book provides an analysis of memory reports of sexual misconduct, including inappropriate comments, behaviors, harassment, and assault. It compares these memories with other types of memory, such as flashbulb memories, co-witness conformity memory, and autobiographical memory. Memory and Sexual Misconduct helps readers interpret the role of emotion, the level of detail, and the possible distinction between someone remembering a past event and believing the past event occurred. By providing a thorough evaluation of the likelihood that misconduct memories are accurate and investigating factors that affect this accuracy, Memory and Sexual Misconduct is an invaluable text to both the criminal justice system and the general public, particularly as sexual misconduct allegations of past events continue to come to light.

FORENSIC INTERVIEWING IN CRIMINAL COURT MATTERS

A Guide for Clinicians

Charles C Thomas Publisher Forensic mental health assessment has essentially become synonymous with forensic psychological assessment. This necessary shift toward empirically grounded procedures has had the unfortunate by-product of diminishing the importance of the clinical interview in favor of procedures biased in the direction of rigid structure and statistical formulas. In contrast, the authors' approach to forensic mental health places the individual front and center in the assessment process. The need to treat the interviewee as an individual rather than a member of some statistically defined group is the recurring theme of this book. As much as possible, the text is focused on the interview proper. Issues related to the broader topic of forensic assessment are discussed as necessary to provide context. Although the issues discussed apply equally in civil and family court settings, the focus is on the criminal justice system. This is not a "how to" book but rather focuses primarily on the interview process and on general areas of inquiry. The text is organized into three sections: (1) general issues, (2) specific applications, and (3) special populations. Section 1 provides a conceptual foundation for the book by comparing and contrasting clinical and forensic interview strategies. Further, it introduces the concept of idiographic model construction central to the authors' approach to interviewing and also addresses the thorny issues of malingering and response bias. The section closes with a discussion of practical considerations and technical issues applicable to forensic interviews. In section 2, the focus is narrowed to three criminal justice settings: retrospective insanity offenses, here and now adjudicative competency assessments, and forward-looking predisposition assessments. The final section further narrows its focus with chapters on interviewing sexual, violent, and adolescent offenders, as well as a chapter on third-party sources of information in forensic mental health evaluations. The book will serve as a valuable resource for a variety of mental health professionals as well as criminal justice administrators.

Forensic Psychology Reconsidered

A Critique of Mental Illness and the Courts

Routledge Forensic psychology is where psychology meets the criminal justice system. An understanding of the intersection of criminal law and psychological issues relating to criminal responsibility is critical for criminal justice students. This accessible text focuses on the criminal law implications of forensic psychology as it relates to topics such as competency to stand trial, state of mind at the time of the crime, suicide by cop, and involuntary psychiatric medication administered in custody. Unlike more traditional texts on this topic, which are primarily concerned with the clinical practice of forensic

psychology, this book focuses on critical thinking as it relates to these topics. Each chapter presents a critical analysis of the topic under study, going beyond merely identifying the legal parameters of criminal responsibility to explore the ethical, philosophical, and theoretical foundations of that concept.

Sex Offenders in the Community

Routledge This book explores current criminal justice responses to the management of individuals who are convicted of sexual offences. It aims to help policy-makers, practitioners and students to develop an informed position on this complex and increasingly controversial issue. Although the focus is primarily upon the UK context, contributions from North America (USA and Canada) provide an important comparative perspective.

Routledge Methods, Measures, and Theories in Eyewitness Recognition Tasks provides a comprehensive review of the fundamental issues surrounding eyewitness recognition phenomena alongside suggestions for developing a more methodologically rigorous eyewitness science. Working with Trauma-exposed Children and Adolescents

Evidence-based and Age-appropriate Practices

Far too often, children and youth experience trauma, from rare events such as mass shootings, terrorism attacks, and school lockdowns, to very common occurrences such as bullying, exposure to drugs and alcohol, or various mental health issues. They can experience these events both directly and indirectly (from surfing the internet, watching television, or through their friends). Our children spend a large portion of their day at school interacting with other students, teachers, and school personnel, where these topics are raised and discussed. This edited volume addresses how our teachers and school personnel can help students deal with these potentially traumatic events to reach the most positive possible outcomes. This collection brings together leading experts, including academics and professionals working in the field, to provide the most current evidence-based practices on how to help students who may have experienced or witnessed trauma. It presents research and advice on how to respond to traumatic events regarding bullying; drugs and alcohol; sexual abuse; mental health; lesbian, gay, bisexual, transgender, and queer (LGBTQ) safety; stranger danger; childhood disruptive behaviors; school shootings and lockdowns; and terrorism. It also includes a chapter focused on how to implement a school safety program. Schools cannot deal with these issues alone; effective strategies must engage family members and the broader community. Hence, the collection includes a chapter on how schools can partner with families and the communities they reside in to bring about positive change. All this work pays close attention to cultural and religious sensitivity, socio-economic variabilities, diversity issues, and developmental stages.

Discussing difficult but relevant issues including forensic assessment, legal ramifications, mental health, risk assessment, and effects on family life, this book is geared towards researchers, mental health professionals, clinicians, and special educators seeking current research on prevention, assessment, and rehabilitation in sexual abuse.

Finding the Truth in the Courtroom

Dealing with Deception, Lies, and Memories

Oxford University Press In many criminal trials, forensic technical evidence is lacking and triers of fact must rely on the reliability of eyewitness statements, identifications, and testimony; however, such reports can be riddled with deceptive statements or erroneous recollections. Based on such considerations, the question arises as to how one should weigh such eyewitness accounts given the theoretical and empirical knowledge in this field. Finding the Truth in the Courtroom focuses on how legal professionals, legal/forensic psychologists, and memory researchers can decide when statements or identifications are based on truthful or fabricated experiences and whether one can distinguish between lies, deception, and false memories. The contributors, key experts in the field, assemble recent experimental work and case studies in which deception or false memory plays a dominant role. Topics discussed relate to the susceptibility to suggestive pressure (e.g., "Under which circumstances are

children or adults the most vulnerable to suggestion?"), the fabrication of symptoms (e.g., "How to detect whether PTSD symptoms are malingering?"), and the detection of deceit (e.g., "Which paradigms are promising in deception detection?"), among others. By using this approach, this volume unites diverse streams of research (i.e., deception, malingering, false memory) that are involved in the reliability of eyewitness statements.

Familiarity and Conviction in the Criminal Justice System

Definitions, Theory, and Eyewitness Research

Oxford University Press Eyewitness research has focused mainly on stranger identification, but identification is also critical for the "familiar stranger", and understanding how variability in an eyewitness's familiarity with the perpetrator may influence recall and recognition accuracy will facilitate swifter and more just resolutions to crime. *Familiarity and Conviction in the Criminal Justice System* examines the notion of familiarity between an eyewitness/victim and a perpetrator, ranging from complete unfamiliarity (as with a total stranger) to a very familiar other. Authors Joanna Pozzulo, Emily Pica, and Chelsea Sheahan define what is meant by "familiarity" in an eyewitness context and how it has been operationalized and manipulated, exploring factors that may interact with familiarity and examining jurors' perceptions of it. The first half of the book draws on various sub-areas of psychology to understand familiarity against the backdrop of eyewitness identification: social psychology theories of how familiarity is established; cognitive psychology and its theories of recognition; face processing literature; and eyewitness literature. The second half of the book surveys system and estimator variables that influence identification, such as lineup procedures, interviewing techniques, the role of age, race, and more; as well as how familiarity is weighed in juror decision-making. A final chapter issues a call for continuing research examining the notion of familiarity and its impact on the criminal justice system.
