Making Space for the Dead Catacombs, Cemeteries, and the Reimagining of Paris, 1780-1830 *Cornell University Press* The dead of Paris, before the French Revolution, were most often consigned to mass graveyards that contemporaries described as terrible and terrifying, emitting "putrid miasmas" that were a threat to both health and dignity. In a book that is at once wonderfully macabre and exceptionally informative, Erin-Marie Legacey explores how a new burial culture emerged in Paris as a result of both revolutionary fervor and public health concerns, resulting in the construction of park-like cemeteries on the outskirts of the city and a vast underground ossuary. *Making Space for the Dead* describes how revolutionaries placed the dead at the center of their republican project of radical reinvention of French society and envisioned a future where graveyards would do more than safely contain human remains; they would serve to educate and inspire the living. Legacey unearths the unexpectedly lively process by which burial sites were reimagined, built, and used, focusing on three of the most important of these new spaces: the Paris Catacombs, Père Lachaise cemetery, and the short-lived Museum of French Monuments. By situating discussions of death and memory in the nation's broader cultural and political context, as well as highlighting how ordinary Parisians understood and experienced these sites, she shows how the treatment of the dead became central to the reconstruction of Parisian society after the Revolution.

The respiratory system is unique in that it is constantly exposed to a barrage of foreign substances from both the internal environment (at any one point in time, approximately one-half of the cardiac output is received by the lungs) and the external environment (with each breath, the respiratory tract is exposed to pollens, viruses, bacteria, smoke, etc). According to the Centers for Disease Control and Prevention, diseases of the respiratory system were the seventh and eighth leading causes of deaths in children aged 1 to 19 years in 2003 [1]. Dr. George A. Gregory, one of the founding fathers of pediatric critical care medicine, once estimated that acute respiratory failure accounts for nearly 50% of all admissions to the pediatric intensive care unit (PICU) [2]. Just as important are the many diseases that affect the respiratory system that are not associated with acute respiratory failure, but nevertheless constitute a major portion of the

practice of pediatric critical care medicine, some of which account for significant morbidity and mortality [3]. Once again, we would like to dedicate this textbook to our families and to the physicians and nurses who provide steadfast care every day in pediatric intensive care units across the globe. Derek S. The Play of Space Spatial Transformation in Greek Tragedy *Princeton University Press* Is "space" a thing, a container, an abstraction, a metaphor, or a social construct? This much is certain: space is part and parcel of the theater, of what it is and how it works. In *The Play of Space*, noted classicist-director Rush Rehm offers a strikingly original approach to the spatial parameters of Greek tragedy as performed in the open-air theater of Dionysus. Emphasizing the interplay between natural place and fictional setting, between the world visible to the audience and that evoked by individual tragedies, Rehm argues for an ecology of the ancient theater, one that "nests" fifth-century theatrical space within other significant social, political, and religious spaces of Athens. Drawing on the work of James J. Gibson, Kurt Lewin, and Michel Foucault, Rehm crosses a range of disciplines--classics, theater studies, cognitive psychology, archaeology and architectural history, cultural studies, and performance theory--to analyze the phenomenology of space and its transformations in the plays of Aeschylus, Sophocles, and Euripides. His discussion of Athenian theatrical and spatial practice challenges the contemporary view that space represents a "text" to be read, or constitutes a site of structural dualities (e.g., outside-inside, public-private, nature-culture). Chapters on specific tragedies explore the spatial dynamics of homecoming ("space for returns"); the opposed constraints of exile ("eremitic space" devoid of normal community); the power of bodies in extremis to transform their theatrical environment ("space and the body"); the portrayal of characters on the margin ("space and the other"); and the tragic interactions of space and temporality ("space, time, and memory"). An appendix surveys pre-Socratic thought on space and motion, related ideas of Plato and Aristotle, and, as pertinent, later views on space developed by Newton, Leibniz, Descartes, Kant, and Einstein. Eloquently written and with Greek texts deftly translated, this book yields rich new insights into our oldest surviving drama.
