Language Assessment Literacy and the Professional Development of Pre-Service Foreign Language Teachers Editorial Universidad de Caldas Language teachers the world over inevitably need to engage in assessing their students' language ability for various purposes - diagnostic, progress, achievement, etc. Because language assessment is a major task for language teachers, language teaching programs should provide pre-service teachers with opportunities to problematize assessment in the foreign or second language classroom. Educating pre-service teachers for assessment should lead to positive consequences on their in-service work. In this book, the author provides a research-based approach to plan, design, implement, and evaluate a language assessment course for pre-service teachers. The following are some of the central issues addressed in the book: • A conceptualization of Language Assessment Literacy (LAL) -the central construct in the book- and its relationship with language teachers' professional development. • A theoretically and empirically driven approach for planning and designing a language assessment course. • A hands-on approach to teaching language assessment to pre-service language teachers. • Suggestions for teaching the design of assessments for the four language skills. • Suggestions for language teacher educators to discuss and derive ideas for assessment in their language teaching programs. • Real sample items and tasks for teaching and assessing pre-service teachers' LAL. The author constantly invites teacher educators to reflect upon the theory, research, and practice presented in the book. In doing so, he encourages these stakeholders to plan and teach language assessment courses that foster the LAL of pre-service teachers', an overlooked stakeholder group in LAL discussions. Professional Development For Educational Management McGraw-Hill Education (UK) This book begins from the perspective that organizational effectiveness will be improved if the individuals within the organization are engaged in developing professionally. It takes the individual as the key resource of

any institution and the notion of professional development as the key to the learning of educational managers. This book offers both theoretical and practical perspectives on the key components of professional development linking reflection and knowledge with skills and capabilities. It then takes educational managers on to consider the systems and tasks which they have to undertake in managing the professional development of others - from selecting the right person for the job to setting up appropriate appraisal systems. This book provides educational managers and those interested in the field with an introduction to the processes and skills which they will need in managing educational establishments both now and in the future. This volume forms part of the Leadership and Management in Education series. This four book series provides a carefully chosen selection of high quality readings on key contemporary themes in educational management: professional development, reflection on practice, leadership, team working, effectiveness and improvement, quality, strategy and resources. The series will be an important resource for classroom teachers and lecturers as well as those holding designated management posts in schools and colleges and will provide a valuable basis for professional development programmes.

Problem Solving in Mathematics Instruction and Teacher Professional Development Springer Nature Recent research in problem solving has shifted its focus to actual classroom implementation and what is really going on during problem solving when it is used regularly in classroom. This book seeks to stay on top of that trend by approaching diverse aspects of current problem solving research, covering three broad themes. Firstly, it explores the role of teachers in problem-solving classrooms and their professional development, moving onto—secondly—the role of students when solving problems, with particular consideration of factors like group work, discussion, role of students in discussions and the effect of students' engagement on their self-perception and their view of mathematics. Finally, the book considers the question of problem solving in mathematics instruction as it overlaps with problem design, problem-solving situations, and actual classroom implementation. The volume brings together diverse contributors from a variety of countries and with wide and varied experiences, combining the voices of leading and developing researchers. The book will be of interest to any reader keeping on the frontiers of research in problem solving, more specifically researchers and graduate students in mathematics education, researchers in problem solving, as well as teachers and practitioners.

The Professional Development of Teachers: Practice and Theory Springer Science & Business Media Hopkins, Bruce Joyce, Michael Huberman, Matthew Miles, and Virginia Richardson. But we have chosen to present our own experience and empirical data first and then, in Part 3, to show how this experience and data relates to models which have been proposed by others. We will address here methodological issues concerned with collecting and interpreting evidence of relationships amongst the many individual and situational factors associated with PD,

and re-visit the arguments about ‘process-product’ research on PD. In the light of our experience, we will interrogate models of PD which have been proposed by others and attempt to move forward our total understanding of the process of the professional development of teachers for educational change. In conclusion, we will look at some current national practice in professional development, concentrating on the recent English experience of introducing ‘strategies’ into schools but referring also, by way of contrast, to the situation in the United States. **WHAT’S THE PROBLEM? Why has the professional development of teachers already exercised so many good minds for so long? And how can we justify adding another book to this field? The answer to both questions must lie in the continuing demand from society in general (at least as interpreted by politicians and newspaper editors) for improvements in the quality of education.**

Visions from Professional Development School Partners Connecting Professional Development and Clinical Practice IAP Rich clinical preparation combined with progressive experiences in professional development school (PDS) settings are proposed to bring about systemic and impactful transformation of educator preparation and professional growth in order to improve and enhance P-12 student learning. In this book, diverse authors describe their efforts to forge PDS partnerships to develop and deliver high quality training and practical experiences for candidates, and simultaneously provide professional development for experienced practitioners in ways that mirror recommendations found in authoritative reports and literature. The authors’ collective wisdom is vividly captured in the multi-voiced chapters that are collaborations between cooperating teachers, school administrators, county and district level administrators, university supervisors, and instructional faculty. The contexts authors write about are recognizable, and the accomplishments they experienced and challenges faced will resonate with institutions courageously undertaking change or renewal. The book will be invaluable to school and university faculty and administrators as they transition to a partnering model of clinical preparation for teacher candidates: it will help stakeholders decide if their schools and institutions are ready to commit to a partnership, and highlight the benefits they stand to gain, but realistically address challenges that may be faced by administrators and

faculties as well as teacher candidates in the PDS enterprise. **Mathematics Professional Development Improving Teaching Using the Problem-Solving Cycle and Leadership Preparation Models Teachers College Press** This resource will help school leaders and other professional development providers conduct ongoing, structured learning opportunities for mathematics teachers (K-12). The Problem-Solving Cycle model and the Mathematics Leadership Preparation model focus on topics of primary interest to mathematics teachers - mathematics content, classroom instruction, and student learning. They are intentionally designed so that they can be tailored to meet the needs and interests of participating teachers and schools. Through engaging vignettes, the authors describe the models, summarize key research findings, and share lessons learned. The book also includes detailed examples of workshop activities for both teachers and PD leaders.
