STRENGTHENING FORENSIC SCIENCE IN THE UNITED STATES

A PATH FORWARD

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

WILDLIFE 2001: POPULATIONS

Springer Science & Business Media In 1984, a conference called Wildlife 2000: Modeling habitat relationships of terrestrial vertebrates, was held at Stanford Sierra Camp at Fallen Leaf Lake in the Sierra Nevada Mountains of California. The conference was well-received, and the published volume (Verner, J. , M. L. Morrison, and C. J. Ralph, editors. 1986. Wildlife 2000: modeling habitat relationships of terrestrial vertebrates, University of Wisconsin Press, Madison, Wisconsin, USA) proved to be a landmark publication that received a book award by The Wildlife Society. Wildlife 2001: populations was a followup conference with emphasis on the other major biological field of wildlife conservation and management, populations. It was held on July 29-31, 1991, at the Oakland Airport Hilton Hotel in Oakland, California, in accordance with our intent that this conference have a much stronger international representation than did Wildlife 2000. The goal of the conference was to bring together an international group of specialists to address the state of the art in wildlife population dynamics, and set the agenda for future research and management on the threshold of the 21st century. The mix of specialists included workers in theoretical, as well as practical, aspects of wildlife conservation and management. Three general sessions covered methods, modelling, and conservation of threatened species.

A FOODIE'S GUIDE TO CAPITALISM

UNDERSTANDING THE POLITICAL ECONOMY OF WHAT WE EAT

NYU Press Capitalism drives our global food system. Everyone who wants to end hunger, who wants to eat good, clean, healthy food, needs to understand capitalism. This book will help do that. In his latest book, Eric Holt-Giménez takes on the social, environmental, and economic crises of the capitalist mode of food production. Drawing from classical and modern analyses, A Foodie's Guide to Capitalism introduces the reader to the history of our food system and to the basics of capitalism. In straightforward prose, Holt-Giménez explains the political economics of why—even as local, organic, and gourmet food have spread around the world—billions go hungry in the midst of abundance; why obesity is a global epidemic; and why land-grabbing, global warming, and environmental pollution are increasing. Holt-Giménez offers emblematic accounts—and critiques—of past and present-day struggles to change the food system, from "voting with your fork," to land occupations. We learn about the potential and the pitfalls of organic and community-supported agriculture, certified fair trade, microfinance, land trusts, agrarian reform, cooperatives, and food aid. We also learn about the convergence of growing social movements using the food system to challenge capitalism. How did racism, classism, and patriarchy become structural components of our food system? Why is a rational agriculture incompatible with the global food regime? Can transforming our food system transform capitalism? These are questions that can only be addressed by first understanding how capitalism works.

MODERN SCIENCE

THE SIXTH EXTINCTION

AN UNNATURAL HISTORY

A&C Black "Over the last half billion years, there have been five major mass extinctions, when the diversity of life on Earth suddenly and dramatically contracted. Scientists are currently monitoring the sixth extinction, predicted to be the most devastating since the asteroid impact that wiped out the dinosaurs. This time around the cataclysm is us. In this book the author tells us why and how human beings have altered life on the planet in a way no species has before. She provides a moving account of the disappearances of various species occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up to Lyell and Darwin, and through the present day. The sixth extinction is likely to be mankind's most lasting legacy, compelling us to rethink the fundamental question of what it means to be human". -- Back cover.

THE GLOBAL GUIDE TO ANIMAL PROTECTION

University of Illinois Press Raising awareness of human indifference and cruelty toward animals, The Global Guide to Animal Protection includes more than 180 introductory articles that survey the extent of worldwide human exploitation of animals from a variety of perspectives. In addition to entries on often disturbing examples of human cruelty toward animals, the book provides inspiring accounts of attempts by courageous individuals—including Jane Goodall, Shirley McGreal, Birute Mary Galdikas, Richard D. Ryder, and Roger Fouts—to challenge and change exploitative practices. As concern for animals and their welfare grows, this volume will be an indispensable aid to general readers, activists, scholars, and students interested in developing a keener awareness of cruelty to animals and considering avenues for reform. Also included is a special foreword by Archbishop Desmond Tutu, urging readers to seek justice and protection for all creatures, humans and animals alike.

CONCEPTS OF BIOLOGY

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.
