A Field Guide to Genetic Programming

Lulu.com **Genetic programming (GP) is a systematic, domain-independent method for getting computers to solve problems automatically starting from a high-level statement of what needs to be done. Using ideas from natural evolution, GP starts from an ooze of random computer programs, and progressively refines them through processes of mutation and sexual recombination, until high-fitness solutions emerge. All this without the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human-competitive results and applications, including novel scientific discoveries and patentable inventions. This unique overview of this exciting technique is written**

by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book.

An Introduction to Human Factors Engineering

For undergraduate courses in Human-Factors Engineering, Human-Computer Interaction, Engineering Psychology, or Human-Factors Psychology. Offering a somewhat more psychological perspective than other human factors books on the market, this text describes the capabilities and limitations of the human operator-both physical and mental-and how these should be used to guide the design of systems with which people interact. General principles of human-system interaction and design are presented, and included are specific examples of successful and unsuccessful interactions. It links theories of human performance that underlie the principles with real-world experience, without a heavy engineering-oriented perspective.

How To Fly A Horse

The Secret History of Creation, Invention, and Discovery

Random House **WINNER OF THE 800-CEO-READ BUSINESS BOOK OF THE YEAR 2015** In the vein of Susan Cain's QUIET and Malcolm Gladwell's DAVID AND GOLIATH, HOW TO FLY A HORSE is a smart, empowering book that dispels the myths around genius and creativity. There is a myth about how something new comes to be; that geniuses have dramatic moments of insight where great things and thoughts are born whole. Symphonies are composed complete. Science is accomplished with eureka shrieks. Businesses are built by

magic touch. The myth is wrong. Anyone can create. Acclaimed technology pioneer Kevin Ashton takes us behind the scenes of creation to reveal the true process of discovery and how 'new' comes to be. From Archimedes to Apple, from Kandinsky to the Coke can, from the Wright brothers - who set out to 'fly a horse' - to Woody Allen, he exposes the seemingly unremarkable individuals, gradual steps, multiple failures and countless ordinary and often uncredited acts that led to our most astounding breakthroughs.

Inequality, Crime and Public Policy (Routledge Revivals)

Routledge First published in 1979, *Inequality, Crime, and Public Policy* integrates and interprets the vast corpus of existing research on social class, slums, and crime, and presents its own findings on these matters. It explores two major questions. First, do policies designed to redistribute wealth and power within capitalist societies have effects upon crime? Second, do policies created to overcome the residential segregation of social classes have effects on crime? The book provides a brilliantly comprehensive and systematic review of the empirical evidence to support or refute the classic theories of Engles, Bonger, Merton, Cloward and Ohlin, Cohen, Miller, Shaw and McKay, amongst many others. Braithwaite confronts these theories with evidence of the extent and nature of white collar crime, and a consideration of the way law enhancement and law enforcement might serve class interest.

Implantable Cardioverter-Defibrillator

A Practical Manual

Springer Science & Business Media ICD therapy has become the standard form of treatment for ventricular tachyarrhythmias. With clinical data showing its efficacy in both secondary and primary prevention of premature sudden death, its use is likely to increase dramatically in the next decade. Technological advancement has been instrumental in simplifying ICD implantation. However, technical additions to the device have also made its scope of functions more complex. In addition to providing rapid and effective therapy for ventricular tachycardia and fibrillation, the ICD is now capable of providing a full spectrum dual-chamber pacing as well as therapies for atrial fibrillation. Soon, it will also be able to provide treatment for congestive heart failure using multi-site ventricular pacing and provide continuous hemodynamic monitoring. This book serves as an introductory text to those who

are relatively new to this technology. In its manual form, it outlines the pertinent components of ICD functions and the basic differences among the various models. It provides practical points in ICD implantation, and in its programming and trouble-shooting.

Annual Report of the Commissioner of Patents

Milton, Marvell, and the Dutch Republic

Routledge The tumultuous relations between Britain and the United Provinces in the seventeenth century provide the backdrop to this book, striking new ground as its transnational framework permits an overview of their intertwined culture, politics, trade, intellectual exchange, and religious debate. How the English and Dutch understood each other is coloured by these factors, and revealed through an imagological method, charting the myriad uses of stereotypes in different genres and contexts. The discussion is anchored in a specific context through the lives and works of John Milton and Andrew Marvell, whose complex connections with Dutch people and society are investigated. As well as turning overdue attention to neglected Dutch writers of the period, the book creates new possibilities for reading Milton and Marvell as not merely English, but European poets.

Reflexive Ethnography

A Guide to Researching Selves and Others

Routledge Reflexive Ethnography is a unique guide to ethnographic research for students of anthropology and related disciplines. It provides practical and comprehensive guidance to ethnographic research methods, but also encourages students to develop a critical understanding of the philosophical basis of ethnographic authority. Davies examines why reflexivity, at both personal and broader cultural levels, should be integrated into ethnographic research and discusses how this can be accomplished for a variety of research methods. This revised and updated second edition includes: a new chapter on internet-based research and 'interethnography' chapters on selection of topics and methods, data collection and analysis, and ethics and politics of research practical advice on writing up ethnographic study new and updated research examples. Postmodernist relativism can lead to an over-emphasis on reflexivity that denies the possibility of social research. Reflexive Ethnography utilises postmodernist insights - incorporation of different standpoints, exposure of the intellectual tyranny of meta-narratives - but proposes that reflexive ethnographic research be undertaken from a realist perspective. Reflexive Ethnography will help students to use and understand ethnographic research practices that fully incorporate reflexivity without abandoning claims to develop valid knowledge of social reality.

Bio-Inspired Innovation and National Security

NDU Press Despite the vital importance of the emerging area of biotechnology and its role in defense planning and policymaking, no definitive book has been written on the topic for the defense policymaker, the military student, and the private-sector bioscientist interested in the "emerging opportunities market" of national security. This edited volume is intended to help close this gap and provide the necessary backdrop for thinking strategically about biology in defense planning and policymaking. This volume is about applications of the biological sciences, here called "biologically inspired innovations," to the military. Rather than treating biology as a series of threats to be dealt with, such innovations generally approach the biological sciences as a set of opportunities for the military to gain strategic advantage over adversaries. These opportunities range from looking at everything from genes to brains, from enhancing human performance to creating renewable energy, from sensing the environment around us to harnessing its power.

Biokerosene

Status and Prospects

Springer This book provides a detailed overview of aspects related to the overall provision chain for biokerosene as part of the global civil aviation business. Starting with a review of the current market situation for aviation fuels and airplanes and their demands, it then presents in-depth descriptions of classical and especially new types of non-edible biomass feedstock suitable for biokerosene provision. Subsequent chapters discuss those fuel provision processes that are already available and those still under development based on various biomass feedstock materials, and present e.g. an overview of the current state of the art in the production of a liquid biomass-based fuel fulfilling the specifications for kerosene. Further, given the growing interest of the aviation industry and airlines in biofuels for aviation, the experiences of an air-carrier are presented. In closing, the book provides a market outlook for biokerosene. Addressing a broad range of aspects related to the pros and cons of biokerosene as a renewable fuel for aviation, the book offers a unique resource.

Hereditary Hemorrhagic Telangiectasia

Recent Advances and Future Challenges

MDPI Hereditary hemorrhagic telangiectasia (HHT) is an inherited disease that affects the blood vessels, and is characterized by direct connections between arteries and veins with no intervening capillaries. These abnormal vessels may appear in the skin as tiny red dilated blood vessels in the mouth, lips, fingers and toes. The presence of these vascular lesions in the mucosa can lead to spontaneous and recurrent nose bleeding, typically beginning in mid-childhood, and this is the most common clinical manifestation of HHT, occurring in over 90% of patients. Gastrointestinal bleeding, derived from mucocutaneous vascular lesions, affects approximately 25% of patients, almost always presenting after the age of 50. Chronic nasal and gastrointestinal bleeding can cause iron-deficiency anemia, and current therapeutic strategies are trying to minimize iron and blood transfusions. HHT patients also present large vascular lesions, known as arteriovenous malformations, that occur in internal organs like lungs, liver, and brain, and may result in life-threatening complications often related to the shunting of blood. This book not only highlights the current knowledge regarding diagnosis and treatment of HHT, but also the newest insights in the molecular basis of HHT, the understanding of which is essential for the development of new medicines or therapeutic strategies.
