**Consciousness** *Springer Science & Business Media* The computer unlike other inventions is universal; you can use a computer for many tasks: writing, composing music, designing buildings, creating movies, inhabiting virtual worlds, communicating... This popular science history isn't just about technology but introduces the pioneers: Babbage, Turing, Apple's Wozniak and Jobs, Bill Gates, Tim Berners-Lee, Mark Zuckerberg. This story is about people and the changes computers have caused. In the future ubiquitous computing, AI, quantum and molecular computing could even make us immortal. The computer has been a radical invention. In less than a single human life computers are transforming economies and societies like no human invention before. **Transitions to**

**Alternative Vehicles and Fuels** *National Academies Press* For a century, almost all light-duty vehicles (LDVs) have been powered by internal combustion engines operating on petroleum fuels. Energy security concerns about petroleum imports and the effect of greenhouse gas (GHG) emissions on global climate are driving interest in alternatives. *Transitions to Alternative Vehicles and Fuels* assesses the potential for reducing petroleum consumption and GHG emissions by 80 percent across the U.S. LDV fleet by 2050, relative to 2005. This report examines the current capability and estimated future performance and costs for each vehicle type and non-petroleum-based fuel technology as options that could significantly contribute to these goals. By analyzing scenarios that combine various fuel and vehicle pathways, the report also identifies barriers to implementation of these technologies and suggests policies to achieve the desired reductions. Several scenarios are promising, but strong, and effective policies such as research and development, subsidies, energy taxes, or regulations will be necessary to overcome barriers, such as cost and consumer choice. **Advances in Battery Technologies for Electric Vehicles**

It can grow as an export platform for GVCs, specializing in low value-added assembly functions with industrialization occurring in enclaves with little connection to the broader economy or society; or it can leverage the current wave of growth, enabled and accelerated by its successful

participation in GVCs, to diversify and move up the chain into higher value-added functions. Success will require Vietnam's policymakers to view the processes of development differently, and to take new realities of the global economy more fully into account. The purpose of this volume is to support Vietnam's path to economic prosperity by identifying policies and targeted interventions that will drive development through leveraging GVC participation that take major shifts in trade policy and rapid technological advances in ICT into account. The volume is based on a compilation of studies completed by World Bank staff and external consultants in 2015 supporting the "Enabling Economic Modernization and Private Sector Development" chapter of the Vietnam 2035 report. The objective of these studies was to diagnose Vietnam's current participation in GVCs, visualize where Vietnam could be by 2035 in the context of a changing global environment, and identify the policy actions needed to get there. The studies also supported topics related more broadly to export competitiveness, including firm-level productivity, services, and connectivity. It then identifies targeted strategies and policy interventions that will help overcome challenges, minimize risks, and maximize opportunities. Readers will gain a strong understanding of Vietnam's current and potential engagement with GVCs—and will learn about strategic GVC policy tools that can help developing countries achieve economic prosperity in the context of compressed development.

It covers exemplary case studies highlighting challenges related to the implementation of wearable robots for different purposes, and describing advanced solutions. Based on the 5th International Symposium on Wearable Robotics, WeRob2020, and on WearAcon Europe 2020, which were both held online on October 13-16, 2020, the book addresses a large audience of academics and professionals working in for the government, in the industry, and in medical centers,

as well as end-users alike. By merging together engineering, medical, ethical and industrial perspectives, it offers a multidisciplinary, timely snapshot of the field of wearable technologies. **New Products Management** McGraw-Hill/Irwin Taking a managerial approach, in order to acquaint students with the managerial steps and processes involved in new product development, this work includes coverage of product protocol. **New Generation of Electric Vehicles** There is an unprecedented surge of interest in and the desire of producing gaselectric hybrid (HEVs) and all-electric vehicles (EVs) by the governments and public in the industrialized countries. This surge of interest and desire is attributed to several factors relating to the life-threatening air pollution in many parts of the world, the high petroleum price, conflicts in oil producing Middle East regions and the alarming trend of global warming due to rapid increase of greenhouse gas emissions by all sources, including those from transportation. Full electric vehicles use no gasoline; they are powered by a high-voltage electric motor and battery pack. All the elements are now in place to tackle fairly complex static rigid body problems. Battery electric vehicles do not have an internal combustion engine and use no on-board gasoline. Instead, they use a highvoltage electric motor, which gets its power from a high-voltage battery pack. The primary benefit of BEVs is that they completely eliminate carbon dioxide (CO<sub>2</sub>) and other emissions directly from the vehicle. Therefore, it is vital to raise global ecological awareness and wider public education regarding ecology. Goal of this book is to bring closer to the readers new drive technologies that are intended to environment and nature protection. New Generation of Electric Vehicles presents modern technique achievements and technologies applied in the implementation of electric vehicles. Special attention was paid to energy efficiency of electrical vehicles. Also today's trends, mathematical models and computer design elements of future cars are presented. **Strategy An International Perspective** In this book, the fundamental differences of opinion within strategic management are not ignored or smoothed over. The authors carefully guide the students through the many, often conflicting, perspectives in the field of strategy, in order to help them become true strategic thinkers. **Electric, Hybrid, and Fuel Cell Vehicles** Springer This volume of "Encyclopedia of Sustainability Science and Technology, Second Edition," covers the electrification of vehicles, which is key to a sustainable future of transportation in both light-duty and heavy-duty vehicle sectors to address global concerns of climate change, air pollutant emissions, energy efficiency and energy security. Vehicle electrification includes several existing and emerging technologies and powertrain architectures such as conventional hybrid electric vehicles (HEVs), plug-in hybrids with various electric driving range, short- and long-range battery electric vehicles, as well as hydrogen fuel cell electric vehicles (FCEVs). Electrification will be key to connected autonomous vehicles, which are perceived to improve mobility, increase safety, reduce energy consumption and infrastructure costs, improve productivity, decrease traffic congestion and increase customer satisfaction. While electrification of vehicle technologies is relatively mature, technology improvement and economies of scale are needed to compete against incumbent technologies and to realize their benefits in the marketplace. Significant infrastructure development is needed in the case of hydrogen fuel cell vehicles and to a lesser extent for plug-in electric vehicles. Vehicle efficiency improvement is sought through a combination of several

approaches, including weight reduction, engine downsizing, increased engine compression ratio with high octane fuels, and the use of compression ignition engines with low octane fuels. Liquid hydrocarbon fuels are needed in applications where high storage energy density is required such as long-haul class-8 combination heavy-duty trucks. Shared mobility is another emerging concept that enables access to transportation services on an as-needed basis. This approach can enhance accessibility to transportation, decrease number of vehicles on the road, reduce energy use and impact on the environment, reduce cost of transportation and the need for parking, and reduce transportation time between origin and destination. In all, the reader will receive a comprehensive introduction to electric vehicles and technology trends, including energy storage, in light-, medium-, and heavy-duty sectors, as well as the infrastructure development that will be required to realize these benefits for society.

**Ferrari Fever A Lifetime Collecting, Restoring and Racing the Rarest Italian Automobiles** Ferrari Fever is a fascinating and nostalgic look back at the classic car collecting scene in the 60's and 70's, an era when some of the rarest and most interesting Italian automobiles could still be found hidden or languishing in barns, junkyards or by the side of the road...almost lost in time. Paul Schouwenburg's story begins in wartime occupied Amsterdam, a poignant backdrop to the hardships of the years to follow, when the appearance of any exotic Italian thoroughbred was a rare sight indeed. Fuelled by a fascination for all things mechanical, adventures on a Rudge bicycle and early experiences in his parents' succession of Rovers, Paul gains a burning passion for finding, restoring, and ultimately racing Italian cars. But these were not just any Italian cars -from the early 60s onwards, he begins to uncover several rare Alfas, from 1900CSS Zagato to Tipo 33/2, in addition to a host of very special Ferraris, including a 250GTO, 340 America Touring, 250 MM Vignale Berlinetta, 250GT SWB Competition/61 and 275GTB/C/LM, usually by word of mouth or tenuous rumour. Having acquired them, often many different models at a time, he would drive them home across Europe through snow storms, and restore them single-handedly in his spare time, full-time job as a world-leading head and neck cancer surgeon permitting! If that wasn't exciting enough, he would then race them, often winning, before moving on to the next irresistible project. Filled with rich anecdotes and rare insights into the colourful characters of the day, including Jacques Swaters and Rob de la Rive Box, Paul's passion and incredible drive make for exciting reading. Indeed this is a unique take, a look in the rear view mirror at a bygone era when gems could be found incredibly cheaply and enthusiasts took seat-of-the-pants decisions regarding many aspects of a hobby which was uncharted, innocent and simply not as commercial as today he couldn't even give away his 250 GTO at the time!

**Tiger in the Sea The Ditching of Flying Tiger 923 and the Desperate Struggle for Survival** Rowman & Littlefield

September 1962: On a moonless night over the raging Atlantic Ocean, a thousand miles from land, the engines of Flying Tiger flight 923 to Germany burst into flames, one by one. Pilot John Murray didn't have long before the plane crashed headlong into the 20-foot waves at 120 mph. As the four flight attendants donned life vests, collected sharp objects, and explained how to brace for the ferocious impact, 68 passengers clung to their seats: elementary schoolchildren from Hawaii, a teenage newlywed from Germany, a disabled Normandy vet from Cape Cod, an immigrant from Mexico, and 30 recent graduates of the 82nd Airborne's Jump School. They all expected to die. Murray radioed out "Mayday" as he attempted to fly down through gale-force winds into the rough water, hoping the plane didn't break apart when it hit the sea. Only a handful of ships could pick up the distress call so far from land. The closest was a Swiss freighter 13 hours away. Dozens of other ships and planes from 9 countries abruptly changed course or scrambled from Canada, Iceland, Ireland, Scotland, and Cornwall, all racing to the rescue—but they would take hours, or days, to arrive. From the cockpit, the blackness of the Atlantic grew ever closer. Could Murray do what no pilot had ever done—"land" a commercial airliner at night in a violent sea without everyone dying? And if he did, would rescuers find any survivors before they drowned or died from hypothermia in the icy water? The fate of Flying Tiger 923 riveted the world. Bulletins interrupted radio and TV programs. Headlines shouted off newspapers from London to LA. Frantic family members overwhelmed telephone switchboards. President Kennedy took a break from the brewing crises in Cuba and Mississippi to ask for hourly updates. Tiger in the Sea is a gripping tale of triumph, tragedy, unparalleled airmanship, and incredibly brave people from all walks of life. The author has pieced together the story—long hidden because of murky Cold War politics—through exhaustive research and reconstructed a true and inspiring tribute to the virtues of outside-the-box-thinking, teamwork, and hope. **The Australian Official Journal of Trademarks Power Trains**
