## Design Requirements Engineering: A Ten-Year Perspective

## Design Requirements Workshop, Cleveland, OH, USA, June 3-6, 2007, Revised and Invited Papers

*Springer Science & Business Media* Since its inception in 1968, software engineering has undergone numerous changes. In the early years, software development was organized using the waterfall model, where the focus of requirements engineering was on a frozen requirements document, which formed the basis of the subsequent design and implementation process. Since then, a lot has changed: software has to be developed faster, in larger and distributed teams, for pervasive as well as large-scale applications, with more flexibility, and with ongoing maintenance and quick release cycles. What do these ongoing developments and changes imply for the future of requirements engineering and software design? Now is the time to rethink the role of requirements and design for software intensive systems in transportation, life sciences, banking, e-government and other areas. Past assumptions need to be questioned, research and education need to be rethought. This book is based on the Design Requirements Workshop, held June 3-6, 2007, in Cleveland, OH, USA, where leading researchers met to assess the current state of affairs and define new directions. The papers included were carefully reviewed and selected to give an overview of the current state of the art as well as an outlook on probable future challenges and priorities. After a general introduction to the workshop and the related NSF-funded project, the contributions are organized in topical sections on fundamental concepts of design; evolution and the fluidity of design; quality and value-based requirements; requirements intertwining; and adapting requirements practices in different domains.

## Computational Economics

*Princeton University Press* The ability to conceptualize an economic problem verbally, to formulate it as a mathematical model, and then represent the mathematics in software so that the model can be solved on a computer is a crucial skill for economists. Computational Economics contains well-known models--and some brand-new ones--designed to help students move from verbal to mathematical to computational representations in economic modeling. The authors' focus, however, is not just on solving the models, but also on developing the ability to modify them to reflect one's interest and point of view. The result is a book that enables students to be creative in developing models that are relevant to the economic problems of their times. Unlike other computational economics textbooks, this book is organized around economic topics, among them macroeconomics, microeconomics, and finance. The authors employ various software systems--including MATLAB, Mathematica, GAMS, the nonlinear programming solver in Excel, and the database systems in Access--to enable students to use the most advantageous system. The book progresses from relatively simple models to more complex ones, and includes appendices on the ins and outs of running each program. The book is intended for use by advanced undergraduates and professional economists and even, as a first exposure to computational economics, by graduate students. Organized by economic topics Progresses from simple to more complex models Includes instructions on numerous software systems Encourages customization and creativity

## Human Resource Strategies for Organizations in Transition

*Springer Science & Business Media* This volume is the proceedings of a symposium entitled "Human Resource Strategies for Organizations in Transition" which was held at Salve Regina College, Newport, Rhode Island on May 30 - June 2, 1989. The meeting was sponsored by the Research Committee of the Human Resource Planning Society (HRPS). In developing the agenda, the Research Committee built upon the format of the previous HRPS research symposia. The intent in these meetings is on the linkage of the state-of-practice with the state-of-the-art. Particular attention was placed on research studies which were application oriented so that member organizations can see examples of ways to extend current practices with the knowledge presented by the applications. The meeting has sessions on: (1) Reshaping the Organization for the Twenty-first Century, (2) Coping with Major Organizational Change, (3) Organization Downsizing, (4) Evaluating the Human Resource Function and (5) The Impact of Corporate Culture on Future Human Resource Practices. Thirty papers were presented with discussion sessions at appropriate points in the meeting. This volume contains twenty one of these papers along with an introductory paper. A short summary is also provided at the beginning of each major subdivision into which the papers are arranged.

## WHO Expert Consultation on Rabies

### Third Report

*World Health Organization* Since the 2015 launch of the Global framework to eliminate human rabies transmitted by dogs by 2030, WHO has worked with the Food and Agriculture Organization of the United Nations, the World Organization for Animal Health, the Global Alliance for Rabies Control and other stakeholders and partners to prepare a global strategic plan. This includes a country-centric approach to support, empower and catalyze national entities to control and eliminate rabies. In this context, WHO convened its network of collaborating centers on rabies, specialized institutions, members of the WHO Expert Advisory Panel on Rabies, rabies experts and partners to review strategic and technical guidance on rabies to support implementation of country and regional programs. This report provides updated guidance based on evidence and programmatic experience on the multiple facets of rabies prevention, control and elimination. Key updates include: (i) surveillance strategies, including cross-sectoral linking of systems and suitable diagnostics; (ii) the latest recommendations on human and animal immunization; (iii) palliative care in low resource settings; (iv) risk assessment to guide management of bite victims; and (v) a proposed process for validation and verification of countries reaching zero human deaths from rabies. The meeting supported the recommendations endorsed by the WHO Strategic Advisory Group of Experts on Immunization in October 2017 to improve access to affordable rabies biologicals, especially for underserved populations, and increase programmatic feasibility in line with the objectives of universal health coverage. The collaborative mechanisms required to prevent rabies are a model for collaboration on One Health at every level and among multiple stakeholders and are a recipe for success.

## Four Practical Revolutions in Management

### Systems for Creating Unique Organizational Capability

*CRC Press* In **Four Practical Revolutions in Management: Systems for Creating Unique Organizational Capability**, authors Shoji Shiba and David Walden significantly revise their classic text on leading management systems -- A New American TQM. This book is a comprehensive approach to business management that goes beyond business operations improvement. The authors demonstrate a program for establishing a sophisticated, state-of-the-art management system that creates unique organizational capabilities. Containing new methodologies and case studies, the book is one of the most extensive in the management field and provides a step-by-step program for implementing leading management techniques. To create a successful management system, the authors argue that companies must be organized around four major areas of practice called the "four revolutions." They are customer focus, continuous improvement, total participation, and societal networking. For each of the areas, the book presents proven methods that enable dynamic implementation strategies. Customer Focus Any effective management system begins with the customer. Companies must learn to integrate a customer's concerns into their own. The book presents how to embrace the "market-in" concept and integrate the other skills in the book into a management strategy that focuses on the customer. Continuous Improvement For a company to be successful in the 21st century, it must continually improve its processes to meet the ever-changing needs of the customer. This book introduces important tools for process discovery, management, and improvement. In the process, it moves beyond "reactive improvement" methods to "proactive improvement" efforts. Total Participation The key to creating a dynamic management system is employee participation. Employees are the ones who work on the issues of quality and customer satisfaction on a daily basis. This book presents skills such as hoshin management, team-building, creating structures for mobilization, and leading change and breakthrough. Societal Networking Besides a company's internal audience, another source of business improvement ideas is societal networking. This is the set of companies, customers, and suppliers associated with any organization, that can learn from the experiences of these groups. To develop these valuable resources into a comprehensive management strategy, the book covers "mutual learning" methods, as well as keys for integrating various management methodologies. This book includes: Hoshin management PDCA (plan, do, check, act) cycle 7-step method of reactive improvement Proactive improvement to develop new products Engaging people in a changing environment Focused strategies for phase-in Leading process improvement The practice of breakthrough Over thirty thorough case studies

## In Battle for Peace

### The Story of My 83rd Birthday

*Oxford University Press* **W. E. B. Du Bois** was a public intellectual, sociologist, and activist on behalf of the African American community. He profoundly shaped black political culture in the United States through his founding role in the NAACP, as well as internationally through the Pan-African movement. Du Bois's sociological and historical research on African-American communities and culture broke ground in many areas, including the history of the post-Civil War Reconstruction period. Du Bois was also a prolific author of novels, autobiographical accounts, innumerable editorials and journalistic pieces, and several works of history. One of the most neglected and obscure books by W. E. B. Du Bois, **In Battle for Peace** frankly documents Du Bois's experiences following his attempts to mobilize Americans against the emerging conflict between the United States and the Soviet Union. A

victim of McCarthyism, Du Bois endured a humiliating trial-he was later acquitted-and faced political persecution for over a decade. Part autobiography and part political statement, *In Battle for Peace* remains today a powerful analysis of race in America. With a series introduction by editor Henry Louis Gates, Jr., and an introduction by Manning Marable, this edition is essential for anyone interested in African American history.

## Islam on Mercy and Compassion

*Minhaj-UI-Quran Publications* **The common perception of Islam in the media is one of austerity and rigidity, and in extreme cases, severe cruelty. The situation is not helped by the strict and narrow-minded interpretation of the religion by a number its adherents. However, those who are willing to scratch below the surface and look further will see that nothing is further from the truth; that Islam does not teach anything except universal love, mercy, compassion, peace & benevolence. Dr Muhammad Tahir-ul-Qadri is an eminent and internationally renowned Islamic scholar, orator and author. In this book, he presents numerous quotations from the Qur'an and authentic hadith to help the reader discover the prime position of the qualities of mercy and compassion in the Islamic faith. Dr Tahir-ul-Qadri has meticulously referenced all quotations to ensure accuracy and clarity in order to dispel any doubts about the matter. Through his distinctive solid scholarship and methodology, Dr Tahir-ul-Qadri demonstrates how Islam promotes spiritual endeavour, moderation, ease and tolerance, and is not merely concerned with ritualism and outward forms of piety. For Muslims, this book is essential reading to help reclaim Islam back from those who portray it as merely a socio-political enterprise devoid of compassion for humanity and the rest of creation. Non-Muslims, on the other hand, will be able to appreciate these lesser known aspects of Islam, which in fact form its core philosophy.**
