This study investigates women's nutritional and hygienic knowledge in order to characterize health needs in the Anosy region of Madagascar. Here, women govern nutritional and hygienic practises, including meal preparation and child care, and thus are in a position to provide invaluable input in qualifying local needs. Eight focus groups of 13-60 women each were conducted in the seven most impoverished communes of the Anosy, and a qualitative analysis was done. Participants were recruited with the aid of a local NGO, Azafady. An important finding of the study was that women demonstrated a basic understanding of nutrition and hygiene and outlined the need to reduce nutritional and hygienic practise barriers. These findings should be used to prioritize projects and research seeking to improve nutrition and hygiene in the Anosy region. **Darby and Walsh Dental Hygiene E-Book Theory and Practice Elsevier Health Sciences** Back and better than ever, **Darby and Walsh's Dental Hygiene: Theory and Practice, 5th Edition** offers everything you need to succeed in your coursework, at certification, and in clinical practice. Elsevier Health Sciences Health Services for American Indians IAPSM's Textbook of Community Medicine Jaypee Brothers Medical Publishers Transforming Food Systems for a Rising India Springer This open access book examines the interactions between India's economic development, agricultural production, and nutrition through the lens of a "Food Systems Approach (FSA)." The Indian growth story is a paradoxical one. Despite economic progress over the past two decades, regional inequality, food insecurity and malnutrition problems persist. Simultaneously, recent trends in obesity along with micro-nutrient deficiency portend to a future public health crisis. This book explores various challenges and opportunities to achieve a nutrition-secure future through diversified production systems, improved health and hygiene environment and greater individual capability to access a balanced diet contributing to an increase in overall productivity. The authors bring together the latest data and scientific evidence from the country to map out the current state of food systems and nutrition outcomes. They place India within the context of other developing country experiences and highlight India's status as an outlier in terms of the persistence of high levels of stunting while following global trends in obesity. This book discusses the policy and institutional interventions needed for promoting a nutrition-sensitive food system and the multi-sectoral strategies needed for simultaneously addressing the triple burden of malnutrition in India.
