LEGAL PRINCIPLES FOR COMBATting CYBERLAUNDERING

Springer This volume deals with the very novel issue of cyber laundering. The book investigates the problem of cyber laundering legally and sets out why it is of a grave legal concern locally and internationally. The book looks at the current state of laws and how they do not fully come to grips with the problem. As a growing practice in these modern times, and manifesting through technological innovations, cyber laundering is the birth child of money laundering and cybercrime. It concerns how the internet is used for 'washing' illicit proceeds of crime. In addition to exploring the meaning and ambits of the problem with concrete real-life examples, more importantly, a substantial part of the work innovates ways in which the dilemma can be curbed legally. This volume delves into a very grey area of law, daring a yet unthreaded territory and scouring undiscovered paths where money laundering, cybercrime, information technology and international law converge. In addition to unearthing such complexity, the hallmark of this book is in the innovative solutions and dynamic remedies it postulates.

AUDITING, TRUST AND GOVERNANCE

DEVELOPING REGULATION IN EUROPE

Routledge The reputation of corporate reporting has been in crisis. Trust in the process of financial accounting and auditing has been undermined by a series of high profile scandals involving major corporations, including Enron, Parmalat, Ahold, and Worldcom. In response, regulators and practitioners world-wide have put forward a series of initiatives to repair the damage and restore faith in corporate governance. In this important book, the European Auditing Research Network analyzes how that response has developed in Europe, with particular emphasis on the field of auditing. PRINCIPLES AND PRACTICES FOR A FEDERAL STATISTICAL AGENCY

FIFTH EDITION

National Academies Press Publicly available statistics from government agencies that are credible, relevant, accurate, and timely are essential for policy makers, individuals, households, businesses, academic institutions, and other organizations to make informed decisions. Even more, the effective operation of a democratic system of government depends on the unhindered flow of statistical information to its citizens. In the United States, federal statistical agencies in cabinet departments and independent agencies are the governmental units whose principal function is to compile, analyze, and disseminate information for such statistical purposes as describing population characteristics and trends, planning and monitoring programs, and conducting research and evaluation. The work of these agencies is coordinated by the U.S. Office of Management and Budget. Statistical agencies may acquire information not only from surveys or censuses of people and organizations, but also from such sources as government administrative records, private-sector datasets, and Internet sources that are judged of suitable quality and relevance for statistical use. They may conduct analyses, but they do not advocate policies or take partisan positions. Statistical purposes for which they provide information relate to descriptions of groups and exclude any interest in or identification of an individual person, institution, or economic unit. Four principles are fundamental for a federal statistical agency: relevance to policy issues, credibility among data users, trust among data providers, and independence from political and other undue external influence. Principles and Practices for a Federal Statistical Agency: Fifth Edition explains these four principles in detail.

LOCAL GOVERNMENT E-DISCLOSURE & COMPARISONS

EQUIPPING DELIBERATIVE DEMOCRACY FOR THE 21ST CENTURY

University Press of America In Local Government e-Disclosure & Comparisons, author Tim Turner proposes an information system to counterbalance the social complexity represented by over 87,000 local governments and their myriad subordinate units. Turner focuses on three critical choices: whether web-posted data will sufficiently disclose information to interested stakeholders, whether standards will be uniform across state lines, and whether disclosure systems will be integrated nationally. Under his plan, an e-disclosure regimen will populate a federated system of state-based electronic repositories, creating a nationwide data warehouse.
