Ask any of the builders who come into your store and they'll usually have a horror story to share about a concrete job gone awry and how much it cost them. *Basic Concrete Engineering for Builders* may be one of the only books available today that explains how to avoid common concrete problems with foundations, slabs, columns, and more. It gives step-by-step explanations on how to plan, mix, reinforce and pour concrete. It also shows how to design concrete for buildings -- the calculations, the tables, and the rules of thumb, with examples and insight into the working knowledge that every builder needs. Most builders don't end up specifying requirements for structural concrete work. That's the job of an engineer. But most builders working with concrete need a good general understanding of the concepts behind structural concrete engineering. They need to know about: surveying, foundation layout, formwork, form materials, forming problems, aggregates, admixtures, reinforcing, mixing and placing requirements, pumping, creating joints, curing, and testing the concrete's strength. They need to know basic design for walls, columns, slabs, slabs-on-grade, one- and two-way slabs, elevated slabs, equipment pads, pre-cast walls, retaining walls, basement walls, crib walls, reinforcing beams and girders, driveways, sidewalks, curbs, catch basins, manholes and other miscellaneous structures, as well as how to calculate the reinforcement needed for these structural components. You'll find all this information in this book and on the software included in the back. Includes Free Engineering Software: A CD-ROM is included with easy-to-use engineering software for designing simple concrete elements for beams, slabs and columns. *Blueprint for Building Community Leadership Insights for Good Government AuthorHouse* *Blueprint for Building Community* is a rare look at the career of a city manager. This career portrait is set in two Illinois communities - Park Forest and Woodridge - communities which hold high aspirations for their residents. City managers, partnering with elected leaders and citizens in these communities, have worked to fulfill those aspirations. This book highlights the values and relationships that must be cultivated by the city manager to successfully build community. Although the focus is on the role of the city manager, other key participants such as elected officials, citizens, and employees can gain from the insights. Community building requires connecting the key groups in the community to the mission and "sacred things" dear to residents. Harnessing the energy of all the players produces tremendous results. For the many people who worked to build Park Forest and Woodridge, and so many communities across this country, this book is a tribute to their efforts. --COVER. *Building State Capability Evidence, Analysis, Action Oxford University Press* Introduction : the "long voyage of discovery" -- The big stuck in state capability -- Looking like a state : the seduction of isomorphic mimicry -- Premature load bearing : doing too much too soon -- Capability for policy implementation -- What type of organization capability is needed? -- The challenge of building (real) state capability for implementation -- Doing problem-driven work -- The searchframe : doing experimental iterations -- Managing your authorizing environment -- Building state capability at scale through groups. *The Professional Practice of Architectural Working Drawings John Wiley & Sons* The practical, comprehensive handbook for creating effective architectural drawings In one beautifully illustrated volume, *The Professional Practice of Architectural Working Drawings, Fourth Edition* presents the complete range of skills, concepts, principles, and applications that are needed to create a full set of architectural working drawings. The 2010 Patient Protection and Affordable Care Act required the Department of Health and Human Services (HHS) to enlist the Institute of Medicine (IOM) in examining pain as a public health problem. In this report, the IOM offers a blueprint for action in transforming prevention, care, education, and research, with the goal of providing relief for people with pain in America. To reach the vast multitude of people with various types of pain, the nation must adopt a population-level prevention and management strategy. The IOM recommends that HHS develop a comprehensive plan with specific goals, actions, and timeframes. Better data are needed to help shape efforts, especially on the groups of people currently underdiagnosed and undertreated, and the IOM encourages federal and state agencies and private organizations to accelerate the collection of data on pain incidence, prevalence, and treatments. Because pain varies from patient to patient, healthcare providers should increasingly aim at tailoring pain care to each person's experience, and self-management of pain should be promoted. In addition, because there are major gaps in knowledge about pain across health care and society alike, the IOM recommends that federal agencies and other stakeholders redesign education programs to bridge these gaps. Pain is a major driver for visits to physicians, a major reason for taking medications, a major cause of disability, and a key factor in quality of life and productivity. Given the burden of pain in human lives, dollars, and social consequences, relieving pain should be a national priority. *Understanding Construction Drawings for Housing and Small Buildings Basic Blueprint Reading One Story Living Home Plans-Over 500 Beautiful Homes HDA - House Plans and More* Presents more than five hundred floor plans for one-story home styles, from ranch homes to traditional cottages, and includes tips on creating interior and exterior accents for the new home. *Blueprint: 365-Day Extreme Training to (Re)Build a Bulletproof Body HarperCollins* From world-renowned adventurer and bestselling author of *The Art of Resilience* and *The World's Fittest Book*, comes the ultimate blueprint to (re)building a bulletproof body. As such, it will take a class struggle to solve. In this ground breaking class analysis, Matthew T. Huber argues that the carbon-intensive capitalist class must be confronted for producing climate change. Yet, the narrow and unpopular roots of climate politics in the professional class is not capable of building a movement up to this challenge. For an alternative strategy, he proposes climate politics that appeals to the vast majority of society: the working class. Huber evaluates the Green New Deal as a first attempt to channel working class material and ecological interests and advocates building union power in the very energy system we need to dramatically transform. In the end, as in classical socialist movements of the early 20th Century, winning the climate struggle will need to be internationalist based on a form of planetary working class solidarity. *Blueprints for Writing: Building Essays Cengage Learning* **BLUEPRINTS FOR WRITING: BUILDING ESSAYS** demystifies the writing process by guiding you through each step of the essay plan, or blueprint. It deals with data from several domains of linguistics and contributes to an integration of findings from various subdisciplines of linguistics into a common model of the architecture of language. It presents applications and extensions of the model of Construction Morphology to a wide range of languages. Construction Morphology is one of the theoretical paradigms in present-day morphology. It makes use of concepts of Construction Grammar for the analysis of word formation and inflection. Complex words are seen as constructions, that is, pairs of form and meaning. Morphological patterns are accounted for by construction schemas. These are the recipes for coining new words and word forms, and they motivate the properties of existing complex words. Both schemas and individual words are stored, and hence there is no strict separation of lexicon and grammar. In addition to abstract schemas there are subschemas for subclasses of complex words with specific properties. This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition, word processing, and language change.
