Demand in Viet Nam for Rhinoceros Horn used in Traditional Medicine United Nations This study aims to understand better the demand for traditional medicine and more contemporary health-related reasons, collectively referred to as ATM in this report, in Viet Nam. The country is strategically important for illegally traded wildlife products, such as pangolin scales and rhino horn. Using an in-person survey of over 1,000 respondents on wildlife consumed as medicine, the study had four main objectives: identify consumer profile of ATM users (age, income, gender, etc.), identify recent trends in ATM consumption among users, focusing on two high conservation-value species (pangolin and rhino), identify the main attributes of demand (quality, price, harvesting method, etc.), evaluate the policy options to reduce demand for high-conservation species. To provide insights and broader overview of market trends, the authors also interviewed experts in ATM in Viet Nam. **Dissemination and Implementation Research in Health Translating Science to Practice** Oxford University Press The definitive work in D&I research -- now completely updated and expanded The application of scientific research to the creation of evidence-based policies is a science unto itself -- and one that is never easy. Dissemination and implementation research (D&I) is the study of how scientific advances can be implemented into everyday life, and understanding how it works has never been more important for students and professionals across the scientific, academic, and governmental communities. *Dissemination and Implementation Research in Health* is a practical guide to making research more consequential, a collection assembled and written by today's leading D&I researchers. Readers of this book are taught to: Evaluate the evidence base in an effective intervention Choose a strategy that produces the greatest impact Design an appropriate and effectual study Track essential outcomes Account for the barriers to uptake in communities, social service agencies, and health care facilities The challenges to moving research into practice are universal, and they're complicated by the current landscape's reliance on partnerships and multi-center research. In this light, *Dissemination and Implementation Research in Health* is nothing less than a roadmap to effecting change in the sciences. It will have broad utility to researchers and practitioners in epidemiology, biostatistics, behavioral science, economics, medicine, social work, psychology, and anthropology -- both today and in our slightly better future. **Social Media and Society An Introduction to the Mass Media Landscape** Rowman & Littlefield "This text engages students in the social media phenomenon, exploring how fundamental changes in mass media influence every level of societal communication. With the explosion of social media and big data, students must become conscious of media's positive and negative influences on their lives"-- **Medical Imaging Image perception, observer performance, and technology assessment Radiology in Global Health Strategies, Implementation, and Applications** Springer The World Health Organization stated that approximately two-thirds of the world's population lacks adequate access to medical imaging. The scarcity of imaging services in developing regions contributes to a widening disparity of health care and limits global public health programs that require imaging. Radiology is an important component of many global health programs, including those that address tuberculosis, AIDS-related disease, trauma, occupational and environmental exposures, breast cancer screening, and maternal-infant health care. There is a growing need for medical imaging in global health efforts and humanitarian outreach, particularly as an increasing number of academic, government, and non-governmental organizations expand delivery of health care to disadvantaged people worldwide. To systematically deploy clinical imaging services to low-resource settings requires contributions from a variety of disciplines such as clinical radiology, epidemiology, public health, finance, radiation physics, information technology, engineering, and others. This book will review critical concepts for those interested in managing, establishing, or participating in a medical imaging program for resource-limited environments and diverse cross-cultural contexts undergoing imaging technology adaptation. **Assessing Impairment From Theory to Practice** Springer Science & Business Media Impairment and disability are widely used terms, yet considerable disagreement exists as to their relationship—especially when impairment means different things to different professionals in the fields of mental health, medicine, and education. Although diagnostic criteria for various disorders are clearly detailed in the DSM-IV and elsewhere, criteria for impairment remain elusive. And patients with severe limitations but minimal symptoms, or the reverse, further complicate the discussion. The first in-depth treatment of the theory, definition, and evaluation of this core concept, *Assessing Impairment: From Theory to Practice* cuts through the confusion and cross-talk. Leading scholars and clinicians offer a robust evidence base for a much-needed reconceptualization of impairment within the context of diagnosis and disability, arguing for a wide-ranging quality-of-life perspective. This contextual approach to assessment goes beyond mere symptom counting, resulting in more accurate diagnosis, targeted interventions, and improved patient functioning. Within this concise but comprehensive volume, coverage focuses on key areas including: Current conceptualizations from the DSM-IV and other medical models. Methodologies for measuring symptom severity and impairment. Social/behavioral issues, such as resilience, adaptive behaviors, and family environment. Developmental issues across the life span. Legal and ethical questions and civil rights issues. Impairment and disability as they relate to trauma. The interdisciplinary model proposed in *Assessing Impairment* gives clinicians vital tools for working with the unique limitations and strengths of every patient. Child, school, and educational psychologists will find it particularly useful, given the critical importance of early detection and the complexity of young people's lives. **Medical Terminology for Health Professions (Book Only)** Delmar Pub **Basic Anesthesiology Examination Review** Oxford University Press *Basic Anesthesiology Examination Review* is a high-yield, streamlined study aid specifically designed for Anesthesiology residents preparing for the American Board of Anesthesiology (ABA) Basic Anesthesiology Exam. This decade is being characterized by the appearance and use of emergent technologies under development. This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices. The consequence will be a significant

improvement in health care and well-fare, i.e. the shift from a reactive medicine to a preventive medicine. This shift implies that the citizen will play an important role in the healthcare delivery process, what requires a comprehensive and personalized assistance. In this context, society will meet emerging media, incorporated to all objects, capable of providing a seamless, adaptive, anticipatory, unobtrusive and pervasive assistance. The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society, while new paradigms are created for this inclusive society to be socially and economically sustainable, and respectful with the environment. In this way, these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications. **Index Medicus pHealth 2021 IOS Press Journal of the National Cancer Institute JNCI.
