## Leadership Commitments to Improve Value in Health Care

## Finding Common Ground: Workshop Summary

*National Academies Press* This volume reports on discussions among multiple stakeholders about ways they might help transform health care in the United States. The U.S. healthcare system consists of a complex network of decentralized and loosely associated organizations, services, relationships, and participants. Each of the healthcare system's component sectors--patients, healthcare professionals, healthcare delivery organizations, healthcare product developers, clinical investigators and evaluators, regulators, insurers, employers and employees, and individuals involved in information technology--conducts activities that support a common goal: to improve patient health and wellbeing. Implicit in this goal is the commitment of each stakeholder group to contribute to the evidence base for health care, that is, to assist with the development and application of information about the efficacy, safety, effectiveness, value, and appropriateness of the health care delivered.

## Science and Decisions

## Advancing Risk Assessment

*National Academies Press* Risk assessment has become a dominant public policy tool for making choices, based on limited resources, to protect public health and the environment. It has been instrumental to the mission of the U.S. Environmental Protection Agency (EPA) as well as other federal agencies in evaluating public health concerns, informing regulatory and technological decisions, prioritizing research needs and funding, and in developing approaches for cost-benefit analysis. However, risk assessment is at a crossroads. Despite advances in the field, risk assessment faces a number of significant challenges including lengthy delays in making complex decisions; lack of data leading to significant uncertainty in risk assessments; and many chemicals in the marketplace that have not been evaluated and emerging agents requiring assessment. Science and Decisions makes practical scientific and technical recommendations to address these challenges. This book is a complement to the widely used 1983 National Academies book, Risk Assessment in the Federal Government (also known as the Red Book). The earlier book established a framework for the concepts and conduct of risk

assessment that has been adopted by numerous expert committees, regulatory agencies, and public health institutions. The new book embeds these concepts within a broader framework for risk-based decision-making. Together, these are essential references for those working in the regulatory and public health fields.

## Introduction to Public Health for Chiropractors

Jones & Bartlett Learning Public health is of concern to practicing chiropractors, as well as chiropractic students. The vast majority of chiropractors utilize public health concepts every day as an integral part of patient care. For instance, they give advice on risk factors that should be avoided and protective factors to be added by their patients to enhance healing and prevent illness. Public health is also part of the curriculum at all chiropractic colleges and is tested by the National Board. No public health textbooks are available that are specifically designed for the chiropractor. Consequently, college instructors are forced to make-do with class notes and generic texts that do not address the specific issues relevant to chiropractic. This book will not only be of interest to chiropractic students, but also practicing chiropractors because it will provide information they can utilize to provide better care by positively intervening with their patients and their communities regarding public health matters.

Safety Signs and Signals : The Health and Safety (Safety Signs and Signals) Regulations 1996: Guidance on Regulations

## Public Engagement and Social Science

*Policy Press* Drawing on social science conversations at a lively café in Bristol, this highly original book explores the value of public engagement in a wider social science context. The chapters range from themes such as the dialogic character of the social sciences, pragmatism in responses, and the underpinnings of managerial approaches to the restructuring of higher education. The first part reflects upon the different social and political inflections of public engagement. It is followed by chapters based upon talks at the café that were concerned with public engagement and the contribution of social science to a reflexive understanding of the dilemmas and practices of daily life. Together, the contributors offer a refreshing look at the role of social science in the societies it examines.

# The Health Effects of Cannabis and Cannabinoids

## The Current State of Evidence and Recommendations for Research

*National Academies Press* Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at the state level and 4 states have legalized both the medical and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. The Health Effects of Cannabis and Cannabinoids provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agenda—outlining gaps in current knowledge and opportunities for providing additional insight into these issues—that summarizes and prioritizes pressing research needs.

## World Health Report 2012

### No Health Without Research

*iMedPub* The World Health Report 2012, the biannual flagship report of the World Health Organization, focuses for the first time in its history on the theme of research for better health. Decisions on healthcare are still made without a solid grounding in research evidence, and an impetus is required for this state of affairs to change. Aimed at ministers of health, the report provides new ideas, innovative thinking, and pragmatic advice on how to strengthen health research systems. WHO and PLoS have launched an initiative to encourage researchers to complement and substantiate the key messages in World Health Report 2012 by creating a special WHO/PLoS Collection. PLoS invited the submission of papers, especially from low- and middle-income countries, on topics related to strengthening of key functions and components of national health research systems. The World Health Report 2012 focuses on eight specific areas, discussed in the editorial, within the theme of 'No Health Without Research.' We highlight below some examples of articles previously published in PLoS journals in these specific areas of interest. Now iMedPub brings this collection to you within a book.

## The Science of Citizen Science

*Springer Nature* This open access book discusses how the involvement of citizens into scientific endeavors is expected to contribute to solve the big challenges of our time, such as climate change and the loss of biodiversity, growing inequalities within and between societies, and the sustainability turn. The field of citizen science has been growing in recent decades. Many different stakeholders from scientists to citizens and from policy makers to environmental organisations have been involved in its practice. In addition, many scientists also study citizen science as a research approach and as a way for science and society to interact and collaborate. This book provides a representation of the practices as well as scientific and societal outcomes in different disciplines. It reflects the contribution of citizen science to societal development, education, or innovation and provides an overview of the field of actors as well as on tools and guidelines. It serves as an introduction for anyone who wants to get involved in and learn more about the science of citizen science.

## Collaboration across Health Research and Medical Care

## Healthy Collaboration

*Ashgate Publishing, Ltd.* Health research and health care practice are radically transforming as governments invest more in large scale, national and international health projects with increasing levels of interdisciplinarity as populations age and as nations grow wealthier. This volume examines the structures and dynamics of scientific collaboration in health research and health care. Bringing together detailed research from the US, Canada, Europe and Japan, *Collaboration Across Health Research and Medical Care* sheds light on the features, environments and relationships that characterise collaboration in health care and research, exploring changing patterns of collaboration and examining the causes and consequences of team work in the health domain. With attention to the increasingly porous boundaries between health care and research, the book not only investigates research settings, but also considers the manner in which knowledge produced in laboratories and clinics is translated into day-to-day medical and care practice and health initiatives. It offers a rich examination of the political, technical and organisational facets of collaboration and the implications of changes in collaboration for every day treatment and practice. *Collaboration Across Health Research and Medical Care* will be of interest to scholars of sociology and science and technology studies, as well as those working in the field of health policy and research.

## Practice, Equity, Human Rights

*Oxford University Press* "In 2019, a child born in Japan will live to the age of 84, whereas a child born in Sierra Leone will only live until the age of 54.1 Similar disparities exist between rich and poor communities within countries.2 These differences in life expectancy are not caused by genetics, biology, or culture. Health inequities are caused by poverty, racism, a lack of medical care, and other social forces that influence health. A critical analysis of the historical roots of this gross and systemic inequality and of the political economy that continues inequality is a fundamental part of the study of global health"--

### Water Reuse

## Potential for Expanding the Nation's Water Supply Through Reuse of Municipal Wastewater

*National Academies Press* Expanding water reuse--the use of treated wastewater for beneficial purposes including irrigation, industrial uses, and drinking water augmentation--could significantly increase the nation's total available water resources. *Water Reuse* presents a portfolio of treatment options available to mitigate water quality issues in reclaimed water along with new analysis suggesting that the risk of exposure to certain microbial and chemical contaminants from drinking reclaimed water does not appear to be any higher than the risk experienced in at least some current drinking water treatment systems, and may be orders of magnitude lower. This report recommends adjustments to the federal regulatory framework that could enhance public health protection for both planned and

unplanned (or de facto) reuse and increase public confidence in water reuse.
