By bringing together groundbreaking research studies detailing the development and validation of leadership activities and resources that promote effective public health practice in a variety of settings, we seek to provide a basis for leading public health organizations. We encouraged contributions that assess the effectiveness of public health leaders, as well as critical discussions of methods for improving the leadership of public health organizations at all levels. Both ongoing and completed original research was welcome, as well as methods, hypothesis and theory, and opinion papers. The effective practice of public health leadership is a key concept for public health practitioners to clearly understand as the 21st century unfolds. Following the significant lapses of leadership in the for-profit world, leaders in governmental and not-for-profit agencies are required to learn by their failed examples. A major task facing all current and prospective public health practitioners is developing the required leadership skills in order to be effective twenty first century leaders. As a consequence of the rapidly evolving health of the public, as well as the development of the discipline and practice of public health, understanding the principles and attributes of leadership are now required of all public health practitioners. Leadership can be described in a variety of ways. Leadership in public health requires skillful individuals meeting the health challenges of communities and the population as a whole. Leadership may be defined as a process that occurs whenever an individual intentionally attempts to influence another individual or

group, regardless of the reason, in an effort to achieve a common goal which may or may not contribute to the success of the organization. Thus leadership is a process involving two or more people. The nature of leadership is an important aspect of the concept as a whole. Submissions relating public health leadership to the management of public health organizations were welcomed. This Research Topic provided the opportunity for authors to consider the concept of leadership from a variety of approaches. Original research papers considering a variety of leadership theories provide methodological approaches to the topic. Hypothesis and theory papers provide the basis for application of leadership to public health practice. Opinion papers provide the opportunity to develop thinking concerning practice of public health leadership.

**Mitigating Mass Violence and Managing Threats in Contemporary Society** [IGI Global](#) In a decade that has seen the rise of far-right extremism, Western countries still face myriad threats of mass violence, including terrorism. Of particular concern is the phenomenon of "lone-wolf terrorism," whereby acts of political violence are committed by individuals who are operating independently of any organized terrorist group, something which makes them inherently more difficult to identify in advance of an attack. Now there is a need for research that profiles these perpetrators, explores the incidents that occur, and analyzes the shifting changes in mass violence, technology, and terrorist behavior in modern times. *Mitigating Mass Violence and Managing Threats in Contemporary Society* explores the shifting definitions and implications of mass violence and covers important areas focused on the individuals who partake in these acts as well as weapon choice and the influence of weapon accessibility, how the attention-seeking behavior and promotion of violent actions is evolving, and how technology is used such as disseminating a manifesto prior to the incidents or using live streaming to broadcast incidents of mass violence as they transpire. The book also examines ways to prevent these incidents before they occur, which is a proven challenge with no single accurate profile for offenders, and whether perpetrators of mass violence share similar goals and motivations for their sprees, as well as commonalities in warning behaviors. This comprehensive research work is essential for law enforcement, military officials, defense specialists, national security experts, criminologists, psychologists, government officials, policymakers, lawmakers, professionals, practitioners, academicians, students, and researchers working in the fields of conflict analysis and resolution, crisis management, law enforcement, mental health, education, psychology, sociology, criminology, criminal justice, terrorism, and other social sciences.

**Identity Work in the Contemporary University Exploring an Uneasy Profession** [Springer](#) "Academic identities research is a growing area of scholarly enquiry especially as academics themselves question the evolving nature of their roles in rapidly-changing university environments. Performative frameworks in many countries around the world reflect these changes and this volume brings a number of disciplinary perspectives to bear on how we understand the lived experiences of

academic life in a global context. Contributors explore the power of conceptual tools drawn from Philosophy, Psychology, Sociology and Politics to challenge increasingly instrumental neoliberal political approaches to higher education, supported by empirical evidence. Worthwhile teaching, learning and research require significant personal investment, and the book pays particular attention to the deeply affective dimensions of current academic practices. In Part One, tools to conceptualise academic identity-work drawn from foundational academic disciplines are applied to contemporary higher education practices. Part Two foregrounds how working in universities today proceeds, with a particular focus on how academics respond to the multiplicity of institutional demands. The most pressing perceived demand, supported by contributions in Part Three, is publication: the need to be 'visible' to 'count' is now a global imperative, with the affective dimensions not yet well-understood at policy level. In Part Four, those who support colleagues negotiating a reconfigured academic terrain explore productive approaches towards this task to ensure that academic practice remains rooted in the values previously outlined. This book will be of interest to those working in universities globally who seek a deeper appreciation of the contextual drivers that shape academic work." **Contemporary Health Promotion in Nursing Practice** [Jones & Bartlett Publishers](#) In

**Strengthening Forensic Science in the United States A Path Forward**

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
