CULTURES AND ORGANIZATIONS: SOFTWARE FOR THE MIND

Original in thought and profoundly important, Cultures and Organizations offers vital knowledge and insight on issues that will shape the future of cultures and nations in a globalized world.*

SOFTWARE AND MIND

THE MECHANISTIC MYTH AND ITS CONSEQUENCES

Andsor Books *Addressing general readers as well as software practitioners, "Software and Mind" discusses the fallacies of the mechanistic ideology and the degradation of minds caused by these fallacies. Mechanism holds that every aspect of the world can be represented as a simple hierarchical structure of entities. But, while useful in fields like mathematics and manufacturing, this idea is*

generally worthless, because most aspects of the world are too complex to be reduced to simple hierarchical structures. Our software-related affairs, in particular, cannot be represented in this fashion. And yet, all programming theories and development systems, and all software applications, attempt to reduce real-world problems to neat hierarchical structures of data, operations, and features. Using Karl Popper's famous principles of demarcation between science and pseudoscience, the book shows that the mechanistic ideology has turned most of our software-related activities into pseudoscientific pursuits. Using mechanism as warrant, the software elites are promoting invalid, even fraudulent, software notions. They force us to depend on generic, inferior systems, instead of allowing us to develop software skills and to create our own systems. Software mechanism emulates the methods of manufacturing, and thereby restricts us to high levels of abstraction and simple, isolated structures. The benefits of software, however, can be attained only if we start with low-level elements and learn to create complex, interacting structures. Software, the book argues, is a non-mechanistic phenomenon. So it is akin to language, not to physical objects. Like language, it permits us to mirror the world in our minds and to communicate with it. Moreover, we increasingly depend on software in everything we do, in the same way that we depend on language. Thus, being restricted to mechanistic software is like thinking and communicating while being restricted to some ready-made sentences supplied by an elite. Ultimately, by impoverishing software, our elites are achieving what the totalitarian elite described by George Orwell in "Nineteen Eighty-Four" achieves by impoverishing language: they are degrading our minds.

With major new contributions from Michael Minkov's analysis of data from the World Values Survey, as well as an account of the evolution of cultures by Gert Jan Hofstede, this revised and expanded edition: Reveals the "moral circles" from which national societies are built and the unexamined rules by which people think, feel, and act Explores how national cultures differ in the areas of inequality, assertiveness versus modesty, and tolerance for ambiguity Explains how organizational cultures differ from national cultures—and how they can be managed Analyzes stereotyping, differences in language, cultural roots of the 2008 economic crisis, and other intercultural dynamics*

EVALUATION CULTURES

SENSE-MAKING IN COMPLEX TIMES

Routledge *Evaluation Cultures draws upon a sample of reflections, drawn from organizational practices, nationally centered political*

cultures, and ethnic cultures, as a framework for understanding how culture influences the work of evaluation. Two main conclusions seem to emerge: first, that there exists no single, uniform, and homogenous national evaluation culture; second, that the idea of a unified transnational culture of evaluation is an illusion.The evaluation community includes a diverse group of professionals; a diversity that is not just represented in national or ethnic culture but also in academic backgrounds, public and private sector allegiances, and personal character. The contributors to this book represent, in part, this diversity by reflecting a range of views.Evaluation Cultures draws upon the experience of senior evaluation practitioners, who share their reflections on their practice and experience, in order to put forth challenges to purely academic analysis. Evaluation Cultures presents a consistent, if not exhaustive, attempt to give analytical and empirical sense to all of the cultures of the evaluation community.

ADVANCES IN LEARNING SOFTWARE ORGANIZATIONS

6TH INTERNATIONAL WORKSHOP, LSO 2004, BANFF, CANADA, JUNE 20-21, 2004, PROCEEDINGS

Springer *Software-intensive organizations cannot help but learn. A software organization that does not learn will not exist for long, because the software market is continuously on the move, because of new customerdemandsand needs, and becauseof new competitor products and services. Software organizationsmust adapt quickly to this ever-changing environment, and the capability to adapt is one of the most important aspects of lea- ing. Smart organizations will attempt to predict future software demands, and develop a corresponding knowledge road map that identi?es the capabilities needed over time in order to meet these demands. Organizational learning typically occurs when experienced organization members share their knowledge with colleagues, such that the organization as a whole can pro?t from the intellectual capital of its members. While knowledge is typically shared in an adhoc fashion by means of direct, face-to-face communication, a learning software organizationwill want to ensurethat this knowledgesharingoccursina systematicway, enabling it whenever and wherever it is needed. Since 1999,the annualInternationalWorkshopon LearningSoftwareOrganizations (LSO) hasprovideda communicationforumthat bringstogether academiaand industry to discuss the advancements in and to address the questions of continuous learning in software-intensive organizations. Building upon existing work on knowledge mana- ment and organizational learning, the workshop series promotes interdisciplinary - proaches from computer science and information systems, business, management and organization science as well as cognitive science.*
