### THE ECONOMICS OF SOCIAL DETERMINANTS OF HEALTH AND HEALTH INEQUALITIES

---

---

### A RESOURCE BOOK

---

*World Health Organization* "This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

### ENERGY, CLIMATE CHANGE AND THE THREE DOMAINS OF SUSTAINABLE DEVELOPMENT

---

How well do our assumptions about the global challenges of energy, environment and economic development fit the facts? Energy prices have varied hugely between countries and over time, yet the share of national income spent on energy has remained surprisingly constant. The foundational theories of economic growth account for only about half the growth observed in practice. Despite escalating warnings for more than two decades about the planetary risks of rising greenhouse gas emissions, most governments have seemed powerless to change course. Planetary Economics shows the surprising links between these seemingly unconnected facts. It argues that tackling the energy and environmental problems of the 21st Century requires three different domains of decision-making to be recognised and connected. Each domain involves different theoretical foundations, draws on different areas of evidence, and implies different policies. The book shows that the transformation of energy systems involves all three domains - and each is equally important. From them flow three pillars of policy - three quite distinct kinds of actions that need to be taken, which rest on fundamentally different principles. Any pillar on its own will fail. Only by understanding all three, and fitting them together, do we have any hope of changing course. And if we do, the oft-assumed conflict between economy and the environment dissolves - with potential for benefits to both. Planetary Economics charts how.

### TEACHING AND DIGITAL TECHNOLOGIES

---

---

### BIG ISSUES AND CRITICAL QUESTIONS

---

*Cambridge University Press* Teaching and Digital Technologies: Big Issues and Critical Questions helps both pre-service and in-service teachers to critically question and evaluate the reasons for using digital technology in the classroom. Unlike other resources that show how to use specific technologies - and quickly become outdated, this text empowers the reader to understand why they should (or should not) use digital technologies, when it is appropriate (or not), and the implications arising from these decisions. The text directly engages with policy, the Australian Curriculum, pedagogy, learning and wider issues of equity, access, generational stereotypes and professional learning. The contributors to the book are notable figures from across a broad range of Australian universities, giving the text a unique relevance to Australian education while retaining its universal appeal. Teaching and Digital Technologies is an essential contemporary resource for early childhood, primary and secondary pre-service and in-service teachers in both local and international education environments.

### STRENGTHENING FORENSIC SCIENCE IN THE UNITED STATES

---

---

### A PATH FORWARD

---

*National Academies Press* Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full

account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

#### STATE, LAND AND DEMOCRACY IN SOUTHERN AFRICA

---

*Routledge* Each country in southern Africa has a unique history but in all of them socio-economic inequalities and high poverty levels weaken the governments' legitimacy and represent a challenge to models of economic development. One key issue appears to be the solution of the land question. This vital concern affects both citizenship and democracy in the political systems of the region, yet no government has shown the capacity or commitment to solve it. In this volume leading European, American and African scholars explore in detail the relationship between state, land and democracy. They examine the historical background of asset allocation and its impact on questions of nationality, the definition of citizenship, human rights and the current political and economic processes in southern Africa.

#### DIGITAL DIPLOMACY

---

---

#### THEORY AND PRACTICE

---

*Routledge* This book analyses digital diplomacy as a form of change management in international politics. The recent spread of digital initiatives in foreign ministries is often argued to be nothing less than a revolution in the practice of diplomacy. In some respects this revolution is long overdue. Digital technology has changed the ways firms conduct business, individuals conduct social relations, and states conduct governance internally, but states are only just realizing its potential to change the ways all aspects of interstate interactions are conducted. In particular, the adoption of digital diplomacy (i.e., the use of social media for diplomatic purposes) has been implicated in changing practices of how diplomats engage in information management, public diplomacy, strategy planning, international negotiations or even crisis management. Despite these significant changes and the promise that digital diplomacy offers, little is known, from an analytical perspective, about how digital diplomacy works. This volume, the first of its kind, brings together established scholars and experienced policy-makers to bridge this analytical gap. The objective of the book is to theorize what digital diplomacy is, assess its relationship to traditional forms of diplomacy, examine the latent power dynamics inherent in digital diplomacy, and assess the conditions under which digital diplomacy informs, regulates, or constrains foreign policy. Organized around a common theme of investigating digital diplomacy as a form of change management in the international system, it combines diverse theoretical, empirical, and policy-oriented chapters centered on international change. This book will be of much interest to students of diplomatic studies, public diplomacy, foreign policy, social media and international relations.

#### AN ENGINE, NOT A CAMERA

---

---

#### HOW FINANCIAL MODELS SHAPE MARKETS

---

*MIT Press* In *An Engine, Not a Camera*, Donald MacKenzie argues that the emergence of modern economic theories of finance affected financial markets in fundamental ways. These new, Nobel Prize-winning theories, based on elegant mathematical models of markets, were not simply external analyses but intrinsic parts of economic processes. Paraphrasing Milton Friedman, MacKenzie says that economic models are an engine of inquiry rather than a camera to reproduce empirical facts. More than that, the emergence of an authoritative theory of financial markets altered those markets fundamentally. For example, in 1970, there was almost no trading in financial derivatives such as "futures." By June of 2004, derivatives contracts totaling \$273 trillion were outstanding worldwide. MacKenzie suggests that this growth could never have happened without the development of theories that gave derivatives legitimacy and explained their complexities. MacKenzie examines the role played by finance theory in the two most serious crises to hit the world's financial markets in recent years: the stock market crash of 1987 and the market turmoil that engulfed the hedge fund Long-Term Capital Management in 1998. He also looks at finance theory that is somewhat beyond the mainstream—chaos theorist Benoit Mandelbrot's model of "wild" randomness. MacKenzie's pioneering work in the social studies of finance will interest anyone who wants to understand how America's financial markets have grown into their current form.

#### THE GLOBALIZATION PARADOX

---

---

#### WHY GLOBAL MARKETS, STATES, AND DEMOCRACY CAN'T COEXIST

---

*Oxford University Press* For a century, economists have driven forward the cause of globalization in financial institutions, labour markets, and trade. Yet there have been consistent warning signs that a global economy and free trade might not always be advantageous. Where are the pressure points? What could be done about them? Dani Rodrik examines the back-story from its seventeenth-century origins through the milestones of the gold standard, the Bretton Woods Agreement, and the Washington Consensus, to the present day. Although economic globalization has enabled unprecedented levels of prosperity in advanced countries and has been a boon to hundreds of millions of poor workers in China and elsewhere in Asia, it is a concept that rests on shaky pillars, he contends. Its long-term sustainability is not a given. The heart of Rodrik's argument is a fundamental 'trilemma': that we cannot simultaneously pursue democracy, national self-determination, and economic globalization. Give too much power to governments, and you have protectionism. Give markets too much freedom, and you have an unstable world economy with little social and political support from those it is supposed to help. Rodrik argues for smart globalization, not maximum globalization.

#### MEASURING CAPITAL IN THE NEW ECONOMY

---

*University of Chicago Press* As the accelerated technological advances of the past two decades continue to reshape the United States' economy, intangible assets and high-technology investments are taking larger roles. These developments have raised a number of

concerns, such as: how do we measure intangible assets? Are we accurately appraising newer, high-technology capital? The answers to these questions have broad implications for the assessment of the economy's growth over the long term, for the pace of technological advancement in the economy, and for estimates of the nation's wealth. In *Measuring Capital in the New Economy*, Carol Corrado, John Haltiwanger, Daniel Sichel, and a host of distinguished collaborators offer new approaches for measuring capital in an economy that is increasingly dominated by high-technology capital and intangible assets. As the contributors show, high-tech capital and intangible assets affect the economy in ways that are notoriously difficult to appraise. In this detailed and thorough analysis of the problem and its solutions, the contributors study the nature of these relationships and provide guidance as to what factors should be included in calculations of different types of capital for economists, policymakers, and the financial and accounting communities alike.

## DEBT

### THE FIRST 5,000 YEARS

*Melville House Publishing* Economic history states that money replaced a bartering system, yet there isn't any evidence to support this axiom. Anthropologist Graeber presents a stunning reversal of this conventional wisdom. For more than 5000 years, humans have used elaborate credit systems to buy and sell goods. Since the beginning of the agrarian empires, humans have been divided into debtors and creditors. Through time, virtual credit money was replaced by gold and the system as a whole went into decline. This fascinating history is told for the first time.

### GLOBAL INCOME INEQUALITY

#### WHAT IT IS AND WHY IT MATTERS

*World Bank Publications* "The paper presents a nontechnical summary of the current state of debate on the measurement and implications of global inequality (inequality between citizens of the world). It discusses the relationship between globalization and global inequality. And it shows why global inequality matters and proposes a scheme for global redistribution."--World Bank web site.

### DISEASE CONTROL PRIORITIES, THIRD EDITION (VOLUME 9)

#### IMPROVING HEALTH AND REDUCING POVERTY

*World Bank Publications* As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

### ONE ECONOMICS, MANY RECIPES

#### GLOBALIZATION, INSTITUTIONS, AND ECONOMIC GROWTH

*Princeton University Press* In *One Economics, Many Recipes*, leading economist Dani Rodrik argues that neither globalizers nor antiglobalizers have got it right. While economic globalization can be a boon for countries that are trying to dig out of poverty, success usually requires following policies that are tailored to local economic and political realities rather than obeying the dictates of the international globalization establishment. A definitive statement of Rodrik's original and influential perspective on economic growth and globalization, *One Economics, Many Recipes* shows how successful countries craft their own unique strategies--and what other countries can learn from them. To most proglobalizers, globalization is a source of economic salvation for developing nations, and to fully benefit from it nations must follow a universal set of rules designed by organizations such as the World Bank, the International Monetary Fund, and the World Trade Organization and enforced by international investors and capital markets. But to most antiglobalizers, such global rules spell nothing but trouble, and the more poor nations shield themselves from them, the better off they are. Rodrik rejects the simplifications of both sides, showing that poor countries get rich not by copying what Washington technocrats preach or what others have done, but by overcoming their own highly specific constraints. And, far from conflicting with economic science, this is exactly what good economics teaches.

### BECOMING A DIVERSITY LEADER ON CAMPUS

#### NAVIGATING IDENTITY AND SITUATIONAL PRESSURES

*Routledge* Illuminating the emerging importance of the diversity leader on college campuses, this book offers perspectives and narratives from diversity leaders at institutions of higher education. *Becoming a Diversity Leader on Campus* unpacks the tension of how

diversity leadership is shaped by external factors and pressures that confront colleges and universities, as well as by the unique experiences and identities of the individuals appointed to diversity leadership positions. This book offers a better understanding of how diversity leaders make meaning and sense of their roles, desire, and passion for promoting diversity within their institutions. Chapter authors offer narratives that represent their realities regarding the concept of diversity leadership, how they came to be in their roles, and how diversity leaders do diversity work. This important resource provides practical strategies and guides faculty and higher education professionals in navigating the situational, contextual, and relational constructs within the social and cultural contexts of college and university campuses.

#### TRANSITIONS TO SUSTAINABILITY

---

*Springer* This book calls for the conditions of transition to sustainability: How to take into consideration new global phenomena such as and of the dimension of climate change, the depletion of natural resources, financial crises, demographic dynamics, global urbanization, migrations and mobility, while bearing in mind short-term or local place-based issues, such as social justice or quality of life? Meeting this challenge requires an inclusive approach of sustainability. It is a matter of designing a new social contract: Sustainability requires more than developing the right markets, institutions and metrics, it requires social momentum. To do so, many issues need a clear and complete answer: How to link social justice with sustainability policies? What governance tools to do so? What linkage between one decision-making level and the other? These are major issues to design sound transitions to sustainability.

#### MAKING SUSTAINABLE LOCAL TRANSPORT HAPPEN

---

*The Stationery Office* This White Paper, entitled "Creating growth, cutting carbon: making sustainable local transport happen", sets out the Government's aims in meeting two key objectives: (i) to help create growth in the economy; (ii) tackling climate change by cutting carbon emissions. Action at the local level is seen as delivering gains at the national level. For example, around every three trips made by car are less than 5 miles in length, and it could be argued many such trips could alternatively be cycled, walked or undertaken by public transport. The Government sees the encouragement of sustainable travel choices benefiting the economy, cutting carbon and contributing to road safety and public health. The new Local Sustainable Transport Fund aims to help local authorities to encourage people to travel sustainably. The publication is divided into nine chapters with one annex, and looks at the following areas: local transport - choices and implications; decentralising power - enabling local delivery; enabling sustainable transport choices; active travel; making transport more attractive; managing traffic to reduce carbon and tackle congestion; local transport in society.

#### REWRITING THE RULES OF THE EUROPEAN ECONOMY: AN AGENDA FOR GROWTH AND SHARED PROSPERITY

---

*W. W. Norton & Company* A companion to his acclaimed work in *Rewriting the Rules of the American Economy*, Joseph E. Stiglitz, along with Carter Dougherty and the Foundation for European Progressive Studies, lays out the economic framework for a Europe with faster growth that is more equitably shared. Europe is in crisis. Sluggish economic growth in many countries, widespread income stagnation, and recession have led to severe political and social consequences. Social protections for citizens have been cut back. Governments offer timid responses to deep-seated problems. These economic and political failures have contributed to the rise of extremist parties on the right. Marginalized populations are being made scapegoats for Europe's woes. But the problems of today's Europe stem from decisions based on a blind worship of markets in too many areas of policy. If Europe is to return to an innovative and dynamic economy—and if there is to be shared prosperity, social solidarity, and justice—then EU countries need to break with their current, destructive trajectory. This volume offers concrete strategies for renewal that would also reinvigorate the project of European integration, with fresh ideas in the areas of both macroeconomics and microeconomics, including central banking, public investment, corporate governance and competition policy, social policy, and international trade.

#### CROSSING THE QUALITY CHASM

---

---

#### A NEW HEALTH SYSTEM FOR THE 21ST CENTURY

---

*National Academies Press* Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

#### CLIMATE CHANGE AND AVIATION

---

---

#### ISSUES, CHALLENGES AND SOLUTIONS

---

*Routledge* 'This is a timely, challenging and fascinating book on a topic of central importance to the success or otherwise of our climate change policies. It sets down a clear marker for what has to be done in the aviation sector.' Professor John Whitelegg, Stockholm Environment Institute, University of York, UK 'Climate Change and Aviation presents a clear picture of the transport sector's greatest challenge: how to reconcile aviation's immense popularity with its considerable environmental damage and its dependence on liquid hydrocarbon energy sources. This book avoids wishful thinking and takes the much harder, but more productive, path of considering difficult solutions that clash with short-term and short-sighted expectations about the unlimited growth potential for flying.' Professor

Anthony Perl, Urban Studies Program, Simon Fraser University, Canada 'A convincing and timely collection that brings together an impressive range of expertise. The book integrates various perspectives into a powerful core argument - we must do something, and quickly, to tackle the impact of aviation on our environment. The authors recognise the political difficulties associated with promoting change but present constructive options for policy makers. Required reading, especially for transport ministers set on promoting the growth of air travel.' Professor Jon Shaw, Director of the Centre for Sustainable Transport, University of Plymouth, UK Trends such as the massive growth in availability of air travel and air freight are among those which have led to aviation becoming one of the fastest growing emitters of greenhouse gases. These trends have also caused a shift in expectations of how we do business, where we go on holiday, and what food and goods we can buy. For these reasons aviation is (and is set to stay) high up on global political, organizational and media agendas. This textbook is the first to attempt a comprehensive review of the topic, bringing together an international team of leading scientists. Starting with the science of the environmental issues, it moves on to cover drivers and trends of growth, socio-economics and politics, as well as mitigation options, the result being a broad yet detailed examination of the field. This is essential reading for undergraduate and postgraduate courses in transport, tourism, the environment, geography and beyond, while also being a valuable resource for professionals and policymakers seeking a clear understanding of this complex yet urgently pressing issue.

### PAIN MANAGEMENT AND THE OPIOID EPIDEMIC

---

### BALANCING SOCIETAL AND INDIVIDUAL BENEFITS AND RISKS OF PRESCRIPTION OPIOID USE

---

*National Academies Press* Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

### THE UK LOW CARBON TRANSITION PLAN

---

### NATIONAL STRATEGY FOR CLIMATE AND ENERGY

---

*Stationery Office* This White Paper sets out the UK's transition plan to 2020 for becoming a low carbon country: cutting emissions, maintaining secure energy supply, maximising economic opportunities and protecting the most vulnerable. The plan will deliver emission cuts of 18 per cent on 2008 levels. Key steps include: all government departments to have carbon budgets; 40 per cent of energy from low carbon sources including 30 per cent of energy from renewables; funding of four demonstrations of capturing and storing emissions from coal power stations; new nuclear power stations. Home will be made greener by: £3.2 billion to help households become more energy efficient; rolling out smart meters to all homes by 2020; piloting "pay as you save" schemes; introducing clean energy cash-back schemes; a competition for 15 towns and villages to be pioneers in green innovation. Vulnerable sections of society will be helped by: mandated social price support; piloting a community-based approach to delivering green homes in low income areas, helping around 90,000 homes; increasing Warm Front grants. The greening of industry will be addressed through support for development and use of clean technologies, including £120 million in offshore wind and £60 million towards marine energy. Transport will be transformed: carbon dioxide emissions from new cars to be cut across the EU by 40 per cent on 2007 levels and increased support for electric cars; sourcing 10 per cent of UK transport energy from renewable sources. A framework for emissions from farming will be developed. Also published are "The UK renewable energy strategy" (Cm. 7686, ISBN 9780101768627) and "Low carbon transport" (Cm. 7682, ISBN 9780101768221).

### MANAGING THE RISKS OF EXTREME EVENTS AND DISASTERS TO ADVANCE CLIMATE CHANGE ADAPTATION

---

### SPECIAL REPORT OF THE INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE

---

*Cambridge University Press* This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

### REFLECTIVE PRACTICE IN NURSING

### THE FUTURE OF NURSING

---

### LEADING CHANGE, ADVANCING HEALTH

---

*National Academies Press* The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient

care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
