This book addresses the needs of such scholars - whether they are students doing research at postgraduate level or more experienced researchers who want to familiarize themselves with methods outside their current field of expertise. The book promotes a discerning and critical approach to scholarly investigation by providing the reader not only with the know-how but also with insights into how new questions can be fruitfully explored through the coherent integration of different methods of research. Understanding core principles of reliability, validity and ethics is essential for any researcher no matter what methodology they adopt, and a whole chapter is therefore devoted to these issues. Research Methodologies in Translation Studies is divided into four different chapters, according to whether the research focuses on the translation product, the process of translation, the participants involved or the context in which translation takes place. An introductory chapter discusses issues of reliability, credibility, validity and ethics. The impact of our research depends not only on its quality but also on successful dissemination, and the final chapter therefore deals with what is also generally the final stage of the research process: producing a research report. **Contrasting English and Other Languages through Corpora Cambridge Scholars Publishing** This volume is grounded on the latest research in empirical contrastive language studies, addressing several issues on contrasts between English and other languages. It results from an annual workshop on language contrasts, organised by the International Computer Archive of Modern and Medieval English (ICAME), and covers a wider range of phenomena in phraseology, discourse and pragmatics. As it relies on data from parallel or comparable corpora, it gives valuable insights into cross-linguistic differences between English and other languages, which might otherwise go unnoticed. The book will be useful to experts on language studies and advanced students with an interest in linguistics. It will serve as a catalyst to other researchers interested in the contrastive analysis of the English language. The results of the linguistic analyses described within will be valuable for practical applications in lexicography, language teaching and translation (both human and machine), including translator training. **Advances in Corpus-Based Contrastive Linguistics Studies in Honour of Stig Johansson John Benjamins Publishing** Contrastive studies have experienced a dramatic revival in the last decades. By combining the methodological advantages of computer corpus linguistics and the possibility of contrasting texts in two or more languages, the structure and use of languages can be explored with greater accuracy, detail and empirical strength than before. The approach has also proved to have fruitful practical applications in a number of areas such as language teaching, lexicography, translation studies and computer-aided translation. This volume contains twelve studies comparing linguistic phenomena in English and seven other languages. The topics range from comparisons of specific lexical categories and word combinations to syntactic constructions and discourse phenomena such as cohesion and thematic structure. The studies highlight similarities and differences in the use, semantics and functions of the compared items, as well as the emergence of new meanings and language change. The emphasis varies from purely linguistic studies to those focusing on practical applications. **Quantitative Methods in Corpus-based Translation Studies A Practical Guide to Descriptive Translation Research John Benjamins Publishing** This is a comprehensive guidebook to the quantitative methods needed for Corpus-Based Translation Studies (CBTS). It provides a systematic description of the various statistical tests used in Corpus Linguistics which can be used in translation research. In Part 1, Theoretical Explorations, the interplay between quantitative and qualitative methodologies is explored. Part 2, Essential Corpus Studies, describes how to undertake quantitative studies, with a suitable level of technical and relevant case studies. Part 3, Quantitative Explorations of Literary Translations, looks at translations of classic works by Cao Xueqin, James Joyce and other authors. Finally, Part 4 on Translation Lexis uses a variety of techniques new to translation studies, including multivariate analysis and game theory. This book is aimed at students and researchers of corpus linguistics, translation studies and quantitative linguistics. It will significantly advance current translation studies in terms of methodological innovation and will fill in an important gap in the development of quantitative methods for interdisciplinary

translation studies. **Cross-Linguistic Perspectives on Verb Constructions Cambridge Scholars Publishing** This volume sheds new light on verb constructions by exposing them to cross-linguistic analysis based on multilingual corpora. It is composed of nine studies which provide insights into various aspects of cross-linguistic diversity, including showing that seemingly equivalent verb constructions may differ in their semantics, and that similar meanings may be expressed by different types of constructions. In other words, this book shows that different languages have different ways of lexicalising verb-based meanings, most notably by means of other, divergent verb constructions. A range of lexicogrammatical aspects of verb constructions are explored throughout the book, including time reference; modality; voice; light verb constructions; non-finite complementation of lexical verbs; posture-verb constructions; semiperiphrastic constructions; and the construction and semantic composition of verbs of putting. All of the contributions consider English in comparison with at least one of the following languages: Czech, German, Lithuanian, Norwegian, Spanish, and Swedish. As such, this volume offers a truly multilingual perspective on verb constructions. The diversity of comparisons also highlights the multi-faceted nature of the verb phrase, which seems to have virtually limitless potential for exploration in the fields of tense, aspect, modality, lexical semantics, syntax, and phraseology. **DICES international guide postgraduate programmes Patterns in Contrast John Benjamins Publishing** Combining the fields of phraseology and contrastive analysis, this book describes how patterns, defined as recurrent word-combinations with semantic unity, behave cross-linguistically. As the contrastive approach adopted in the book relies on translations and a bidirectional corpus model, the first part offers an in-depth discussion of contrastive linguistics, with special emphasis on using translations as tertium comparationis and a parallel corpus as the main source of material. Central to the contrastive analysis is the use of corpus-linguistic methods in the identification of patterns, while a deeper understanding of the phraseological nature of the patterns is closely related to the concept of extended units of meaning. The second part of the book presents five case studies, using an easy-to-follow step-by-step method to illustrate the phraseological-contrastive approach at work. The studies show that patterns weave an intricate web of meanings across languages and demonstrate the potential of exploring patterns in contrast. **Cross-linguistic Correspondences From lexis to genre John Benjamins Publishing Company** Contrastive Linguistics is an expanding field, as witnessed by the publication in recent years of an increasing number of monographs, collected volumes and journal articles. The present volume, which comprises an introduction and ten chapters dealing with lexical contrasts between English and other languages, shows advances within the well-established lexical work in the field. Each of the chapters takes lexical items as its starting point and compares English with one or more languages. The languages represented are Spanish, Lithuanian, Swedish, German, Norwegian and Czech. Furthermore, they emphasise the link between lexis and grammar, not only within the same language, but also across languages. Finally, several studies represent one of the more recent developments of contrastive linguistics, namely a growing focus on genre and register comparisons. The book should appeal to both established scholars and advanced students with an interest in lexis, genre, corpus linguistics and/or contrastive linguistics. **Translation-Driven Corpora Corpus Resources for Descriptive and Applied Translation Studies Routledge** Electronic texts and text analysis tools have opened up a wealth of opportunities to higher education and language service providers, but learning to use these resources continues to pose challenges to scholars and professionals alike. Translation-Driven Corpora aims to introduce readers to corpus tools and methods which may be used in translation research and practice. Each chapter focuses on specific aspects of corpus creation and use. An introduction to corpora and overview of applications of corpus linguistics methodologies to translation studies is followed by a discussion of corpus design and acquisition. Different stages and tools involved in corpus compilation and use are outlined, from corpus encoding and annotation to indexing and data retrieval, and the various methods and techniques that allow end users to make sense of corpus data are described. The volume also offers detailed guidelines for the construction and analysis of multilingual corpora. Corpus creation and use are illustrated through practical examples and case studies, with each chapter outlining a set of tasks aimed at guiding researchers, students and translators to practice some of the methods and use some of the resources discussed. These tasks are meant as hands-on activities to be carried out using the materials and links available in an accompanying DVD. Suggested further readings at the end of each chapter are complemented by an extensive bibliography at the end of the volume. Translation-Driven Corpora is designed for use by teachers and students in the classroom or by researchers and professionals for self-learning. It is an invaluable resource for anyone interested in this fast growing area of scholarly and professional activity. **Handbook of Research on Big Data Storage and Visualization Techniques IGI Global** The digital age has presented an exponential growth in the amount of data available to individuals looking to draw conclusions based on given or collected information across industries. Challenges associated with the analysis, security, sharing, storage, and visualization of large and complex data sets continue to plague data scientists and analysts alike as traditional data processing applications struggle to adequately manage big data. The Handbook of Research on Big Data Storage and Visualization Techniques is a critical scholarly resource that explores big data analytics and technologies and their role in developing a broad understanding of issues pertaining to the use of big data in multidisciplinary fields. Featuring coverage on a broad range of topics, such as architecture patterns, programming systems, and computational energy, this publication is geared towards professionals, researchers, and students seeking current research and application topics on the subject. **Manual for Collaborative Organizational Assessment in Human Settlements Organizations A Manual for Assessing the Effectiveness of Human Settlements Institutions UN-HABITAT** **Interest Rate Models - Theory and Practice With Smile, Inflation and Credit Springer Science & Business Media** The 2nd edition of this successful book has several new features. The calibration discussion of the basic LIBOR market model has been enriched considerably, with an analysis of the impact of the swaptions interpolation technique and of the exogenous instantaneous correlation on the calibration outputs. A discussion of historical estimation of the instantaneous correlation matrix and of rank reduction has been added, and a LIBOR-model consistent swaption-volatility interpolation technique has been introduced. The old sections devoted to the smile issue in the LIBOR market model have been enlarged into a new chapter. New sections on local-volatility dynamics, and on stochastic volatility models have been added, with a thorough treatment of the recently developed uncertain-volatility approach. Examples of calibrations to real market data are now considered. The fast-growing interest for hybrid products has led to a new chapter. A special focus here is devoted to the pricing of inflation-linked derivatives. The three final new chapters of this second edition are devoted to credit. Since Credit Derivatives are increasingly fundamental, and since

in the reduced-form modeling framework much of the technique involved is analogous to interest-rate modeling, Credit Derivatives -- mostly Credit Default Swaps (CDS), CDS Options and Constant Maturity CDS - are discussed, building on the basic short rate-models and market models introduced earlier for the default-free market. Counterparty risk in interest rate payoff valuation is also considered, motivated by the recent Basel II framework developments.

Voices Past and Present - Studies of Involved, Speech-related and Spoken Texts In honor of Merja Kytö John Benjamins Publishing Company This volume provides a diachronic and synchronic overview of linguistic variability and change in involved, speech-related and spoken texts in English. While previous works on the topic have focused on more limited time periods, this book covers data from the 16th century up to the present day. The studies offer new insights into historical and present-day corpus pragmatics by identifying and exploring features of orality in a variety of registers. For readers who are new to the field, the range of approaches will provide a helpful overview; for readers who are already familiar with the field, the volume will shed light on the complexity of factors such as register, sociolinguistic variability and language attitude, thus making it a useful resource and stepping stone for further exploration. The volume celebrates the groundbreaking contributions of Professor Merja Kytö in making accessible speech-related corpus material and leading the way in its exploration.

Time in Languages, Languages in Time John Benjamins Publishing Company This volume comprises a collection of contrastive studies on language and time. Languages represented include Czech, French, German, Mandarin, Norwegian and Swedish, all of which are contrasted with English. While the amount of published research on temporal relations in general is considerable, less work has been carried out on comparing how we talk about time in various languages and how languages change over time. Several methodological challenges are addressed and solutions proposed, such as how to deal with poor quality historical data and how to identify n-grams in typologically different languages for purposes of comparison. The results of the various studies show how multilingual corpora can increase our knowledge of language-specific features as well as linguistic, typological and cultural differences and similarities across languages.

Parallel Corpora for Contrastive and Translation Studies New resources and applications John Benjamins Publishing Company This volume assesses the state of the art of parallel corpus research as a whole, reporting on advances in both recent developments of parallel corpora - with some particular references to comparable corpora as well- and in ways of exploiting them for a variety of purposes. The first part of the book is devoted to new roles that parallel corpora can and should assume in translation studies and in contrastive linguistics, to the usefulness and usability of parallel corpora, and to advances in parallel corpus alignment, annotation and retrieval. There follows an up-to-date presentation of a number of parallel corpus projects currently being carried out in Europe, some of them multimodal, with certain chapters illustrating case studies developed on the basis of the corpora at hand. In most of these chapters, attention is paid to specific technical issues of corpus building. The third part of the book

reflects on specific applications and on the creation of bilingual resources from parallel corpora. This volume will be welcomed by scholars, postgraduate and PhD students in the fields of contrastive linguistics, translation studies, lexicography, language teaching and learning, machine translation, and natural language processing. **DayWater An Adaptive Decision Support System for Urban Stormwater Management IWA Publishing** The European DayWater project has developed a prototype of an Adaptive Decision Support System (ADSS) related to urban stormwater pollution source control. The DayWater ADSS greatly facilitates decision-making for stormwater source control, which is currently impeded by the large number of stakeholders involved and by the necessary multidisciplinary knowledge. This book presents the results of this project, providing new insights into both technical and management issues. The main objectives of its technical chapters are pollution source control modelling, risk and impact assessment, and evaluation and comparison of best management practices. It also covers management aspects, such as the analysis of the decision-making processes in stormwater source control, at a European scale, and stormwater management strategies in general. The combination of scientific-technical and socio-managerial knowledge, with the strong cooperation of numerous end-users, reflects the innovative character of this book which includes actual applications of the ADSS prototype in significant case studies. DayWater: an Adaptive Decision Support System for Urban Stormwater Management contains 26 chapters collectively prepared by DayWater scientific partners and end-users associated with this European Research and Development project. It includes: A general presentation of the DayWater Adaptive Decision Support System (ADSS) structure and operation modes A detailed description of the major components of this ADSS prototype The assessment of its components in significant case studies in France, Germany and Sweden The proceedings of the International Conference on Decision Support Systems for Integrated Urban Water Management, held in Paris on 3-4 November 2005. The book presents the ADSS prototype including a combination of freely accessible on-line databases, guidance documents, "road maps" and modelling or multi-criteria analysis tools. As demonstrated in several significant case studies the challenge for stormwater managers is to make the benefits of urban stormwater management visible to society, resulting in active co-operation of a diversity of stakeholders. Only then, will sustainable management succeed. DayWater: an Adaptive Decision Support System for Urban Stormwater Management advances this cause of sustainable urban management through Urban stormwater management, and makes achievable (by means of risk and vulnerability tools which are included) the goal of integrated urban water management (IUWM). **Rapid Access Guide for Pediatric Emergencies Providing Expert Nursing Care Springer Publishing Company** Delineates essential pediatric knowledge and skills that will greatly enhance nursing orientation and ongoing education This pocket-sized resource for nurses confronting pediatric emergencies provides immediate access to vital, life-saving information. He incorporates many examples and applications that illustrate the power and utility of this theory in a range of disciplines-from analysis and number theory to statistics, engineering, economics, and population biology. With an emphasis on the simplicity of the mathematics and smooth transitions between topics, the Second Edition boasts major revisions of the sections on dependent random variables as well as new sections on relative measure, on lacunary trigonometric series, and on the Poisson-Dirichlet distribution as a description of the long cycles in permutations and the large divisors of integers. Assuming only standard measure-theoretic probability and metric-space topology, Convergence of Probability Measures provides statisticians and mathematicians with basic tools of probability theory as well as a springboard to the "industrial-strength" literature available today. **OECD Studies on Water Making Blended Finance Work for Water and Sanitation Unlocking Commercial Finance for SDG 6 OECD Publishing** Investments in water and sanitation are a prerequisite to deliver on the Sustainable Development Goals (SDGs), in particular on SDG 6 ensuring availability and sustainable management of water and sanitation for all. Blended finance can play an important role in strategically investing development finance to mobilise additional commercial finance needed to fill the current investment gaps. Thus far, however, blended finance has not reached scale in the water and sanitation sector. A greater evidence base is needed to better understand the current applications as well as the potential of blended models in the water and sanitation sector. This publication takes a commercial investment perspective and provides insights into three subsectors: (1) water and sanitation utilities, (2) small-scale off-grid sanitation and (3) multi-purpose water infrastructure and landscape-based approaches. The publication draws out recommendations for policy makers and practitioners to apply and scale innovative blended finance approaches where most appropriate.
