## Review of the Research Program of the FreedomCAR and

# Fuel Partnership

## Third Report

**National Academies Press** The public-private partnership to develop vehicles that require less petroleum-based fuel and emit fewer greenhouse gases should continue to include fuel cells and other hydrogen technologies in its research and development portfolio. The third volume in the FreedomCAR series states that, although the partnership's recent shift of focus toward technologies that could be ready for use in the nearer term—such as advanced combustion engines and plug-in electric vehicles—is warranted, R&D on hydrogen and fuel cells is also needed given the high costs and challenges that many of the technologies must overcome before widespread use. The FreedomCAR (Cooperative Automotive Research) and Fuel Partnership is a research collaboration among the U.S. Department of Energy, the United States Council for Automotive Research - whose members are the Detroit automakers-five major energy companies, and two electric utility companies. The partnership seeks to advance the technologies essential for components and infrastructure for a full range of affordable, clean, energy efficient cars and light trucks. Until recently, the program primarily focused on developing technologies that would allow U.S. automakers to make production and marketing decisions by 2015 on hydrogen fuel cell-powered vehicles. These vehicles have the potential to be much more energy-efficient than conventional gasoline-powered vehicles, produce no harmful tailpipe emissions, and significantly reduce petroleum use. In 2009, the partnership changed direction and stepped up efforts to advance, in the shorter term, technologies for reducing petroleum use in combustion engines, including those using biofuels, as well as batteries that could be used in plug-in hybrid-electric or all electric vehicles.

## Review of the 21st Century Truck Partnership

National Academies Press The 21st Century Truck Partnership (21CTP), a cooperative research and development partnership formed by four federal agencies with 15 industrial partners, was launched in the year 2000 with high hopes that it would dramatically advance the technologies used in trucks and buses, yielding a cleaner, safer, more efficient generation of vehicles. Review of the 21st Century Truck Partnership critically examines and comments on the overall adequacy and balance of the 21CTP. The book reviews how well the program has accomplished its goals, evaluates progress in the program, and makes recommendations to improve the likelihood of the Partnership meeting its goals. Key recommendations of the book include that the 21CTP should be continued, but the future program should be revised and better balanced. A clearer goal setting strategy should be developed, and the goals should be clearly stated in measurable engineering terms and reviewed periodically so as to be based on the available funds.

### Review of NASA's Aerospace Technology Enterprise An Assessment of NASA's Aeronautics Technology Programs

**National Academies Press** The National Research Council (NRC) of the National Academies was asked by NASA and the Office of Management and Budget to perform an assessment of NASA's Aerospace Technology Enterprise. The first such review, which began in early 2002, examined Pioneering Revolutionary Technology (now known as Mission and Science Measurement Technology). The assessment presented here, of the Aeronautics Technology Programs, began in early 2003 and is the second in the review series. The Aeronautics Technology Programs has three components: the Vehicle Systems Program, the Airspace Systems Program, and the Aviation Safety Program. To conduct this review, the NRC established three panels, one for each of the component programs. The NRC also established a parent committee, consisting of the chairman and a subset of members from each panel. The committee and panels comprised a cross-section of experts from industry, academia, and government and included senior-level managers and researchers in the aeronautics field. Biographical information on the committee and panel members is found in Appendix A. Review of NASA's Aerospace Technology Enterprise: An Assessment of NASA's Aeronautics Technology Programs contains the committee's assessment of the Aeronautics Technology Programs. Chapter 1 presents a top-level assessment, and Chapters 2 through 4 provide the assessments of the Vehicle Systems Program, the Airspace Systems Program, and the Aviation Safety Program, respectively.

### Application of Systematic Review Methods in an Overall Strategy for Evaluating Low-Dose Toxicity from Endocrine Active Chemicals

**National Academies Press** To safeguard public health, the US Environmental Protection Agency (EPA) must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision-making. For decades the agency has dealt with questions about what animal-testing data to use to make predictions about human health hazards, how to perform dose-response extrapolations, how to identify and protect susceptible subpopulations, and how to address uncertainties. As alternatives to traditional toxicity testing have emerged, the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods. Endocrine active chemicals (EACs) have raised concerns that traditional toxicity-testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function, and small alterations in hormone concentrations, particularly during sensitive life stages, can have lasting and significant effects. To address concerns about potential human health effects from EACs at low doses, this report develops a strategy to evaluate the evidence for such low-dose effects.

## The Safety Promise and Challenge of Automotive Electronics

## Insights from Unintended Acceleration

Transportation Research Board TRB has released the final version of TRB Special Report 308: **The Safety Promise and Challenge of Automotive Electronics: Insights from Unintended Acceleration**, which examines how the National Highway Traffic Safety Administration (NHTSA) regulatory, research, and defect investigation programs can be strengthened to meet the safety assurance and oversight challenges arising from the expanding functionality and use of automotive electronics. The report gives particular attention to the NHTSA response to consumer complaints of vehicles accelerating unintentionally and to concerns that faulty electronic systems may have been to blame. The committee that produced the report found that the increasingly capable and complex electronics systems being added to automobiles present many opportunities for making driving safer but also present new demands for ensuring their safe performance. These safety assurance demands pertain both to the automotive industry development and deployment of electronics systems and to the safety oversight role of NHTSA. With regard to the latter, the committee recommends that NHTSA give explicit consideration to the oversight challenges arising from automotive electronics and that the agency develop and articulate a long term strategy for meeting these challenges.

Review of Three Divisions of the Information Technology Laboratory at the National Institute of Standards and Technology

Fiscal Year 2015

**National Academies Press** At the request of the National Institute of Standards and Technology (NIST), the National Academies of Sciences, Engineering, and Medicine has, since 1959, annually assembled panels of experts from academia, industry, medicine, and other scientific and engineering environments to assess the quality and effectiveness of the NIST measurements and standards laboratories, of which there are now seven, as well as the adequacy of the laboratories' resources. Review of Three Divisions of the Information Technology Laboratory at the National Institute of Standards and Technology: Fiscal Year 2015 assesses the organization's technical programs, the portfolio of scientific expertise within the organization, the adequacy of the organization's facilities, equipment, and human resources, and the effectiveness by which the organization disseminates its program outputs.

## Emerging ICT Policies and Regulations

### Roadmap to Digital Economies

Springer Nature This book constructs both educational and research arguments on various dimensions of Information and Communication Technology (ICT) policy and regulation. There has been a paradigm shift in the ICT industry due to convergence of various technologies, the ubiquity of the Internet, the emergence of app economy and the pervasiveness of social media. These pose policy and regulatory challenges in the areas of industry structure, market power of firms, pricing of products and services, interconnection of networks, radio spectrum management, intellectual property rights, data privacy and security. The common thread throughout the different sections of the book is the massive adoption of digitization by individuals, enterprises, governments and societies and the critical role of associated regulation and policy for its success. The book addresses 13 important questions in the areas of: i) Telecom Regulation including bundling of products and services, interconnection, and radio spectrum; (ii) Internet Regulation including governance of the Internet, Net Neutrality, quality of service, and cyber security; (iii) App Economy Regulation including Over The Top communication and broadcast services, ICT platform intermediation, sharing economy, data protection and privacy; and (iv) Emerging Technology Regulation including Artificial Intelligence and Intellectual Property Rights. The book explains technology and related regulatory concepts in an easy-to-read format and includes brief case studies describing the regulatory approaches from different countries. Specific focus is given to the regulatory landscape in India surrounding these questions and the lessons for similar emerging countries. Written in the form of contemporary questions and answers, this unique book appeals to researchers in ICT policy and regulation, regulators and policymakers, as well as students interested in the subject area. "The book comprehensively covers the current and emerging policy and regulatory issues relating to ICT, especially as applicable to India. Further, it provides a theoretical framework for analysing each regulatory issue along with practical implications. A good reference for researchers, regulators and policy makers." - Dr R.S. Sharma, Chairman, Telecom Regulatory Authority of India. "This book by Professor Sridhar provides an excellent overview of the challenges that the world faces in coping with the dynamic new emerging digital technologies that affect the way we work, play and communicate with each other. As the internet and mobile telephony becomes more ubiquitous and accessible to everyone regardless of socio-economic class, ICT can be used for good or for mischief. The book lays out the issues of regulating global ICT and policies that governments should adopt to enable its productive and positive use." - Dr G Anand Anandalingam, Ralph J. Tyser Professor of Management Science, Robert H. Smith School of Business, University of Maryland, U.S.A. "Using problem-centric approach successfully opens the complexity of ICT regulation to a wider audience. Through cleverly chosen topical case examples the book links the problems of Indian and international ICT markets." - Dr Hämmäinen Heikki, Professor, Department of Communications and Networking, Aalto University, Finland. "Prof Sridhar is a Thought Leader in the Telecom space and I have enjoyed my interaction with him over the years. This book is an excellent compendium looking at the main regulations and policies with reference to the ICT sector. It serves as a ready reckoner for new entrants and professionals alike, providing global and local perspectives on topics that impact the growing Digital Economy." - P Balaji, Chief Regulatory and Corporate Affairs Officer, Vodafone Idea Limited, India "Emerging ICT Policies and Regulations: Roadmap to Digital Economies is a must read for understanding essential questions regarding ICT Policy and Regulation as digitization develops locally and globally. With useful information on the case of India (and other countries), the book provides a clear, comprehensive, and cogent capture of relevant concepts and practices as well as emerging challenges. Powerful illustrations make concrete the nuance of regulatory approaches and provide added value for the reader." - Dr. Nanette S. Levinson, Professor, Internet Governance Lab, School of International Service, American University, USA, "Reference books are usually an important source of information but they are often not very readable. I am glad to say that Prof. Sridhar has managed to produce a very-well written account of ICT regulation and policies with a focus on India, and the result is a comprehensive and interesting volume with a number of very useful chapters; many of them easily digested on their own. The book is highly recommended for members of the internet and telecommunications industries, regulators and researchers." - Dr Jairo Gutierrez, Professor and Deputy Head, Engineering Computer and Mathematical Sciences, Auckland University of Technology, New Zealand. "Professor Sridhar's book provides the required regulatory theory and framework on 13 most important issues of the digital economy and provides guidance for setting policies and rules. A comprehensive reference for students and practitioners in the area of ICT regulation." - Dr S Sadagopan, Director and Professor, International Institute of Information Technology Bangalore, India "Emerging ICT Policies and Regulations puts together invaluable and timely research in mapping and analysing the various issues faced by digital economy in India. Prof Sridhar has captured the most pressing issues in it, pertaining to Competition Law and Policy, Intellectual Property Rights, net neutrality, data privacy, regulating OTT services etc., not just comprehensively, but in a reader

friendly way. A must read for anyone wanting to get insights on the numerous challenges involved in optimally regulating ICT driven services". - Pradeep S Mehta, Secretary General, Consumer Unity & Trust Society International, India "The Book is a very exhaustive and excellent collection of contemporary issues & challenges on Policy & Regulation that the Digital Economy is likely to grapple with in the coming years. The research on each of these issues which precedes the suggested outcome ( by the author ) is very comprehensive and includes detailed analysis of the pros and cons, global best practices in the area of Policy Regulation in other Regimes , how the Indian context differs from the others and therefore , how it could possibly be addressed. " - TV Ramachandran, President, Broadband India Forum, India "Whether it is spectrum auction or license fee; net neutrality or interconnection; cybersecurity or privacy; Sridhar peels off layers and presents underlying tensions within the fast-paced technological revolution and rather slow evolution of policy & regulation." - Deepak Maheshwari, Former Secretary - ISP Association of India, Co-Founder - National Internet eXchange of India, Former Chair - IEEE Internet Initiative, India. "An encyclopedic mapping of regulatory challenges and solutions for the sector by the always insightful Prof. Sridhar. Through a single book, he provides an accessible guide to a plurality of regulations impacting the various layers of the OSI model." - Sunil Abraham, Executive Director, Centre for Internet & Society, India

## Gowers Review of Intellectual Property

The Stationery Office This report examines the importance of intellectual property (IP), ranging from patents, copyright, design and trade marks, and whether in the age of globalization, digitization and increasing economic specialization it still creates incentives for innovation, without unduly limiting access to consumers and stifling further innovation. The report does recommend a radical overhaul of the system, with the review concentrating on three areas, and setting out the following recommendations: (i) strengthening enforcement of IP rights, whether through clamping down on piracy or trade in counterfeit goods; (ii) reducing costs of registering and litigating IP rights for businesses large and small; (iii) improving the balance and flexibility of IP rights to allow individuals, businesses and institutions to use content in ways consistent with the digital age.
