## The Drug War in Latin America

## Hegemony and Global Capitalism

**Routledge** Since the mid-1980s subsequent US governments have promoted a highly militarized and prohibitionist drug control approach in Latin America. Despite this strategy the region has seen increasing levels of homicide, displacement and violence. Why did the militarization of U.S. drug war policies in Latin America begin and why has it continued despite its inability to achieve the stated targets? Are such policies simply intended to impose U.S. power or have elites in Latin America internalized this agenda as their own? Why did resistance to this approach emerge in the late-2000s and does this represent a challenge to the prohibitionist agenda? In this book William Avilés argues that if we are to understand and explain the militarization of the drug war in Latin America a 'transnational grand strategy', developed and implemented by networks of elites and state managers operating in a neoliberal, globalized social structure of accumulation, must be considered and examined.

## MEDINFO 2019: Health and Wellbeing e-Networks for All

### Proceedings of the 17th World Congress on Medical and Health Informatics

**IQS Press** Combining and integrating cross-institutional data remains a challenge for both researchers and those involved in patient care. Patient-generated data can contribute precious information to healthcare professionals by enabling monitoring under normal life conditions and also helping patients play a more active role in their own care. This book presents the proceedings of MEDINFO 2019, the 17th World Congress on Medical and Health Informatics, held in Lyon, France, from 25 to 30 August 2019. The theme of this year's conference was 'Health and Wellbeing: E-Networks for All', stressing the increasing importance of networks in healthcare on the one hand, and the patient-centered perspective on the other. Over 1100 manuscripts were submitted to the conference and, after a thorough review process by at least three reviewers and assessment by a scientific program committee member, 285 papers and 296 posters were accepted, together with 47 podium abstracts, 7 demonstrations, 45 panels, 21 workshops and 9 tutorials. All accepted paper and poster contributions are included in these proceedings. The papers are grouped under four thematic tracks: interpreting health and biomedical data, supporting care delivery, enabling precision medicine and public health, and the human element in medical informatics. The posters are divided into the same four groups. The book presents an overview of state-of-the-art informatics projects from multiple regions of the world; it will be of interest to anyone working in the field of medical informatics.

## Paying for the Past

## The Case Against Prior Record Sentence Enhancements

[Oxford University Press, USA](#) All modern sentencing systems, in the US and beyond, consider the offender's prior record to be an important determinant of the form and severity of punishment for subsequent offences. Repeat offenders receive harsher punishments than first offenders, and offenders with longer criminal records are punished more severely than those with shorter records. Yet the vast literature on sentencing policy, law, and practice has generally overlooked the issue of prior convictions, even though this is the most important sentencing factor after the seriousness of the crime. In *Paying for the Past*, Richard S. Frase and Julian V. Roberts provide a critical and systematic examination of current prior record enhancements under sentencing guidelines across the US. Drawing on empirical data and analyses of guidelines from a number of jurisdictions, they illustrate different approaches to prior record enhancements and the differing outcomes of those approaches. Roberts and Frase demonstrate that most prior record enhancements generate a range of adverse outcomes at sentencing. Further, the pervasive justifications for prior record enhancement, such as the repeat offender's assumed higher risk of reoffending or greater culpability, are uncertain and have rarely been subjected to critical appraisal. The punitive sentencing premiums for repeat offenders prescribed by US guidelines cannot be justified on grounds of prevention or retribution. Shining a light on a neglected but critically important topic, *Paying for the Past* examines the costs of prior record enhancements for repeat offenders and offers model guidelines to help reduce racial disparities and reallocate criminal justice resources for jurisdictions who use sentence enhancements.

## The Science of Addiction

"*Drugs, Brains, and Behavior*" is an online textbook written by C. Robin Timmons and Leonard W. Hamilton. The book was previously published by Prentice Hall, Inc. in 1990 as "Principles of Behavioral Pharmacology." The authors attempt to develop an understanding of the interpenetration of brain, behavior and environment. They discuss the chemistry of behavior in both the literal sense of neurochemistry and the figurative sense of an analysis of the reactions with the environment.

## Strengthening Forensic Science in the United States

## A Path Forward

[National Academies Press](#) Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

### Current Studies in HIV Research

Bentham Science Publishers Current Studies in HIV Research brings key topics in HIV/AIDS research to the fore by compiling reviews prepared by HIV/AIDS experts. Readers will benefit from the extensive range of topics covered in this book. Each of the 24 chapters of this volume present a brief account of major facets of HIV/AIDS research including epidemiology, HIV prevention, basic virology, clinical studies (including co-infection with mycobacteria and hepatitis viruses), antiretroviral therapy, treatment options for specific patient groups (such as pregnant women and elderly patients), patient psychology and public health concerns. The book also presents information about issues encountered in practical situations such as management models for non-governmental organizations (NGOs), community involvement in HIV programs and sampling methods in HIV research. Current Studies in HIV Research is, therefore, a useful guide to research information for novice epidemiologists, clinicians, psychologists, sociologists and managers involved in planning and implementing HIV/AIDS research, prevention and monitoring projects.

## World Drug Report 2008

*United Nations* The Report continues to provide in depth trend analysis of the four main drug markets in its first section. In addition, to mark the one hundred year anniversary of the Shanghai Opium Commission, and one hundred years of international drug control, the Report contains an in-depth look at the development of the international drug control system. The Report also contains a small statistical annex which provides a detailed look at production, prices and consumption. As in previous years, the present Report is based on data obtained primarily from the annual reports questionnaire (ARQ) sent by Governments to UNODC in 2007, supplemented by other sources when necessary and where available. Two of the main limitations herein are: (i) that ARQ reporting is not systematic enough, both in terms of number of countries responding and of content, and (ii) that most countries lack the adequate monitoring systems required to produce reliable, comprehensive and internationally comparable data. National monitoring systems are, however, improving and UNODC has contributed to this process.
