Integrating Social Care into the Delivery of Health Care Moving Upstream to Improve the Nation's Health National Academies Press Integrating Social Care into the Delivery of Health Care: Moving Upstream to Improve the Nation's Health was released in September 2019, before the World Health Organization declared COVID-19 a global pandemic in March 2020. Improving social conditions remains critical to improving health outcomes, and integrating social care into health care delivery is more relevant than ever in the context of the pandemic and increased strains placed on the U.S. health care system. The report and its related products ultimately aim to help improve health and health equity, during COVID-19 and beyond. The consistent and compelling

evidence on how social determinants shape health has led to a growing recognition throughout the health care sector that improving health and health equity is likely to depend "at least in part" on mitigating adverse social determinants. This recognition has been bolstered by a shift in the health care sector towards value-based payment, which incentivizes improved health outcomes for persons and populations rather than service delivery alone. The combined result of these changes has been a growing emphasis on health care systems addressing patients' social risk factors and social needs with the aim of improving health outcomes. This may involve health care systems linking individual patients with government and community social services, but important questions need to be answered about when and how health care systems should integrate social care into their practices and what kinds of infrastructure are required to facilitate such activities. Integrating Social Care into the Delivery of Health Care: Moving Upstream to Improve the Nation's Health examines the potential for integrating services addressing social needs and the social determinants of health into the delivery of health care to achieve better health outcomes. This report assesses approaches to social care integration currently being taken by health care providers and systems, and new or emerging approaches and opportunities; current roles in such integration by different disciplines and organizations, and new or emerging roles and types of providers; and current and emerging efforts to design health care systems to improve the nation's health and reduce health inequities. The world of big data, precision medicine, genomics, and telehealth require us to break old paradigms of architecture and functionality while not interrupting existing care processes and revenue cycles... We're dealing with state sponsored cyberterrorism, hacktivism, and organized crime. I describe healthcare IT security as a cold war... You'll hear from the experts who created many of the regulations and best practices we're using today to keep information private. It is also highly susceptible to fraud. Estimates vary, but some observers believe that as much as 10 percent of all medical billing involves some type of fraud. In 2009, New York's Medicaid fraud office recovered \$283 million and obtained 148 criminal convictions. In July 2010, the U.S. Justice Department charged nearly 100 patients, doctors, and health care executives in five states of bilking the Medicare system out of more than \$251 million through false claims for services that were medically unnecessary or never provided. These cases only hint at the scope of the problem. In Phantom Billing, Fake Prescriptions, and the High Cost of Medicine, Terry L. Leap takes on medical fraud and its economic, psychological, and social costs. Illustrated throughout with dozens of specific and often fascinating cases, this book covers a wide variety of crimes: kickbacks, illicit referrals, overcharging and double billing, upcoding, unbundling, rent-a-patient and pill-mill schemes, insurance scams, short-pilling, off-label marketing of pharmaceuticals, and rebate fraud, as well as criminal acts that enable this fraud (mail and wire fraud, conspiracy, and money laundering). After assessing the effectiveness of the federal laws designed to fight health care fraud and abuse—the antikickback statute, the Stark Law, the False Claims Act, HIPAA, and the food and drug laws—Leap suggests a number of ways that health care providers, consumers, insurers, and federal and state officials can bring health care fraud and abuse under control, thereby reducing the overall cost of medical care in America.
