## The Princeton Guide to Evolution

Princeton University Press The Princeton Guide to Evolution is a comprehensive, concise, and authoritative reference to the major subjects and key concepts in evolutionary biology, from genes to mass extinctions. Edited by a distinguished team of evolutionary biologists, with contributions from leading researchers, the guide contains some 100 clear, accurate, and up-to-date articles on the most important topics in seven major areas: phylogenetics and the history of life; selection and adaptation; evolutionary processes; genes, genomes, and phenotypes; speciation and macroevolution; evolution of behavior, society, and humans; and evolution and modern society. Complete with more than 100 illustrations (including eight pages in color), glossaries of key terms, suggestions for further reading on each topic, and an index, this is an essential volume for undergraduate and graduate students, scientists in related fields, and anyone else with a serious interest in evolution. Explains key topics in some 100 concise and authoritative articles written by a team of leading evolutionary biologists Contains more than 100 illustrations, including eight pages in color Each article includes an outline, glossary, bibliography, and cross-references Covers phylogenetics and the history of life; selection and adaptation; evolutionary processes; genes, genomes, and phenotypes; speciation and macroevolution; evolution of behavior, society, and humans; and evolution and modern society

## Teaching About Evolution and the Nature of Science

National Academies Press Today many school students are shielded from one of the most important concepts in modern science: evolution. In engaging and conversational style, Teaching About Evolution and the Nature of Science provides a well-structured framework for understanding and teaching evolution. Written for teachers, parents, and community officials as well as scientists and educators, this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms; it explores how scientists approach the question of evolution; and it illustrates the nature of science as a way of knowing about the natural world. In addition, the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution. The book includes sample activities for teaching about evolution and the nature of science. For example, the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution. Background information, materials, and step-by-step presentations are provided for each activity. In addition, this volume: Presents the evidence for evolution, including how evolution can be observed today. Explains the nature of science through a variety of examples. Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction. Answers frequently asked questions about evolution. Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council--and offers detailed guidance on how to evaluate and choose instructional materials that support the standards. Comprehensive and practical, this book brings one of today's educational challenges into focus in a balanced and reasoned discussion. It will be of special interest to teachers of science, school administrators, and interested members of the community.

## Current Themes in Theoretical Biology

### A Dutch Perspective

Springer Science & Business Media This book originated as a Festschrift to mark the publication of Volume 50 of the journal `Acta Biotheoretica' in 2002 and the journal's 70th anniversary in 2005. In it, eleven previously unpublished research papers have been collected that reflect the entire scope of topics on which `Acta Biotheoretica' publishes. `Acta Biotheoretica' is a journal on theoretical biology, published by Kluwer Academic Publishers, that has its roots in the Dutch tradition of theoretical biology. From the perspective of this tradition, theoretical biology is understood as encompassing a broad spectrum of disciplines ranging from mathematical biology to philosophy of biology. To reflect the Dutch roots of the journal, all papers have been invited from authors that work in The Netherlands. This book is aimed at an audience of theoretical and mathematical biologists, philosophers of biology and philosophers of science, and biologists in general.

## The Evolution of Primate Societies

University of Chicago Press In 1987, the University of Chicago Press published Primate Societies, the standard reference in the field of primate behavior for an entire generation of students and scientists. But in the twenty-five years since its publication, new theories and research techniques for studying the Primate order have been developed, debated, and tested, forcing scientists to revise their understanding of our closest living relatives. Intended as a sequel to Primate Societies, The Evolution of Primate Societies compiles thirty-one chapters that review the current state of knowledge regarding the behavior of nonhuman primates. Chapters are written by the leading authorities in the field and organized around four major adaptive problems primates face as they strive to grow, maintain themselves, and reproduce in the wild. The inclusion of chapters on the behavior of humans at the end of each major section represents one particularly novel aspect of the book, and it will remind readers what we can learn about ourselves through research on nonhuman primates. The final section highlights some of the innovative and cutting-edge research designed to reveal the similarities and differences between nonhuman and human primate cognition. The Evolution of Primate Societies will be every bit the landmark publication its predecessor has been.

## Methuselah Flies

### A Case Study in the Evolution of Aging

World Scientific Methuselah Flies presents a trailblazing project on the biology of aging. It describes research on the first organisms to have their lifespan increased, and their aging slowed, by hereditary manipulation. These organisms are fruit flies from the species *Drosophila melanogaster*, the great workhorse of genetics. Michael Rose and his colleagues have been able to double the lifespan of these insects, and improved their health in numerous respects as well. The study of these flies with postponed aging is one of the best means we have of understanding, and ultimately achieving, the postponement of aging in humans. As such, the carefully presented detail of this book will be of value to research devoted to the understanding and control of aging. Methuselah Flies: • is a tightly edited distillation of twenty years of work by many scientists • contains the original publications regarding the longer-lived fruit flies • offers commentaries on each of the topics covered — new, short essays that put the individual research papers in a wider context • gives full access to the original data • captures the scientific significance of postponed aging for a wide academic audience Contents: Creation and Long-term Evolution of Methuselah Flies Stress, Resistance, Physiology, and Aging Reproduction, Nutrition, and Aging Genetics and Molecular Biology of Methuselah Flies Reverse Evolution of Methuselah Flies Aging, Development, and Crowding Readership: Biologists and doctors interested in the study of aging. Keywords: Aging; Evolution; *Drosophila*; Postponed Senescence; Fruit Flies

### A Visual Guide to Evolution and Genetics

The Rosen Publishing Group, Inc When did anatomically modern humans emerge onto the scene? What traits did humanity leave behind in its development? What traits have we gained, and how might we develop in the future? With this beautifully designed guide, readers will learn the answers to these questions and more. They will explore the study of genetics and discover the impact this particular science has had on humanity as well as on our understanding of the rest of the natural world. They will also touch on genetic diseases and disorders, as well as the implications of genetic modification. Detailed diagrams, full-color illustrations, and engaging language round out this essential text on evolution and genetics.

## Handbook of Evolutionary Psychology

## Ideas, Issues, and Applications

Psychology Press Evolutionary psychology is concerned with the adaptive problems early humans faced in ancestral human environments, the nature of psychological mechanisms natural selection shaped to deal with those ancient problems, and the ability of the resulting evolved psychological mechanisms to deal with the problems people face in the modern world. Evolutionary psychology is currently advancing our understanding of altruism, moral behavior, family violence, sexual aggression, warfare, aesthetics, the nature of language, and gender differences in mate choice and perception. It is helping us understand the relationship between cognitive science, developmental psychology, behavior genetics, personality, and social psychology. Foundations of Evolutionary Psychology provides an up-to-date review of the ideas, issues, and applications of contemporary evolutionary psychology. It is suitable for senior undergraduates, first-year graduate students, or professionals who wish to become conversant with the major issues currently shaping the emergence of this dynamic new field. It will be interesting to psychologists, cognitive scientists, and anyone using new developments in the theory of evolution to gain new insights into human behavior.

## The Evolution of the Sensitive Soul

### Learning and the Origins of Consciousness

MIT Press A new theory about the origins of consciousness that finds learning to be the driving force in the evolutionary transition to basic consciousness. What marked the evolutionary transition from organisms that lacked consciousness to those with consciousness—to minimal subjective experiencing, or, as Aristotle described it, “the sensitive soul”? In this book, Simona Ginsburg and Eva Jablonka propose a new theory about the origin of consciousness that finds learning to be the driving force in the transition to basic consciousness. Using a methodology similar to that used by scientists when they identified the transition from non-life to life, Ginsburg and Jablonka suggest a set of criteria, identify a marker for the transition to minimal consciousness, and explore the far-reaching biological, psychological, and philosophical implications. After presenting the historical, neurobiological, and philosophical foundations of their analysis, Ginsburg and Jablonka propose that the evolutionary marker of basic or minimal consciousness is a complex form of associative learning, which they term unlimited associative learning (UAL). UAL enables an organism to ascribe motivational value to a novel, compound, non-reflex-inducing stimulus or action, and use it as the basis for future learning. Associative learning, Ginsburg and Jablonka argue, drove the Cambrian explosion and its massive diversification of organisms. Finally, Ginsburg and Jablonka propose symbolic language as a similar type of marker for the evolutionary transition to human rationality—to Aristotle’s “rational soul.”

### Religion and Knowledge

### Sociological Perspectives

Routledge Religions have always been associated with particular forms of knowledge, often knowledge accorded special significance and sometimes knowledge at odds with prevailing understandings of truth and authority in wider society. New religious movements emerge on the basis of reformulated, often controversial, understandings of how the world works and where ultimate meaning can be found. Governments have risen and fallen on the basis of such differences and global conflict has raged around competing claims about the origins and content of religious truth. Such concerns give rise to recurrent questions, faced by academics, governments and the general public. How do we treat statements made by religious groups and on what basis are they made? What authorities lie behind religious claims to truth? How can competing claims about knowledge be resolved? Are there instances when it is appropriate to police religious knowledge claims or restrict their public expression? This book addresses the relationship between religion and knowledge from a sociological perspective, taking both religion and knowledge as phenomena located within ever changing social contexts. It builds on historical foundations, but offers a distinctive focus on the changing status of religious phenomena at the turn of the twenty-first century. Including critical engagement with live debates about intelligent design and the 'new atheism', this collection of essays brings recent research on religious movements into conversation with debates about socialisation, reflexivity and the changing capacity of social institutions to shape human identities. Contributors examine religion as an institutional context for the production of knowledge, as a form of knowledge to be transmitted or conveyed and as a social field in which controversies about knowledge emerge.

## Product-Focused Software Process Improvement

### 9th International Conference, PROFES 2008, Monte Porzio Catone, Italy, June 23-25, 2008, Proceedings

Springer Science & Business Media This book constitutes the refereed proceedings of the 9th International Conference on Product Focused Software Process Improvement, PROFES 2008, held in Monte Porzio Catone, Italy, in June 2008. The 31 revised full papers presented together with 4 reports on workshops and tutorials and 3 keynote addresses were carefully reviewed and selected from 61 submissions. The papers address different development modes, roles in the value chain, stakeholders' viewpoints, collaborative development, as well as economic and quality aspects. The papers are organized in topical sections on quality and measurement, cost estimation, capability and maturity models, systems and software quality, software process improvement, lessons learned and best practices, and agile software development.

## The Evolution of American Ecology, 1890-2000

JHU Press In the 1890s, several initiatives in American botany converged. The creation of new institutions, such as the New York Botanical Garden, coincided with radical reforms in taxonomic practice and the emergence of an experimental program of research on evolutionary problems. Sharon Kingsland explores how these changes gave impetus to the new field of ecology that was defined at exactly this time. She argues that the creation of institutions and research laboratories, coupled with new intellectual directions in science, were crucial to the development of ecology as a discipline in the United States. The main concern of ecology -- the relationship between organisms and environment -- was central to scientific studies aimed at understanding and controlling the evolutionary process. Kingsland considers the evolutionary context in which ecology arose, especially neo-Lamarckian ideas and the new mutation theory, and explores the relationship between scientific research and broader theories about social progress and the evolution of human civilization. By midcentury, American ecologists were leading the rapid development of ecosystem ecology. At the same time, scientists articulated a sharp critique of modern science and society in the postwar context, foreshadowing the environmental critiques of the 1960s. As the ecosystem concept evolved, so too did debates about how human ecology should be incorporated into the biological sciences. Kingsland concludes with an examination of ecology in the modern urban environment, reflecting on how scientists are now being challenged to overcome disciplinary constraints and produce innovative responses to pressing problems. The Evolution of American Ecology, 1890--2000 offers an innovative study not only of the scientific landscape in turn-of-the-century America, but of current questions in ecological science.

## The Evolution of Business Knowledge

Oxford University Press This book challenges much of the rhetoric about the role of knowledge in business. Although top managers hail knowledge and learning as the source of their competitive edge, the rich empirical studies presented in the book question this top-down perspective. It will make compelling reading for management academics and practitioners alike.

## Review of the Restructured Research and Analysis Programs of NASA's Planetary Science Division

National Academies Press The Research and Analysis (R&A) program managed by NASA's Planetary Science Division (PSD), supports a broad range of planetary science activities, including the analysis of data from past and current spacecraft; laboratory research; theoretical, modeling, and computational studies; geological and astrobiological fieldwork in planetary analog environments on Earth; geological mapping of planetary bodies; analysis of data from Earth- and space-based telescopes; and development of flight instruments and technology needed for future planetary science missions. The primary role of the PSD R&A program is to address NASA's strategic objective for planetary science and PSD's science goals. Recently, PSD reorganized the R&A program to provide better alignment with the strategic goals for planetary sciences. The major changes in the R&A program involved consolidating a number of prior program elements, many of which were organized by subdiscipline, into a smaller number of thematic core research program elements. Despite numerous efforts by PSD to communicate the rationale for the reorganization and articulate clearly the new processes, there has been significant resistance from the planetary science community and concerns in some sectors regarding the major realignment of funding priorities. Review of NASA's Planetary Science Division's Restructured Research and Analysis Programs examines the new R&A program and determines if it appropriately aligns with the agency's strategic goals, supports existing flight programs, and enables future missions. This report explores whether any specific research areas or subdisciplinary groups that are critical to NASA's strategic objectives for planetary science and PSD's science goals are not supported appropriately in the current program or have been inadvertently disenfranchised through the reorganization.

## Ethical Issues in Human Stem Cell Research: Commissioned papers

## Emerging International Issues in Student Affairs Research and Practice

IAP The editors of Emerging International Issues in Student Affairs Research and Practice situate developing issues in student affairs through research, new and emergent methodologies, pedagogies, and practices. The text aims to encourage intercultural perspectives and opportunities across student affairs research and practice, while calling upon international student affairs practitioners, faculty, and staff to engage in international evidence-based research that provides a foundation toward a collective consensus of the field. To accomplish these goals, the editors invited predominant practitioners in student affairs practice and student affairs scholars from across the globe to engage in discourse, share their insights, and offer implications to the student affairs profession at the international level. The editors do this by dividing the text into two parts: Part I: Theoretical, Historical, Cultural, and Ideological Considerations in International Student Affairs and Part II: Emergent International Issues and Practice in Student Affairs. In Part I, the text addresses larger contexts, theories, and frameworks for understanding some of the most recent concerns and issues that have surfaced among international higher education leaders, student affairs professionals, and scholars. The section highlights discourse on directions and praxis that relate to the internationalization of student affairs and the resulting implications. Part II amplifies the larger international issues that have recently surfaced through the context of student affairs practice. International scholars and practitioners share timely concerns and matters that influence the profession on a global scale. This section highlights specific ways that practitioners can think about their work moving forward and implications that can shape research and the profession in the future. Collectively, these chapters represent a snapshot in time. Written early in the third decade of the 21st century, they emerge from one of the most distinctive—and some would say, one of the most unrelenting and tragic—recent periods of human history. The confluence of the pandemic and other global issues is exerting extensive pressure on higher education in general and the practice of student affairs in specific. Consequently, sustained, significant change seems inevitable. As a text within the series, International Perspectives on Educational Policy, Research and Practice—a series that aids to be a leading forum for global discussion on educational issues, urgent problems, successful experiences, and reflections from educational researchers and practitioners around the world—the editors believe the text is both timely and consequential.

## Creating a Forestry for the 21st Century

## The Science Of Ecosystem Management

Island Press Over the past decade, a sea change has occurred in the field of forestry. A vastly increased understanding of how ecological systems function has transformed the science from one focused on simplifying systems, producing wood, and managing at the stand-level to one concerned with understanding and managing complexity, providing a wide range of ecological goods and services, and managing across broad landscapes. Creating a Forestry for the 21st Century is an authoritative and multidisciplinary examination of the current state of forestry and its relation to the emergent field of ecosystem management. Drawing upon the expertise of top professionals in the field, it provides an up-to-date synthesis of principles of ecosystem management and their implications for forest policy. Leading scientists, including Malcolm Hunter, Jr., Bruce G. Marcot, James K. Agee, Thomas R. Crow, Robert J. Naiman, John C. Gordon, R.W. Behan, Steven L. Yaffee, and many others examine topics that are central to the future of forestry: new understandings of ecological processes and principles, from stand structure and function to disturbance processes and the movement of organisms across landscapes challenges to long-held assumptions: the rationale for clearcutting, the wisdom of short rotations, the exclusion of fire traditional tools in light of expanded goals for forest landscapes managing at larger spatial scales, including practical information and ideas for managing large landscapes over long time periods the economic, organizational, and political issues that are critical to implementing successful ecosystem management and developing institutions to transform knowledge into action Featuring a 16-page center section with color photographs that illustrate some of the best on-the-ground examples of ecosystem management from around the world, Creating a Forestry for the 21st Century is the definitive text on managing ecosystems. It provides a compelling case for thinking creatively beyond the bounds of traditional forest resource management, and will be essential reading for students; scientists working in state, federal, and private research institutions; public and private forest managers; staff members of environmental/conservation organizations; and policymakers.

## EBOOK: Biology

McGraw Hill Committed to Excellence in the Landmark Tenth Edition. This edition continues the evolution of Raven & Johnson's Biology. The author team is committed to continually improving the text, keeping the student and learning foremost. We have integrated new pedagogical features to expand the students' learning process and enhance their experience in the ebook. This latest edition of the text maintains the clear, accessible, and engaging writing style of past editions with the solid framework of pedagogy that highlights an emphasis on evolution and scientific inquiry that have made this a leading textbook for students majoring in biology and have been enhanced in this landmark Tenth edition. This emphasis on the organizing power of evolution is combined with an integration of the importance of cellular, molecular biology and genomics to offer our readers a text that is student friendly and current. Our author team is committed to producing the best possible text for both student and faculty. The lead author, Kenneth Mason, University of Iowa, has taught majors biology at three different major public universities for more than fifteen years. Jonathan Losos, Harvard University, is at the cutting edge of evolutionary biology research, and Susan Singer, Carleton College, has been involved in science education policy issues on a national level. All three authors bring varied instructional and content expertise to the tenth edition of Biology.
