## Scholarly Ethics and Publishing: Breakthroughs in Research and Practice

### Breakthroughs in Research and Practice

IGI Global **A vital component of any publishing project is the ethical dimensions, which can refer to varied categories of practice: from conducting a proper peer review to using proper citation in research. With the implementation of technology in research and publishing, it is important for today's researchers to address the standards of scientific research and publishing practices to avoid unethical behavior. Scholarly Ethics and Publishing: Breakthroughs in Research and Practice is an essential reference source that discusses various aspects of ethical values in academic settings including methods and tools to prevent and detect plagiarism, strategies for the principled gathering of data, and best practices for conducting and citing research. It also assists researchers in navigating the field of scholarly publishing through a careful analysis of multidisciplinary research topics and recent trends in the industry. Highlighting a range of pertinent topics such as academic writing, publication process, and research methodologies, this publication is an ideal reference source for researchers, graduate students, academicians, librarians, scholars, and industry-leading experts around the globe.**

# The Future of the Public's Health in the 21st Century

National Academies Press **The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.**

## Law and Legacy in Medical Jurisprudence

### Essays in Honour of Graeme Laurie

Cambridge University Press **Graeme Laurie stepped down from the Chair in Medical Jurisprudence at the University of Edinburgh in 2019. This edited collection pays tribute to his extraordinary contributions to the field. Graeme often spoke about the importance of 'legacy' in academic work and forged a remarkable intellectual legacy of his own, notably through his work on genetic privacy, human tissue and information governance, and the regulatory salience of the concept of liminality. The essays in this volume animate the concept of legacy to analyse the study and practice of medical jurisprudence. In this light, legacy reveals characteristics of both benefit and burden, as both an encumbrance to and facilitator of the development of law, policy and regulation. The contributions reconcile the ideas of legacy and responsiveness and show that both dimensions are critical to achieve and sustain the health of medical jurisprudence**

itself as a dynamic, interdisciplinary and policy-engaged field of thinking.

## EBOOK: Research Methods in Health: Investigating Health and Health Services

McGraw-Hill Education (UK) **This bestselling book provides an accessible introduction to the concepts and practicalities of research methods in health and health services. This new edition has been extensively re-worked and expanded and now includes expanded coverage of: Qualitative methods Social research Evaluation methodology Mixed methods Secondary data analysis Literature reviewing and critical appraisal Evidence based practice Covering all core methodologies in detail the book looks at the following kinds of health research: health needs morbidity and mortality trends and rates costing health services sampling for survey research cross-sectional and longitudinal survey design**

experimental methods and techniques of group assignment questionnaire design interviewing techniques coding and analysis of quantitative data methods and analysis of qualitative observational studies unstructured interviewing The book is grounded in the author's career as a researcher on health and health service issues, and the valuable experience this has provided in meeting the challenges of research on people and organisations in real life settings. **Research Methods in Health, Fourth Edition** is an essential companion for students and researchers of health and health services, health clinicians and policy-makers with responsibility for applying research findings and judging the soundness of research. "Health service researchers - new and old - will be delighted by this new edition of a popular and useful text. There is new content but also updated material making this practically useful as a resource at any stage of the research trajectory. While health is the focus the book is hugely valuable to researchers in cognate areas, such as social care, education and housing. The book meets its own high standards in being easy to follow, well indexed and containing interesting examples of approaches. The limitations of different methods are also honestly reported. A 'must have' for the book shelf." Jill Manthorpe, Professor of Social Work, King's College London, UK "When first published in 1997, this volume was the first systematic overview of research methods used in the health field. In its updated 4th Edition it remains vital and, if anything, more important given the growing number of researchers and students investigating health issues and health services. It provides an impressively comprehensive overview of health research methods in which the wealth and variety of experience of the author shines through at every point. Qualitative, quantitative and mixed methods are appraised and explained with unpartisan authority and rigour, and the volume covers everything from multidisciplinary collaboration in health service evaluation through the Delphi technique of consensus development to the health economics needed to evaluate costing." Paul Stenner, Professor of Social Psychology, The Open University, UK "This excellent text really is a must for anyone involved in health research. It is truly multidisciplinary in its scope, drawing on a breadth of relevant research from health economics, to epidemiology to psychology which is beyond the scope of most books on research methods. Yet in spite of the wealth of material included it is written and presented in an accessible way so that it will be an invaluable source for those with a background in either qualitative or quantitative research and from students to experienced researchers." Robert J. Edelmann, Professor of Forensic and Clinical psychology, Roehampton University, UK **Reviews of previous editions:** "Provides an excellent broad based introduction to the subject. The content is clearly presented and at a suitable level for health professionals and postgraduate students in health and health-related social sciences." Virginia Berridge, London School of Hygiene and Tropical Medicine, UK "A valuable source book for health services researchers, health care providers, and others interested in quantifying quality of life for clinical or research purposes." The International

Journal for Quality in Health Care "Includes accounts of a number of recently developed scales, while retaining the breadth, concision and clarity that marked the first edition." Medicine, Healthcare and Philosophy

### Current Legal Issues Volume 14

OUP Oxford **Current Legal Issues**, like its sister volume **Current Legal Problems** (now available in journal format), is based upon an annual colloquium held at Univesity College London. Each year leading scholars from around the world gather to discuss the relationship between law and another discipline of thought. Each colloquium examines how the external discipline is conceived in legal thought and argument, how the law is pictured in that discipline, and analyses points of controversy in the use, and abuse, of extra-legal arguments within legal theory and practice. **Law and Childhood Studies**, the fourteenth volume in the **Current Legal Issues** series, offers an insight into the state of law and childhood studies scholarship today. Focussing on the inter-connections between the two disciplines, it addresses the key issues informing current debates.

### Psychology and Sociology Applied to Medicine E-Book

Elsevier Health Sciences **This textbook in the Illustrated Colour Text series offers an integrated treatment of sociology and psychology for medical students. It is presented in a much more colourful and graphic format than is usual for**

books on these two subjects. This integration reflects the tendency to teach these two subjects together as “behavioural science , with an increased stress on the place of medicine in society, and on illness as a product of psychological and social circumstances rather than merely a biological phenomenon. The book reflects these trends and has been successful and popular with students. An integrated treatment of psychology and sociology for medical students - in line with the trend towards teaching these subjects as “behavioural sciences“. Use of case studies and Stop/Think boxes encourages critical thinking and discussion. Graphic Illustrated Colour Text presentation style enlivens a subject which most medical students are not keen on. This third edition contains a new introduction on the importance and key features of the biopsychosocial model and additional double-page spreads on International Health and Rural Health.

### Handbook of Emergent Methods

Guilford Publications Social researchers increasingly find themselves looking beyond conventional methods to address complex research questions. This is the first book to comprehensively examine emergent qualitative and quantitative theories and methods across the social and behavioral sciences. Providing scholars and students with a way to retool their research choices, the volume presents cutting-edge approaches to data collection, analysis, and representation. Leading researchers describe alternative uses of traditional quantitative and qualitative tools; innovative hybrid or mixed methods; and new techniques facilitated by technological advances. Consistently formatted chapters explore the strengths and limitations of each method for studying different types of research questions and offer practical, in-depth examples.

## Dying to Count

## Post-Abortion Care and Global Reproductive Health Politics in Senegal

Rutgers University Press During the early 1990s, global health experts developed a new model of emergency obstetric care: post-abortion care or PAC. In developing countries with restrictive abortion laws and where NGOs relied on US family planning aid, PAC offered an apolitical approach to addressing the consequences of unsafe abortion. In *Dying to Count*, Siri Suh traces how national and global population politics collide in Senegal as health workers, health officials, and NGO workers strive to demonstrate PAC's effectiveness in the absence of rigorous statistical evidence that the intervention reduces maternal mortality. Suh argues that pragmatically assembled PAC data convey commitments to maternal mortality reduction goals while obscuring the frequency of unsafe abortion and the inadequate care women with complications are likely to receive if they manage to reach a hospital. At a moment when African women face the highest risk worldwide of death from complications related to pregnancy, birth, or abortion, Suh's ethnography of PAC in Senegal makes a critical contribution to studies of global health, population and development, African studies, and reproductive justice.
