The provision of out-of-hours care in England

Stationery Office The term 'out-of-hours care' refers to primary medical care services available from 6.30pm until 08.00am on weekdays, and on all weekends, bank holidays and public holidays. In April 2004 a new general medical services (GMS) contract came into force which allowed GPs to opt out of out-of-hours provision, with the responsibility for provision being taken up by primary care trusts (PCT), GP co-operatives, NHS Direct and private companies. Findings from this NAO report on the quality of out-of-hours services include that there were some shortcomings in the initial commissioning process because PCTs lacked the experience, time and reliable management data, and there was confusion over whether out-of-hours services should be restricted to urgent care. Providers are now beginning to deliver a satisfactory level of service in general, although most have not yet met all the national quality requirements, particularly in relation to speed of response. The costs of providing out-of-hours services in 2005-06, the first full year of the new arrangements, was £392 million, 22 per cent higher than that allocated by the Department of Health.

Critical Perspectives on the Management and Organization of Emergency Services

Routledge *Critical Perspectives in Emergency Services Management makes an important contribution to the subject of emergency services management and to public administration and organization studies more generally. It critically assesses developments in emergency services management by examining the multi-dimensional nature of the provision of emergency services and their connectedness in advanced western democracies. The effective management of emergency services has never been more important than in today's high-pressured and cost-conscious public sector. The authors of this volume forensically analyse the challenges of delivering emergency services within this context. This book provides an in-depth, scholarly and comprehensive analysis of the changing landscape of emergency service provision and clearly addresses a gap in the market for a critical volume on the emergency services. For anyone seeking to understand why and how the management of emergency services matters, this collection is essential reading.*

Managing Innovation in Healthcare

World Scientific Publishing Company *Across the world, the demands placed on health systems are growing rapidly. Developed countries face the challenge of providing services to an ageing population with changing health needs, while countries with developing health systems must find ways of ensuring their populations are provided with access to healthcare. Innovative thinking is essential to meet these twin challenges, but innovation is both a cause and cure of many struggles in healthcare — we need it, but it is hard to manage and the introduction of new technology can lead to higher costs. Using real-life examples and case studies from around the world, this book introduces the latest thinking on understanding and managing healthcare innovation more effectively. It does this from the perspective of governments responsible for shaping health policy, healthcare organisations providing services and juggling competing demands, and from the perspective of the industries that supply the new drugs, devices and other technologies. *Managing Innovation in Healthcare* is the perfect accompaniment for MSc, PhD and MBA students on health policy, management and public health courses, as well as managers, consultants and policy makers involved in healthcare services in both the public and private sector.*
