Governance, Globalization and Public Policy

Edward Elgar Publishing Governance, Globalization and Public Policy is concerned with exploring the nature of the policy arena in the context of globalization and the reconstitution of the state. The contributors to this book seek to broaden, extend and integrate theoretical, conceptual and substantive policy debates. The book begins by exploring the concepts and perspectives associated with globalization and governance, the relationship between them and the repercussions for public policy and the state. It also considers developments at the global and regional levels and the implications of the emergence of new regulatory regimes in the context of liberalization and privatization. The focus then turns to a broad range of substantive areas of public policy such as human rights, health and health care, housing markets, poverty, security and counter-terrorism. Together the chapters provide a thorough, integrated insight into the relationship between global processes, governance and public policy across a range of policy domains. Providing a comprehensive analysis of patterns and processes of governance in specific areas of public policy, this book will be of great interest to students undertaking programmes in social policy, social administration, public policy and political science, as well as

researchers and academics concerned with the policymaking process.

In What Ways Has Us Security Cooperation Programs Been Effective in Helping Kenya to Build Partnership Capacity to Counter Transnational Terrorism

Createspace Independent Pub This monograph uses Kenya as a case study to analyze the US Security Cooperation role and process in building host-nation capacity to meet the needs of Kenya to counter transnational terrorists' networks. US counterterrorism operations since 9/11 have explicitly demonstrated the US requirement to take an indirect approach to ensuring national security as part of an international community combating transnational terrorists' networks. In addition to capacity building, regional focus from all agencies with the US Government (USG) is required for a coordinated and effective approach in the GWOT. The United States began formal relations with Kenya in 1981 with air and port basing agreements. Kenya's strategic location facilitated access for stability and humanitarian operations in the western Indian Ocean and east Africa. The events of 9/11 highlighted the US requirement for security partners in combating transnational terrorists and Kenya became a central front on the Global War on Terror (GWOT) due to its

strategic location and willingness to ally. The partnership that started during the Cold War has carried on through to today's war on transnational terrorists. Kenya is one of the three "anchor states" in sub-Saharan Africa, along with Nigeria and South Africa, essential in stabilizing Africa. The program with Kenya focused on three general lines of effort to include foreign assistance, defense security cooperation and assistance programs, and counter-terrorism training programs. In general, all three have been effective for Kenya. In specifics, the lack of a coordinated regional USG effort reduced the effectiveness of on-going programs to counter the transnational threat in the region. The nature of capacity building and countering terrorism requires a long-term strategy. The requirement to get initial successes in short and mid-term are met through the Defense and Counter-Terrorism efforts. The success in these areas is due to tailoring these programs to the requirements of Kenya. Security assistance procedures have not progressed since the Cold War era, and as such, actions to assist building Kenya's security apparatus have met roadblocks. The current focus of the international community is the Middle East; Everything else is secondary. Conflicts in other regions of the world have not stopped, nor is there any indication of such action in the future. The limitations of what the US military can accomplish are real. The necessity of effective security cooperation programs to fight as part of the indirect approach to warfare is more relevant today than ever before to mitigate the requirement for armed interventions.

Protection of Civilian Infrastructure from Acts of Terrorism

Springer Science & Business Media This book arises from the NATO-Russia Workshop, and focuses on the creation of a risk-informed analysis capability for modeling and predicting the behavior of complex infrastructure networks; applying emerging technology to the problems of designing, constructing, monitoring, and operating critical infrastructure systems; and building an understanding of the social, economic, and environmental factors that affect, and are affected by, critical infrastructure.

Control Design of Multiagent Discrete-Time Systems

Springer Nature This book describes an effective approach to the cooperative and coordinated control of multivehicle systems. This rigorous analytic approach guarantees the stability of coordinated and cooperating vehicles using distributed protocols and uses low-energy, event-triggered mechanisms for networked vehicle control. The text covers: design of a cooperative protocol to achieve consensus for multivehicle systems, allowing cooperation that is resistant to the effects of packet loss and/or adversarial attack;

analysis and synthesis of an event-triggering mechanism for cooperative multivehicle systems over uncertain networks; and the problem of distributed leader-following consensus and methods for compelling multivehicle systems to reach consensus. Throughout the book, cooperation problems are transformed into stability problems. Lyapunov theory is used to guarantee cooperation among agents. The distributed approach is applied to triggering mechanisms, the cooperation process, and the impact of cyber-attacks. Discrete-time analysis shows how the event-based structure can be designed to match the performance of continuous-time counterparts. The book details applications and computer simulation with several practical examples. This book is of interest to a wide audience from the graduate student, through the academic researcher to the industrial practitioner, all of them sharing a common interest in the stability and security of multiagent systems.

Security Management for Sports and Special Events

An Interagency Approach to Creating Safe Facilities

Human Kinetics Though spectator and player security has always been a priority for sport and facility managers at all levels, large-scale threats such as terrorism or natural disasters have become even more critical management concerns. Proactive sport and facility managers understand the role they must take in working with local law enforcement, contracted security personnel, and their own employees to adequately plan for and respond to threats—both manmade and natural. Security Management for Sports and Special Events: An Interagency Approach to Creating Safe Facilities presents a systematic approach to stadium and venue security. Unlike traditional risk management books that present guidelines to promote safety and discourage litigation in sport and recreation settings, Security Management for Sports and SpecialEvents deals specifically with natural disasters, terrorism, crowd control problems, and other large-scale threats. As sport and facility managers seek to broaden their building management capabilities, this text offers detailed guidance in improving the quality, coordination, and responsiveness of security protocols within their facilities. With this text, sport and facility managers examine the concerns and challenges to security and emergency planning for both sport and non-sport events held at their facilities. Security Management for Sports and Special Events offers an organized explanation of event security to support the planning, implementation, and communication of security and emergency plans to staff and game-day hires as well as the assessment of emergency preparation. Drawing on numerous examples from both in and out of sport, readers will consider the challenges, solutions, best practices, and prescriptions for coordinating the efforts of staff, law enforcement, and security personnel. Readers will find an array of tools that assist in understanding and implementing the material presented: •Case studies at the end of each chapter and "Lessons Learned" sections that summarize and apply the information to a real-world scenario •Chapter goals and application questions that provide a clear map for the chapter and promote critical thinking of the issues •Sidebars

throughout the text that provide examples of important current issues in sport and event security management •Reproducible checklists, forms, and additional resources that help in designing and implementing plans •More than 20 appendix items, including key guidelines, checklists, and needs assessments Emphasizing interagency development and a team approach to sport event security management, Security Managementfor Sports and Special Events allows sport and facility managers to lessen risk, control insurance costs, and uphold the integrity of their facilities through security management procedures. The text is developed according to the requirements of the Department of Homeland Security's National Incident Management System (NIMS) and serves as the manual for managers seeking to achieve the SESA Seal of Approval offered by the University of Southern Mississippi's National Center for Spectator Sports Safety and Security (NCS4). Developed by the authors and the only dedicated research facility for sport security management, NCS4 is on the cutting edge of researching and assessing game-day operations for security and crisis management. Security Management for Sports and Special Events is a practical resource for identifying and managing potential threats to fans' and players' safety. With proper protocols in place and a coordinated response, sport and facility professionals can ensure the safety of participants and spectators from terrorism, natural disasters, and other potential encounters.

Independent External Evaluation of the European

Agency for the Operational Management of Large-scale IT Systems in the Area of Freedom, Security and Justice - Eu-LISA

Final Evaluation Report

The European Agency for the operational management of large-scale IT systems in the area of freedom, security and justice (eu-LISA) was established by Regulation (EU) No 1077/2011 and became operational on 1 December 2012 The Evaluation examined the way and the extent to which eu-LISA effectively contributes to the operational management of large-scale IT systems in the area of freedom, security and justice and fulfils its tasks laid down in the Regulation and new tasks entrusted to it. It also examined the Agency's contribution to the establishment of a coordinated, effective and coherent IT environment for the management of large-scale IT systems supporting the implementation of JHA policies. The report presents the findings of the External Evaluation of the action of eu-LISA since its establishment. It confirmed that the Agency contributes to the operational management of large-scale IT systems in the area of freedom, security and justice and effectively fulfils its tasks laid down in the Regulation as well as new tasks entrusted to it. It also found that by bringing the management of the three systems together, the Agency was able to pool resources and ensure a more consistent approach, thus contributing to the establishment of a more coordinated, effective and coherent IT environment for the management of large-scale IT systems supporting the implementation of JHA policies . To enable the adaptation of the Agency's current mandate to ensure that it meets current challenges at EU level in the area of migration and security, the Evaluation identified the possible need for revision of, or extension of, the tasks entrusted to eu-LISA in the establishing Regulation and other relevant legal instruments.

Botnets

Springer Science & Business Media Malware poses one of the major threats to all currently operated computer systems. The scale of the problem becomes obvious by looking at the global economic loss caused by different kinds of malware, which is estimated to be more than US$ 10 billion every year. Botnets, a special kind of malware, are used to reap economic gains by criminals as well as for politically motivated activities. In contrast to other kinds of malware, botnets utilize a hidden communication channel to receive commands from their operator and communicate their current status. The ability to execute almost arbitrary commands on the infected machines makes botnets a general-purpose tool to perform malicious cyber-activities. Botnets provides a comprehensive analysis of the topic, and comprises both technical and non-technical sections written by leading cybersecurity experts. The non-technical section addresses how botnet infrastructure could be exploited for national security and cybercrime purposes. It approaches the subject as a public policy issue and analyzes the phenomenon of botnets from national security, law enforcement and regulatory policy perspectives, and makes recommendations for policy-makers on different public policies, highlighting the need for international response mechanisms. The technical section provides insight into current botnet techniques and discusses state-of-the-art countermeasures to combat the botnet threat in detail. It includes new detection methods as well as different approaches to actively compromise running botnets.

Defence and Security Sector Governance and Reform in South East Europe

Regional Perspectives

Nomos Verlagsgesellschaft Mbh & Company This volume analyzes the Stability Pact South East Europe Self-Assessment Studies with the three-fold aim of enhancing the relevance of the original papers, examining their findings for the benefit of local, national, regional and international decision-makers, and preparing the ground for a possible more comprehensive phase of the Stock-Taking Programme. Western and regional contributors were asked to assess the quality of the papers, address any omissions, add contextual information they perceived to be relevant, and, on the basis of those findings, make constructive suggestions and recommendations
