Humanity in a Creative Universe

Oxford University Press Much of Stuart Kauffman's work in the philosophy of evolutionary biology has centered on the question of what he calls "prestatibility" in evolution: that is, whether or not science can precisely predict the future development of biological features in organisms, using a singular "Final Theory" of evolution. In this book, Kauffman argues that the development of life on earth is not prestatable, because no theory could ever fully account for the limitless variability of evolution. He believes that the biological universe's primary trait is that it is creative, and that acknowledging this creativity will lead to a radically different way in which humans view themselves and all other living beings. It is an argument against Reductive Materialism. Kauffman also asserts that man's Modern preoccupation to explain all things with scientific law has deadened our creative natures. In his words, he aims for the book to be "one that revises our scientific world view of the universe as entirely entailed by law." Instead, he advocates an approach to science that accounts for "unprestatable" creativity, thus allowing humans to fully realize their creative selves. The book will build off the ideas developed in his last two works, Reinventing the Sacred and Investigations. Incorporating philosophers like Kant and Descartes, as well as the science of Newton and Darwin, Humanity in a Creative Universe is Stuart Kauffman's argument for a creative and unpredictable view of modern science.

Living in the Environment: Principles, Connections, and Solutions

Cengage Learning Sustainability is the integrating theme of this current and thought-provoking book. LIVING IN THE ENVIRONMENT provides the basic scientific tools for understanding and thinking critically about the environment. Co-authors G. Tyler Miller and Scott Spoolman inspire students to take a positive approach toward finding and implementing useful environmental solutions in their own lives and in their careers. Updated with the most up-to-date information, art, and Good News examples, the text engages and motivates students with vivid case studies and hands-on quantitative exercises. The concept-centered approach transforms complex environmental topics and issues into key concepts that students will understand and remember. Overall, by framing the concepts with goals for more sustainable lifestyles and human communities, students see how promising the future can be. Introducing Ken Wilber

Concepts for an Evolving World

AuthorHouse Ken Wilber's revolutionary thinking is beginning to shift the orientation of Western culture. Wilber combines his knowledge as mystic, scientist, psychologist and philosopher to create comprehensive concepts for understanding our world and our place in it. This integral approach is much needed in a world torn by conflicts of religion, culture, and ideology. Lew Howard says, I wrote this book to make the work of Ken Wilber accessible to the average person. Wilber's integral understanding (which is an interlocking whole) is broken down into concepts that can be individually understood. These understandings result in an integral conception of the Kosmos. Wilber's insights revolutionized my spiritual practice and can do the same for you.

Uranium · Plutonium Transplutonic Elements

Springer Science & Business Media More than a year ago the three editors sat down at a table and worked out a set of six chapter headings which they believed might serve, in turn, for each of the three sections of this handbook. (The reader will note a similarity in order of presentation and in emphasis.) However, as our editorial plans progressed it became apparent that for each element and for the element group, there were one or two special topics appropriate for that section alone. Accordingly, in the section on uranium the common pattern holds for Chaps. 1 through 6 which include: an introduction (Chap. 1), a discussion of the physical and chemical properties (Chap. 2), experimental data on animals (Chap. 3), experimental data on man (Chap. 4), the rationale and development of air concentration limits to control industrial worker exposure (Chap. 5), and the practical problems of applying such limits in the uranium industry (Chap. 6). Chap. 7 entitled "Uranium Mining Hazards" is the subject category which is special for uranium; the chapter brings up to date the account of an important occupational hazard which was first noted by GEORGIUS AGRICOLA (1490-1555).

A Climate Modelling Primer

John Wiley & Sons As a consequence of recent increased awareness of the social and political dimensions of climate, many non-specialists discover a need for information about the variety of available climate models. A Climate Modelling Primer, Third Edition explains the basis and mechanisms of all types of current physically-based climate models. A thoroughly revised and updated edition, this book assists the reader in understanding the complexities and applicabilities of today's wide range of climate models. Topics covered include the latest techniques for modelling the coupled biosphere-ocean-atmosphere system, information on current practical aspects of climate modelling and ways to evaluate and exploit the results, discussion of Earth System Models of Intermediate Complexity (EMICs), and interactive exercises based on Energy Balance Model (EBM) and the Daisyworld model. Source codes and results from a range of model types allows readers to make their own climate simulations and to view the results of the latest high resolution models. The accompanying CD contains: A suite of resources for those wishing to learn more about climate modelling. A range of model visualisations. Data from climate models for use in the classroom. Windows and Macintosh programs for an Energy Balance Model. Selected figures from the book for inclusion in presentations and lectures. Suitable for 3rd/4th year undergraduates taking courses in climate modelling, economic forecasting, computer science, environmental science, geography and oceanography. Also of relevance to researchers and professionals working in related disciplines with climate models or who need accessible technical background to climate modelling predictions.
