#### **SECOND EDITION**

*Hampton Roads Publishing Chelation therapy, based on the intravenous infusion of EDTA, is a highly effective treatment for atherosclerotic cardiovascular disease. Safety and effectiveness are well documented in clinical studies, all of which to date are supportive of this therapy, and there are no studies showing lack of effectiveness. A strong case is made for the use of this safe, efficacious, and inexpensive therapy before resorting to surgery and other risky and invasive treatments. In this newly revised and extensively updated edition of what has come to be regarded as the definitive textbook on the subject, renowned chelation expert Elmer M. Cranton, M.D., presents the work of the world's leading experts in chelation therapy. "This therapy has been proven effective over and over again in clinical practice," says Dr. Cranton. "More than one million patients have received more than twenty million infusions with no serious or lasting adverse effects." In his foreword, Nobel Prize winner Dr. Linus Pauling states, "EDTA chelation therapy makes good sense to me as a chemist and medical researcher. It has a rational scientific basis, and the evidence for clinical benefit seems to be quite strong." Here in a single volume you will learn everything you need to know to responsibly administer and advocate chelation therapy. You will find a coherent scientific rationale, clinical trials demonstrating effectiveness, guidelines for safety, detailed protocols for administration, and techniques for pre- and post-treatment laboratory evaluation.*

Chelation therapy works in all the arteries at once, it's much safer, and is much less expensive.*

Dr. Elmer Cranton's compilation of the most current and pertinent information on EDTA chelation therapy is now back in print, with even more information about chelation's effects, protocols, and status based on the latest research. Find out why more than a thousand physicians in the United States already offer EDTA chelation therapy as a safer and far less expensive alternative to surgical treatments for atherosclerosis.*

## **AGING AND HUMAN LONGEVITY**

---

*Springer Science & Business Media The proportion of elderly people continues to increase in the western world-nearly a quarter of the population will be over 65 years by the year 2050. Since aging is accompanied by an increase in diseases and by a deterioration in well-being, finding solutions to these social, medical and psychological problems is necessarily a major goal for society. Scientists and medical practitioners are therefore faced with the urgent task of increasing basic knowledge of the biological processes that cause aging. More resources must be put into this research in order to achieve better understanding of the cellular mechanisms that underlie the differences in life span between species and to answer the difficult questions of why some individuals age more quickly than others, and why some develop liver problems, some have heart problems, and others brain problems. The results of such a wide program of research will provide important information about the causes of many life-threatening and/ or debilitating diseases of old age; it will help find ways to prevent some of the ailments that result from aging, and it may well lead to discoveries enabling the prolongation of human life.*

**ON THE WAY TOWARDS INTEGRATION? : A COMPARATIVE LEGAL ANALYSIS IN WESTERN COUNTRIES**

---

*Peter Lang During the past few decades, alternative medicines have gained increasing importance in Western countries. This book is the first extensive, comparative and interdisciplinary study on the subject. The recent evolution of these alternative techniques is considered from the perspective of their integration into Western medical systems. The first part of the research is an overview of the current position of alternative medicines in some Western countries. Sociological elements as well as various research and educational issues are presented. The study then focuses on the licensing to practise alternative medicine and the coverage of alternative medicines. The second part of the study analyses and compares the most important regulatory mechanisms. Proposals are also made for the regulation of alternative medicines. The last chapter deals with the concept of an integrated system of medicine. The main components of the system are presented and compared to current trends and a theoretical model. Moreover, the book addresses the questions: What is an integrated system of medicine? Are we moving towards such a system? If so, what are the reasons and is such a shift reasonable and feasible?*
