Free Culture

Lulu Press, Inc **Lawrence Lessig, "the most important thinker on intellectual property in the Internet era", masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers- that-be been able to exert such**

control over what we can and can't do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.

Chernobyl: A Stalkers' Guide

Fuel **Drawing on unprecedented access to the Chernobyl Exclusion Zone--including insights gained while working as a tour guide and during an illegal "stalker" hike--Darmon Richter creates an entirely new portrait of Chernobyl's forgotten ghost towns, monuments and more Since the first atomic bomb was dropped, humankind has been haunted by the idea of nuclear apocalypse. That nightmare almost became reality in 1986, when an accident at the USSR's Chernobyl Nuclear Power Plant triggered the world's worst radiological crisis. The events of that night are well documented--but history didn't stop there. Chernobyl, as a place, remains very much alive today. More than a quarter of a million tourists visited the Zone over the last few years, while millions more watched the acclaimed 2019 HBO mini-series Chernobyl. In Chernobyl: A Stalkers' Guide, researcher Darmon Richter journeys into the contemporary Exclusion Zone, venturing deeper than any previously published account. While thousands of foreign visitors congregate around a handful of curated sites, beyond the tourist hotspots lies a wild and mysterious land the size of a small country. In the forests of Chernobyl, historic village settlements and Soviet-era utopianism have lain abandoned since the time of the disaster--**

overshadowed by vast, unearthly megastructures designed to win the Cold War. Richter combines photographs of discoveries made during his numerous visits to the Zone with the voices of those who witnessed history--engineers, scientists, police and evacuees. He explores evacuated regions in both Ukraine and Belarus, finding forgotten ghost towns and Soviet monuments lost deep in irradiated forests, gains exclusive access inside the most secure areas of the power plant itself, and joins the "stalkers" of Chernobyl as he sets out on a high-stakes illegal hike to the heart of the Exclusion Zone.

Real local and international examples bring ideas to life and new feature 'linking the concepts' helps students test and consolidate understanding as they go. The latest edition enhances understanding with a unique learning design including revised, integrative concept maps at the start of each chapter, end-of-chapter features summarising ideas and themes, a mix of mini and major case studies to

illuminate concepts, and critical thinking exercises for applying skills.

Smarter Faster Better

The Secrets of Being Productive in Life and Business

Random House **In the international bestseller The Power of Habit, Pulitzer Prize-winning journalist Charles Duhigg explained why we do what we do. In Smarter Faster Better, he applies the same relentless curiosity, rigorous reporting and rich storytelling to explain how we can get better at the things we do. The result is a groundbreaking exploration of the science of productivity. A group of data scientists at Google embark on a four-year study of how the best teams function, and find that how a group interacts is much more important than who is in the group. A Marine Corps general, faced with low morale among recruits, reimagines boot camp - and discovers that instilling a 'bias toward action' can turn even the most directionless teenagers into self-motivating achievers. The filmmakers behind Disney's Frozen are on the brink of catastrophe - until they shake up their team in just the right way, spurring a creative breakthrough that leads to one of the highest-grossing movies of all time. What do these people have in common? They know that productivity relies on making certain choices. The way we frame our daily decisions; the big ambitions we embrace and the easy goals we ignore; the cultures we establish as leaders to drive innovation: these are the things that separate the merely busy from the genuinely productive. At the core of Smarter Faster Better are eight key concepts - from motivation and goal-setting to focus and decision-making - that explain why some people and companies get so much done. Drawing on the latest findings in neuroscience, psychology and behavioural eco�nomics - as well as the experiences of CEOs, educational reformers, four-star generals, air�plane pilots and Broadway songwriters - this painstakingly researched book explains that the most productive people, companies and organizations don't merely act differently. They view the world, and their choices, in profoundly different ways.**

Lithium-ion Batteries

A Machine-generated Summary of Current Research

"This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research. This book explores future ways of informing researchers and professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. This book summarizes more than 150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology."--Publisher's website.
