## **ENVIRONMENTAL GERONTOLOGY**

---

### **WHAT NOW?**

---

Routledge Environmental gerontology - the research on aging and environment - evolved during the late 1960s, when the domain became a relevant topic due to societal concerns with the problems of housing for elderly people. The field proliferated during the 1970s and 1980s, and remains viable and active today on an international scale. However, in recent times, the viability of the field and its future has been brought into question. In this volume, international experts across diverse areas reflect on the current progress of their respective disciplines, illustrating research-grounded benefits emerging from their work, and suggesting new agenda that can guide progress in the future. The contributors address a wide range of issues, including: evaluation of existing paradigms and new theories that might advance both research and training; issues and applications in methods, measures, and empirically-generated research agenda; innovative approaches to environmental transformations in home, community, and long-term care settings; and understudied populations and issues in environmental gerontology. This book was originally published as a special issue of the Journal of Housing for the Elderly.

Believers must develop convictions based on research, reason, and biblical truth--and be able (and willing) to communicate these convictions with a love and respect that reflects God's own heart. In Culture Shock, bestselling author, pastor, and radio personality Chip Ingram shows readers how they can bring light rather than heat to the most controversial and divisive issues of our day. ## **CULTURE MATTERS**

---

---

### **INTERNATIONAL RESEARCH COLLABORATION IN A CHANGING WORLD-SUMMARY OF A WORKSHOP**

---

National Academy Press In an increasingly interconnected world, science and technology research often transects international boundaries and involves researchers from multiple nations. This paradigm provides both new opportunities and new challenges. As science and technology capabilities grow around the world, United States-based organizations are finding that international collaborations and partnerships provide unique opportunities to enhance research and training. At the same time, enhancing international collaboration requires recognition of differences in culture, legitimate national security needs, and critical needs in education and training. "Culture Matters" is the summary of a workshop convened by the Government-University-Industry Research Roundtable (GUIRR) in July 2013 to address how culture and cultural perception influence and impact the process by which research agreements are made and negotiated across international boundaries. In this workshop, "Culture Matters: An Approach to International Research Agreements," representatives from around the world and from GUIRR's three constituent sectors - government, university, and industry - gathered to provide input into four specific meeting tracks or domains. The tracks focused on research and agreements affecting or involving people/human subjects; environmental and natural resources; science, engineering, and manufacturing; and agriculture and animal issues. This report examines each of these domains and the role that culture and cultural expectations may have in the forging and implementation of international research agreements.
